Definition of the CIDOC Conceptual Reference Model

Introduction

This document is the formal definition of the **CIDOC Conceptual Reference Model (“CRM”)**, a formal ontology intended to facilitate the integration, mediation and interchange of heterogeneous cultural heritage information. The CRM is the culmination of more than a decade of standards development work by the International Committee for Documentation (CIDOC) of the International Council of Museums (ICOM). Work on the CRM itself began in 1996 under the auspices of the ICOM-CIDOC Documentation Standards Working Group. Since 2000, development of the CRM has been officially delegated by ICOM-CIDOC to the CIDOC CRM Special Interest Group, which collaborates with the ISO working group ISO/TC46/SC4/WG9 to bring the CRM to the form and status of an International Standard.

Objectives of the CIDOC CRM

The primary role of the CRM is to enable information exchange and integration between heterogeneous sources of cultural heritage information. It aims at providing the semantic definitions and clarifications needed to transform disparate, localised information sources into a coherent global resource, be it within a larger institution, in intranets or on the Internet.

Its perspective is supra-institutional and abstracted from any specific local context. This goal determines the constructs and level of detail of the CRM.

More specifically, it defines and is restricted to the **underlying semantics** of database schemata and document **structures** used in cultural heritage and museum documentation in terms of a formal ontology. It does **not** define any of the **terminology** appearing typically as data in the respective data structures; however it foresees the characteristic relationships for its use. It does **not** aim at proposing what cultural institutions **should** document. Rather it explains the logic of what they actually currently document, and thereby enables **semantic interoperability**.

It intends to provide an optimal analysis of the intellectual structure of cultural documentation in logical terms. As such, it is not optimised to implementation-specific storage and processing aspects. Rather, it provides the means to understand the effects of such optimisations to the semantic accessibility of the respective contents.

The CRM aims to support the following specific functionalities:

- Inform developers of information systems as a guide to good practice in conceptual modelling, in order to effectively structure and relate information assets of cultural documentation.
- Serve as a common language for domain experts and IT developers to formulate requirements and to agree on system functionalities with respect to the correct handling of cultural contents.
- To serve as a formal language for the identification of common information contents in different data formats; in particular to support the implementation of automatic data transformation algorithms from local to global data structures without loss of meaning. The latter being useful for data exchange, data migration from legacy systems, data information integration and mediation of heterogeneous sources.
- To support associative queries against integrated resources by providing a global model of the basic classes and their associations to formulate such queries.
- It is further believed, that advanced natural language algorithms and case-specific heuristics can take significant advantage of the CRM to resolve free text information into a formal logical form, if that is regarded beneficial. The CRM is however not thought to be a means to replace scholarly text, rich in meaning, by logical forms, but only a means to identify related data.

Users of the CRM should be aware that the definition of data entry systems requires support of community-specific terminology, guidance to what should be documented and in which sequence, and application-specific consistency controls. The CRM does not provide such notions.

By its very structure and formalism, the CRM is extensible and users are encouraged to create extensions for the needs of more specialized communities and applications.

Scope of the CIDOC CRM

The overall scope of the CIDOC CRM can be summarised in simple terms as the curated knowledge of museums.

However, a more detailed and useful definition can be articulated by defining both the Intended Scope, a broad and maximally-inclusive definition of general application principles, and the Practical Scope, which is expressed by the overall scope of a reference set of specific identifiable museum documentation standards and practices that the CRM aims to encompass, however restricted in its details to the limitations of the Intended Scope.

The Intended Scope of the CRM may be defined as all information required for the exchange and integration of heterogeneous scientific documentation of museum collections. This definition requires further elaboration:

- The term “scientific documentation” is intended to convey the requirement that the depth and quality of descriptive information that can be handled by the CRM should be sufficient for serious academic research. This does not mean that information intended for presentation to members of the general public is excluded, but rather that the CRM is intended to provide the level of detail and precision expected and required by museum professionals and researchers in the field.
- The term “museum collections” is intended to cover all types of material collected and displayed by museums and related institutions, as defined by ICOM¹. This includes collections, sites and monuments relating to fields such as social history, ethnography, archaeology, fine and applied arts, natural history, history of sciences and technology.
- The documentation of collections includes the detailed description of individual items within collections, groups of items and collections as a whole. The CRM is specifically intended to cover contextual information: the historical, geographical and theoretical background that gives museum collections much of their cultural significance and value.
- The exchange of relevant information with libraries and archives, and the harmonisation of the CRM with their models, falls within the Intended Scope of the CRM.
- Information required solely for the administration and management of cultural institutions, such as information relating to personnel, accounting, and visitor statistics, falls outside the Intended Scope of the CRM.

The Practical Scope² of the CRM is expressed in terms of the current reference standards for museum documentation that have been used to guide and validate the CRM’s development. The CRM covers the same domain of discourse as the union of these reference standards; this means that data correctly encoded according to any of these museum documentation standards can be expressed in a CRM-compatible form, without any loss of meaning.

Compatibility with the CRM

Users intending to take advantage of the semantic interoperability offered by the CRM may want to make parts of their data structures compatible with the CRM. The respective parts should pertain either to the associations by which users would like their data to be accessible in an integrated environment, or to contents intended for transport to other environments, so that the meaning encoded by its structure is preserved in another target system.

In that sense, the CRM is not aimed at proposing a complete matching of user documentation structures with the CRM, nor that a user should always implement all CRM concepts and associations; rather it is intended to leave room for all kinds of extensions to capture the richness of cultural information, but also for simplifications for reasons of economy.

Further, the CRM is a means to interpret structured information in a way, so that large amounts of data contents can be transformed or mediated automatically. As a consequence, the CRM aims not at resolving free text information into a formal logical form. In other terms, it does not intend to provide more structuring than the users have done before, and free text information does not fall under the scope of compatibility considerations.

¹ The ICOM Statutes provide a definition of the term “museum” at <http://icom.museum/statutes.html#2>

² The Practical Scope of the CIDOC CRM, including a list of the relevant museum documentation standards, is discussed in more detail on the CIDOC CRM website at <http://cidoc.ics.forth.gr/scope.html>

The CRM foresees however the associations to transport such information in relation to structured information. The CRM is a formal ontology, expressible in terms of logic or a suitable knowledge representation language. Its concepts can be instantiated as sets of statements that form models of the assumed reality referred to in a structured document. Any encoding of CRM instances in a formal language that preserves the relations to the CRM classes, properties and inheritance rules among them is regarded a “CRM-compatible form”.

A part of a documentation structure is compatible with the CRM, if a deterministic logical algorithm can be found, that transforms any data correctly encoded in this structure into a CRM-compatible form without loss of meaning. No assumptions are made about the nature of this algorithm. It may in particular draw on other formal ontologies expressing background knowledge such as thesauri. The algorithm itself can only be found and verified intellectually by understanding the meaning intended by the designer of the data structure and the CRM concepts. By the term “correctly encoded” we mean that the data are encoded so that the meaning intended by the designer of the data structure is correctly applied to the intended meaning of the data.

Information system implementers may choose to provide **export** facilities of selected data into a CRM-compatible form. They may further choose to provide a service to **access** selected data by querying with CRM concepts. It is not regarded a loss of compatibility, if certain subclasses and subproperties of the CRM are not supported in such a service. In that case it is regarded essential that the services publishes the set of CRM concepts it supports.

Applied Form

The CRM is an ontology in the sense used in computer science. It has been expressed as an object-oriented semantic model, in the hope that this formulation will be comprehensible to both documentation experts and information scientists alike, while at the same time being readily converted to machine-readable formats such as RDF Schema, KIF, DAML+OIL, OWL, STEP, etc. It can be implemented in any Relational or object-oriented schema. CRM instances can also be encoded in RDF, XML, DAML+OIL, OWL and others.

Although the definition of the CRM provided here is complete, it is an intentionally compact and concise presentation of the CRM's 81 classes and 132 unique properties. It does not attempt to articulate the inheritance of properties by subclasses throughout the class hierarchy (this would require the declaration of several thousand properties, as opposed to 132). However, this definition does contain all of the information necessary to infer and automatically generate a full declaration of all properties, including inherited properties.

Terminology

The following definitions of key terminology used in this document are provided both as an aid to readers unfamiliar with object-oriented modelling terminology, and to specify the precise usage of terms that are sometimes applied inconsistently across the object oriented modelling community for the purpose of this document. Where applicable, the editors have tried to consistently use terminology that is compatible with that of the Resource Description Framework (RDF)³, a recommendation of the World Wide Web Consortium. The editors have tried to find a language which is comprehensible to the non-computer expert and precise enough for the computer expert so that both understand the intended meaning.

Class A class is a category of items that share one or more common traits serving as criteria to identify the items belonging to the class. These **properties** need not be explicitly formulated in logical terms, but may be described in a text (here called a **scope note**) that refers to a common conceptualisation of domain experts. The sum of these traits is called the **intension** of the class. A class may be the **domain** or **range** of none, one or more properties formally defined in a model. The formally defined properties need not be part of the intension of their domains or ranges: such properties are optional. An item that belongs to a class is called an **instance** of this class. A class is associated with an open set of real life instances, known as the **extension** of the class. Here “open” is used in the sense that it is generally beyond our capabilities to know all instances of a class in the world and indeed that the future may bring new instances about at any time (**Open World**). Therefore a class cannot be defined by enumerating its instances. A class plays a role analogous to a

³ Information about the Resource Description Framework (RDF) can be found at <http://www.w3.org/RDF/>

grammatical noun, and can be completely defined without reference to any other construct (unlike properties, which must have an unambiguously defined domain and range). In some contexts, the terms individual class, entity or node are used synonymously with class.

For example:

Person is a class. To be a Person may actually be determined by DNA characteristics, but we all know what a Person is. A Person may have the property of being a member of a Group, but it is not necessary to be member of a Group in order to be a Person. We shall never know all Persons of the past. There will be more Persons in the future.

subclass

A subclass is a **class** that is a specialization of another class (its **superclass**). Specialization or the IsA relationship means that:

1. all **instances** of the subclass are also instances of its superclass,
2. the **intension** of the subclass extends the intension of its superclass, i.e. its traits are more restrictive than that of its superclass and
3. the subclass inherits the definition of all of the **properties** declared for its superclass without exceptions (**strict inheritance**), in addition to having none, one or more properties of its own.

A subclass can have more than one immediate superclass and consequently inherits the properties of all of its superclasses (**multiple inheritance**). The IsA relationship or specialization between two or more classes gives rise to a structure known as a class hierarchy. The IsA relationship is transitive and may not be cyclic. In some contexts (e.g. the programming language C++) the term derived class is used synonymously with subclass.

For example:

Every Person IsA Biological Object, or Person is a subclass of Biological Object.

Also, every Person IsA Actor. A Person may die. However other kinds of Actors, such as companies, don't die (c.f. 2).

Every Biological Object IsA Physical Object. A Physical Object can be moved. Hence a Person can be moved also (c.f. 3).

superclass

A superclass is a **class** that is a generalization of one or more other classes (its **subclasses**), which means that it subsumes all **instances** of its subclasses, and that it can also have additional instances that do not belong to any of its subclasses. The **intension** of the superclass is less restrictive than any of its subclasses. This subsumption relationship or generalization is the inverse of the IsA relationship or specialization.

In some contexts (e.g. the programming language C++) the term parent class is used synonymously with superclass.

For example:

“Biological Object subsumes Person” is synonymous with “Biological Object is a superclass of Person”. It needs fewer traits to identify an item as a Biological Object than to identify it as a Person.

intension

The intension of a **class** or **property** is its intended meaning. It consists of one or more common traits shared by all **instances** of the class or property. These traits need not be explicitly formulated in logical terms, but may just be described in a text (here called a **scope note**) that refers to a conceptualisation common to domain experts. In particular the so-called **primitive** concepts, which make up most of the CRM, cannot be further reduced to other concepts by logical terms.

extension

The extension of a **class** is the set of all real life **instances** belonging to the class that fulfil the criteria of its **intension**. This set is “open” in the sense that it is generally beyond our capabilities to know all instances of a class in the world and indeed that the future may bring new instances about at any time (**Open World**). An information system may at any point in time refer to some instances of a class, which form a subset of its extension.

scope note

A scope note is a textual description of the **intension** of a **class** or **property**.

Scope notes are not formal modelling constructs, but are provided to help explain the

intended meaning and application of the CRM's classes and properties. Basically, they refer to a conceptualisation common to domain experts and disambiguate between different possible interpretations. Illustrative example **instances** of classes and properties are also regularly provided in the scope notes for explanatory purposes.

instance An instance of a **class** is an item that has the traits that match the criteria of the **intension** of the class.
For example:
The painting known as the “The Mona Lisa” is an instance of the class Physical Man Made Object.

An instance of a **property** is a factual relation between an instance of the **domain** and an instance of the **range** of the property that matches the criteria of the **intension** of the property.

For example:
“The Louvre *is current owner of* The Mona Lisa” is an instance of the property “*is current owner of*”.

property A property serves to define a relationship of a specific kind between two **classes**. The property is characterized by an **intension**, which is conveyed by a **scope note**. A property plays a role analogous to a grammatical verb, in that it must be defined with reference to both its **domain** and **range**, which are analogous to the subject and object in grammar (unlike classes, which can be defined independently). It is arbitrary, which class is selected as the domain, just as the choice between active and passive voice in grammar is arbitrary. In other words, a property can be interpreted in both directions, with two distinct, but related interpretations. Properties may themselves have properties that relate to other classes (This feature is used in this model only in order to describe dynamic subtyping of properties). Properties can also be specialized in the same manner as classes, resulting in IsA relationships between **subproperties** and their **superproperties**.
In some contexts, the terms attribute, reference, link, role or slot are used synonymously with property.

For example:
“Physical Man-Made Thing *depicts* CRM Entity” is equivalent to “CRM Entity *is depicted by* Physical Man-Made Thing”.

subproperty A subproperty is a **property** that is a specialization of another property (its **superproperty**). Specialization or IsA relationship means that:

1. all **instances** of the subproperty are also instances of its superproperty,
2. the **intension** of the subproperty extends the intension of the superproperty, i.e. its traits are more restrictive than that of its superproperty,
3. the **domain** of the subproperty is the same as the domain of its superproperty or a **subclass** of that domain,
4. the **range** of the subproperty is the same as the range of its superproperty or a subclass of that range,
5. the subproperty inherits the definition of all of the properties declared for its superproperty without exceptions (**strict inheritance**), in addition to having none, one or more properties of its own.

A subproperty can have more than one immediate superproperty and consequently inherits the properties of all of its superproperties (**multiple inheritance**). The IsA relationship or specialization between two or more properties gives rise to the structure we call a property hierarchy. The IsA relationship is transitive and may not be cyclic.
Some object-oriented languages, such as C++, have no equivalent to the specialization of properties.

superproperty A superproperty is a **property** that is a generalization of one or more other properties (its **subproperties**), which means that it subsumes all **instances** of its subproperties, and that it can also have additional instances that do not belong to any of its subproperties. The

intension of the superproperty is less restrictive than any of its subproperties. The subsumption relationship or generalization is the inverse of the IsA relationship or specialization.

domain	The domain is the class for which a property is formally defined. This means that instances of the property are applicable to instances of its domain class. A property must have exactly one domain, although the domain class may always contain instances for which the property is not instantiated. The domain class is analogous to the grammatical subject of the phrase for which the property is analogous to the verb. It is arbitrary, which class is selected as the domain and which as the range , just as the choice between active and passive voice in grammar is arbitrary. Property names in the CRM are designed to be semantically meaningful and grammatically correct when read from domain to range. In addition, the inverse property name, normally given in parentheses, is also designed to be semantically meaningful and grammatically correct when read from range to domain.
range	The range is the class that comprises all potential values of a property . That means that instances of the property can link only to instances of its range class. A property must have exactly one range, although the range class may always contain instances that are not the value of the property. The range class is analogous to the grammatical object of a phrase for which the property is analogous to the verb. It is arbitrary, which class is selected as domain and which as range, just as the choice between active and passive voice in grammar is arbitrary. Property names in the CRM are designed to be semantically meaningful and grammatically correct when read from domain to range. In addition the inverse property name, normally given in parentheses, is also designed to be semantically meaningful and grammatically correct when read from range to domain.
inheritance	Inheritance of properties from superclasses to subclasses means that if an item x is an instance of a class A, then <ol style="list-style-type: none">1. all properties that must hold for the instances of any of the superclasses of A must also hold for item x, and all optional properties that may hold for the instances of any of the superclasses of A may also hold for item x.
strict inheritance	Strict inheritance means that there are no exceptions to the inheritance of properties from superclasses to subclasses . For instance, some systems may declare that elephants are grey, and regard a white elephant as an exception. Under strict inheritance it would hold that: if all elephants were grey, then a white elephant could not be an elephant. Obviously not all elephants are grey. To be grey is not part of the intension of the concept elephant but an optional property. The CRM applies strict inheritance as a normalization principle.
multiple inheritance	Multiple inheritance means that a class A may have more than one immediate superclass . The extension of a class with multiple immediate superclasses is a subset of the intersection of all extensions of its superclasses. The intension of a class with multiple immediate superclasses extends the intensions of all its superclasses, i.e. its traits are more restrictive than any of its superclasses. If multiple inheritance is used, the resulting “class hierarchy” is a directed graph and not a tree structure. If it is represented as an indented list, there are necessarily repetitions of the same class at different positions in the list. For example, Person is both, an Actor and a Biological Object.
instance	An instance of a class is a real world item that fulfils the criteria of the intension of the class. Note, that the number of instances declared for a class in an information system is typically less than the total in the real world. For example, you are an instance of Person, but you are not mentioned in all information systems describing Persons.
endurant, perdurant	“The difference between enduring and perduring entities (which we shall also call <i>endurants</i> and <i>perdurants</i>) is related to their behaviour in time. Endurants are wholly present (i.e., all their proper parts are present) at any time they are present. Perdurants, on the other hand, just extend in time by accumulating different temporal parts, so that, at any time they are present, they are only partially present, in the sense that some of their proper temporal parts (e.g., their previous or future phases) may be not present. E.g., the piece of

paper you are reading now is wholly present, while some temporal parts of your reading are not present any more. Philosophers say that endurants are entities that are in time, while lacking however temporal parts (so to speak, all their parts flow with them in time). Perdurants, on the other hand, are entities that happen in time, and can have temporal parts (all their parts are fixed in time).” (Gangemi et al. 2002, pp. 166-181).

shortcut	A shortcut is a formally defined single property that represents a deduction or join of a data path in the CRM. The scope notes of all properties characterized as shortcuts describe in words the equivalent deduction. Shortcuts are introduced for the cases where common documentation practice refers only to the deduction rather than to the fully developed path. For example, museums often only record the dimension of an object without documenting the Measurement that observed it. The CRM allows shortcuts as cases of less detailed knowledge, while preserving in its schema the relationship to the full information.
monotonic reasoning	Monotonic reasoning is a term from knowledge representation. A reasoning form is monotonic if an addition to the set of propositions making up the knowledge base never determines a decrement in the set of conclusions that may be derived from the knowledge base via inference rules. In practical terms, if experts enter subsequently correct statements to an information system, the system should not regard any results from those statements as invalid, when a new one is entered. The CRM is designed for monotonic reasoning and so enables conflict-free merging of huge stores of knowledge.
disjoint	Classes are disjoint if the intersection of their extensions is an empty set. In other words, they have no common instances in any possible world.
primitive	The term primitive as used in knowledge representation characterizes a concept that is declared and its meaning is agreed upon, but that is not defined by a logical deduction from other concepts. For example, mother may be described as a female human with child. Then mother is not a primitive concept. Event however is a primitive concept. Most of the CRM is made up of primitive concepts.
Open World	The “Open World Assumption” is a term from knowledge base systems. It characterizes knowledge base systems that assume the information stored is incomplete relative to the universe of discourse they intend to describe. This incompleteness may be due to the inability of the maintainer to provide sufficient information or due to more fundamental problems of cognition in the system’s domain. Such problems are characteristic of cultural information systems. Our records about the past are necessarily incomplete. In addition, there may be items that cannot be clearly assigned to a given class . In particular, absence of a certain property for an item described in the system does not mean that this item does not have this property. For example, if one item is described as Biological Object and another as Physical Object, this does not imply that the latter may not be a Biological Object as well. Therefore complements of a class with respect to a superclass cannot be concluded in general from an information system using the Open World Assumption. For example, one cannot list “all Physical Objects known to the system that are not Biological Objects in the real world”, but one may of course list “all items known to the system as Physical Objects but that are not known to the system as Biological Objects”.
complement	The complement of a class A with respect to one of its superclasses B is the set of all instances of B that are not instances of A. Formally, it is the set-theoretic difference of the extension of B minus the extension of A. Compatible extensions of the CRM should not declare any class with the intension of them being the complement of one or more other classes. To do so will normally violate the desire to describe an Open World . For example, for all possible cases of human gender, male should not be declared as the complement of female or vice versa. What if someone is both or even of another kind?
query containment	Query containment is a problem from database theory: A query X contains another query Y, if for each possible population of a database the answer set to query X contains also the answer set to query Y. If query X and Y were classes, then X would be superclass of Y.

interoperability	<p>Interoperability means the capability of different information systems to communicate some of their contents. In particular, it may mean that</p> <ol style="list-style-type: none"> 1. two systems can exchange information, and/or 2. multiple systems can be accessed with a single method. <p>Generally, syntactic interoperability is distinguished from semantic interoperability. Syntactic interoperability means that the information encoding of the involved systems and the access protocols are compatible, so that information can be processed as described above without error. However, this does not mean that each system processes the data in a manner consistent with the intended meaning. For example, one system may use a table called “Actor” and another one called “Agent”. With syntactic interoperability, data from both tables may only be retrieved as distinct, even though they may have exactly the same meaning. To overcome this situation, semantic interoperability has to be added. The CRM relies on existing syntactic interoperability and is concerned only with adding <i>semantic interoperability</i>.</p>
semantic interoperability	<p>Semantic interoperability means the capability of different information systems to communicate information consistent with the intended meaning. In more detail, the intended meaning encompasses</p> <ol style="list-style-type: none"> 1. the data structure elements involved, 2. the terminology appearing as data and 3. the identifiers used in the data for factual items such as places, people, objects etc. <p>Obviously communication about data structure must be resolved first. In this case consistent communication means that data can be transferred between data structure elements with the same intended meaning or that data from elements with the same intended meaning can be merged. In practice, the different levels of generalization in different systems do not allow the achievement of this ideal. Therefore semantic interoperability is regarded as achieved if elements can be found that provide a reasonably close generalization for the transfer or merge. This problem is being studied theoretically as the query containment problem. The CRM is only concerned with semantic interoperability on the level of data structure elements.</p>
property quantifiers	<p>We use the term property quantifiers for the declaration of the allowed number of instances of a certain property that an instance of its range or domain may have. These declarations are ontological, i.e. they refer to the nature of the real world described and not to our current knowledge. For example, each person has exactly one father, but collected knowledge may refer to none, one or many.</p>
universal	<p>The fundamental ontological distinction between universals and particulars can be informally understood by considering their relationship with instantiation: particulars are entities that have no instances in any possible world; universals are entities that do have instances. Classes and properties (corresponding to predicates in a logical language) are usually considered to be universals. (after Gangemi et al. 2002, pp. 166-181).</p>

Property Quantifiers

Quantifiers for properties are provided for the purpose of semantic clarification only, and should **not** be treated as implementation recommendations. The CRM has been designed to accommodate alternative opinions and incomplete information, and therefore **all** properties should be implemented as optional and repeatable for their domain and range (“many to many (0,n:0,n)”). Therefore the term “cardinality constraints” is avoided here, as it typically pertains to implementations.

The following table lists all possible property quantifiers occurring in this document by their notation, together with an explanation in plain words. In order to provide optimal clarity, two widely accepted notations are used redundantly in this document, a verbal and a numeric one. The verbal notation uses phrases such as “one to many”, and the numeric one, expressions such as “(0,n:0,1)”. While the terms “one”, “many” and “necessary” are quite intuitive, the term “dependent” denotes a situation where a range instance cannot exist without an instance of the respective property. In other words, the property is “necessary” for its range.

many to many (0,n:0,n)	Unconstrained: An individual domain instance and range instance of this property can have zero, one or more instances of this property. In other words, this property is optional and repeatable for its domain and range.
one to many (0,n:0,1)	An individual domain instance of this property can have zero, one or more instances of this property, but an individual range instance cannot be referenced by more than one instance of this property. In other words, this property is optional for its domain and range, but repeatable for its domain only. In some contexts this situation is called a “fan-out”.
many to one (0,1:0,n)	An individual domain instance of this property can have zero or one instance of this property, but an individual range instance can be referenced by zero, one or more instances of this property. In other words, this property is optional for its domain and range, but repeatable for its range only. In some contexts this situation is called a “fan-in”.
many to many, necessary (1,n:0,n)	An individual domain instance of this property can have one or more instances of this property, but an individual range instance can have zero, one or more instances of this property. In other words, this property is necessary and repeatable for its domain, and optional and repeatable for its range.
one to many, necessary (1,n:0,1)	An individual domain instance of this property can have one or more instances of this property, but an individual range instance cannot be referenced by more than one instance of this property. In other words, this property is necessary and repeatable for its domain, and optional but not repeatable for its range. In some contexts this situation is called a “fan-out”.
many to one, necessary (1,1:0,n)	An individual domain instance of this property must have exactly one instance of this property, but an individual range instance can be referenced by zero, one or more instances of this property. In other words, this property is necessary and not repeatable for its domain, and optional and repeatable for its range. In some contexts this situation is called a “fan-in”.
one to many, dependent (0,n:1,1)	An individual domain instance of this property can have zero, one or more instances of this property, but an individual range instance must be referenced by exactly one instance of this property. In other words, this property is optional and repeatable for its domain, but necessary and not repeatable for its range. In some contexts this situation is called a “fan-out”.
one to many, necessary, dependent (1,n:1,1)	An individual domain instance of this property can have one or more instances of this property, but an individual range instance must be referenced by exactly one instance of this property. In other words, this property is necessary and repeatable for its domain, and necessary but not repeatable for its range. In some contexts this situation is called a “fan-out”.
many to one, necessary, dependent (1,1:1,n)	An individual domain instance of this property must have exactly one instance of this property, but an individual range instance can be referenced by one or more instances of this property. In other words, this property is necessary and not repeatable for its domain, and necessary and repeatable for its range. In some contexts this situation is called a “fan-in”.
one to one (1,1:1,1)	An individual domain instance and range instance of this property must have exactly one instance of this property. In other words, this property is necessary and not repeatable for its domain and for its range.

The CRM defines some properties as being **necessary** for their **domain** or as being **dependent** from their **range**, following the definitions in the table above. Note that if such a property is not specified for an instance of the respective domain or range, it means that the property exists, but the value on one side of the property is unknown. In the case of optional properties, the methodology proposed by the CRM does not distinguish between a value being unknown or the property not being applicable at all. For example, one may know that an object has an owner, but the owner is unknown. In a CRM instance this case cannot be distinguished from the fact that the object has no owner at all. Of course, such details can always be specified by a textual note.

Naming Conventions

The following naming conventions have been applied throughout the CRM:

- Classes are identified by numbers preceded by the letter “E” (historically classes were sometimes referred to as “Entities”), and are named using noun phrases (nominal groups) using title case (initial capitals). For example, E63 Beginning of Existence.
- Properties are identified by numbers preceded by the letter “P,” and are named in both directions using verbal phrases in lower case. Properties with the character of states are named in the present tense, such as “has type”, whereas properties related to events are named in past tense, such as “carried out.” For example, P126 *employed (was employed by)*.
- Property names should be read in their non-parenthetical form for the domain-to-range direction, and in parenthetical form for the range-to-domain direction.
- Properties with a range that is a subclass of E59 Primitive Value (such as E1 CRM Entity. P3 has note: E62 String, for example) have no parenthetical name form, because reading the property name in the range-to-domain direction is not regarded as meaningful.
- Properties that have identical domain and range are either symmetric or transitive. Instantiating a symmetric property implies that the same relation holds for both the domain-to-range and the range-to-domain directions. An example of this is E53 Place. P122 *borders with: E53 Place*. The names of symmetric properties have no parenthetical form, because reading in the range-to-domain direction is the same as the domain-to-range reading. Transitive asymmetric properties, such as E4 Period. P9 *consist of (forms part of): E4 Period*, have a parenthetical form that relates to the meaning of the inverse direction.
- The choice of the domain of properties, and hence the order of their names, are established in accordance with the following priority list:
 - Temporal Entity and its subclasses
 - Thing and its subclasses
 - Actor and its subclasses
 - Other

Modelling principles

The following modelling principles have guided and informed the development of the CIDOC CRM.

Monotonicity

Because the CRM’s primary role is the meaningful integration of information in an Open World, it aims to be monotonic in the sense of Domain Theory. That is, the existing CRM constructs and the deductions made from them must always remain valid and well-formed, even as new constructs are added by extensions to the CRM.

For example:

One may add a subclass of E7 Activity to describe the practice of an instance of group to use a certain name for a place over a certain time-span. By this extension, no existing ISA Relationships or property inheritances are compromised.

In addition, the CRM aims to enable the formal preservation of monotonicity when augmenting a particular CRM compatible system. That is, existing CRM instances, their properties and deductions made from them, should always remain valid and well-formed, even as new instances, regarded as consistent by the domain expert, are added to the system.

For example:

If someone describes correctly that an item is an instance of E19 Physical Object, and later it is correctly characterized as an instance of E20 Biological Object, the system should not stop treating it as an instance of E19 Physical Object.

In order to formally preserve monotonicity for the frequent cases of alternative opinions, all formally defined properties should be implemented as unconstrained (**many:many**) so that conflicting instances of properties are merely accumulated. Thus knowledge integrated following the CRM serves as a research base, accumulating

relevant alternative opinions around well-defined entities, whereas conclusions about the truth are the task of open-ended scientific or scholarly hypothesis building.

For example:

El Greco and even King Arthur should always remain an instance of E21 Person and be dealt with as existing within the sense of our discourse, once they are entered into our knowledge base. Alternative opinions about properties, such as their birthplaces and their living places, should be accumulated without validity decisions being made during data compilation.

Minimality

Although the scope of the CRM is very broad, the model itself is constructed as economically as possible.

- A class is not declared unless it is required as the domain or range of a property not appropriate to its superclass, or it is a key concept in the practical scope.
- CRM classes and properties that share a superclass are non-exclusive by default. For example, an object may be both an instance of E20 Biological Object and E22 Man-made Object.
- CRM classes and properties are either primitive, or they are key concepts in the practical scope.
- Complements of CRM classes are not declared.

Shortcuts

Some properties are declared as shortcuts of longer, more comprehensively articulated paths that connect the same domain and range classes as the shortcut property via one or more intermediate classes. For example, the property *E18 Physical Thing. P52 has current owner (is current owner of): E39 Actor*, is a shortcut for a fully articulated path from E18 Physical Thing through E8 Acquisition to E39 Actor. An instance of the fully-articulated path always implies an instance of the shortcut property. However, the inverse may not be true; an instance of the fully-articulated path cannot always be inferred from an instance of the shortcut property.

The class E13 Attribute Assignment allows for the documentation of how the assignment of any property came about, and whose opinion it was, even in cases of properties not explicitly characterized as “shortcuts”.

Disjointness

Classes are disjoint if they share no common instances in any possible world. There are many examples of disjoint classes in the CRM.

A comprehensive declaration of all possible disjoint class combinations afforded by the CRM has not been provided here; it would be of questionable practical utility, and may easily become inconsistent with the goal of providing a concise definition. However, there are two key examples of disjoint class pairs that are fundamental to effective comprehension of the CRM:

- **E2 Temporal Entity is disjoint from E77 Persistent Item.** Instances of the class E2 Temporal Entity are perdurants, whereas instances of the class E77 Persistent Item are endurants. Even though instances of E77 Persistent Item have a limited existence in time, they are fundamentally different in nature from instances of E2 Temporal Entity, because they preserve their identity between events. Declaring endurants and perdurants as disjoint classes is consistent with the distinctions made in data structures that fall within the CRM’s practical scope.
- **E18 Physical Thing is disjoint from E28 Conceptual Object.** The distinction is between material and immaterial items, the latter being exclusively man-made. Instances of E18 Physical Thing and E28 Conceptual Object differ in many fundamental ways; for example, the production of instances of E18 Physical Thing implies the incorporation of physical material, whereas the production of instances of E28 Conceptual Object does not. Similarly, instances of E18 Physical Thing cease to exist when destroyed, whereas an instance of E28 Conceptual Object perishes when it is forgotten or its last physical carrier is destroyed.

About Types

Virtually all structured descriptions of museum objects begin with a unique object identifier and information about the “type” of the object, often in a set of fields with names like “Object Type,” “Object Name,” “Category,” “Classification,” etc. All these fields are used for terms that declare that the object is a member of a particular class or category of items, and are described by the CRM as instances of E55 Type. Since the instances of this class are themselves classes, E55 Type is in fact a metaclass.

The class E1 CRM Entity is the domain of the property *P2 has type (is type of)*, which has the range E55 Type. Consequently, every class in the CRM, with the exception of E59 Primitive Value, inherits the property *P2 has type (is type of)*. This provides a general mechanism for refining the classification of CRM instances to any level of detail, by linking to external vocabulary sources, thesauri, classification schema or ontologies that function as *extensions* to the CRM class and property hierarchies. The external vocabularies do not themselves fall within the scope of the CRM.

The class E55 Type also serves as the range of properties that relate to categorical knowledge commonly found in cultural documentation. For example, the property *P125 used object of type (was type of object used in)* enables the CRM to express statements such as “this casting was produced using a mould”, meaning that there has been an unknown or unmentioned instance of “mould” that was actually used. This enables the specific instance of the casting to be associated with the entire type of manufacturing devices known as moulds. Further, the objects of type “mould” would be related via *P2 has type (is type of)* to this term. This indirect relationship may actually help in detecting the unknown object in an integrated environment. On the other side, some casting may refer directly to a known mould via *P16 used specific object (was used for)*. So a statistical question to how many objects in a certain collection are made with moulds could be answered correctly (following both paths through *P16 used specific object (was used for)* - *P2 has type (is type of)* and *P125 used object of type (was type of object used in)*). This consistent treatment of categorical knowledge significantly enhances the CRM’s ability to integrate cultural knowledge.

Some properties in the CRM are associated with an additional property. These are numbered in the CRM documentation with a “.1” extension. These do not appear in the property hierarchy list but are included as part of the property declarations and referred to in the class declarations. For example, *P62.1 mode of depiction: E55 Type* is associated with *E24 Physical Man-made Thing. P62 depicts (is depicted by): E1 CRM Entity*. The range of these properties of properties always falls within the type hierarchy E55 Type. Their purpose is to allow dynamic extensions to their parent property through the use of property subtypes declared as instances of E55 Type. This function is analogous to that of the *P2 has type (is type of)* property, which all CRM classes inherit from E1 CRM Entity. System implementations and schemas that do not support properties of properties may use dynamic subtyping of the parent properties instead.

Finally, types play a central role in the history of human understanding; they are intellectual products, and documentation about the history and justification by physical evidence of types (particularly in disciplines such as archaeology and natural history) falls squarely within the intended scope of the CRM. Therefore types are modelled as “conceptual objects,” in parallel to their structural role as metaclasses. This approach elegantly addresses the dual nature of types in a manner consistent with material culture and natural history documentation.

Extensions

Since the intended scope of the CRM is a subset of the “real” world and is therefore potentially infinite, the model has been designed to be extensible through the linkage of compatible external type hierarchies.

Compatibility of extensions with the CRM means that data structured according to an extension must also remain valid as a CRM instance. In practical terms, this implies *query containment*: any queries based on CRM concepts should retrieve a result set that is correct according to the CRM’s semantics, regardless of whether the knowledge base is structured according to the CRM’s semantics alone, or according to the CRM plus compatible extensions. For example, a query such as “list all events” should recall 100% of the instances deemed to be events by the CRM, regardless of how they are classified by the extension.

A sufficient condition for the compatibility of an extension with the CRM is that CRM classes subsume all classes of the extension, and all properties of the extension are either subsumed by CRM properties, or are part of a path for which a CRM property is a shortcut. Obviously, such a condition can only be tested intellectually.

Coverage

Of necessity, some concepts covered by the CRM are less thoroughly elaborated than others: E39 Actor and E30 Right, for example. This is a natural consequence of staying within the CRM’s clearly articulated practical scope in an intrinsically unlimited domain of discourse. These ‘underdeveloped’ concepts can be considered as hooks for compatible extensions.

The CRM provides a number of mechanisms to ensure that coverage of the intended scope is complete:

- Existing high level classes can be extended, either structurally as subclasses or dynamically using the type hierarchy.
- Existing high level properties can be extended, either structurally as subproperties, or in some cases, dynamically, using properties of properties which allow subtyping.
- Additional information that falls outside the semantics formally defined by the CRM can be recorded as unstructured data using *E1 CRM Entity*. *P3 has note: E62 String*.

In mechanisms 1 and 2 the CRM concepts subsume and thereby cover the extensions.

In mechanism 3, the information is accessible at the appropriate point in the respective knowledge base. This approach is preferable when detailed, targeted queries are not expected; in general, only those concepts used for formal querying need to be explicitly modelled.

Examples

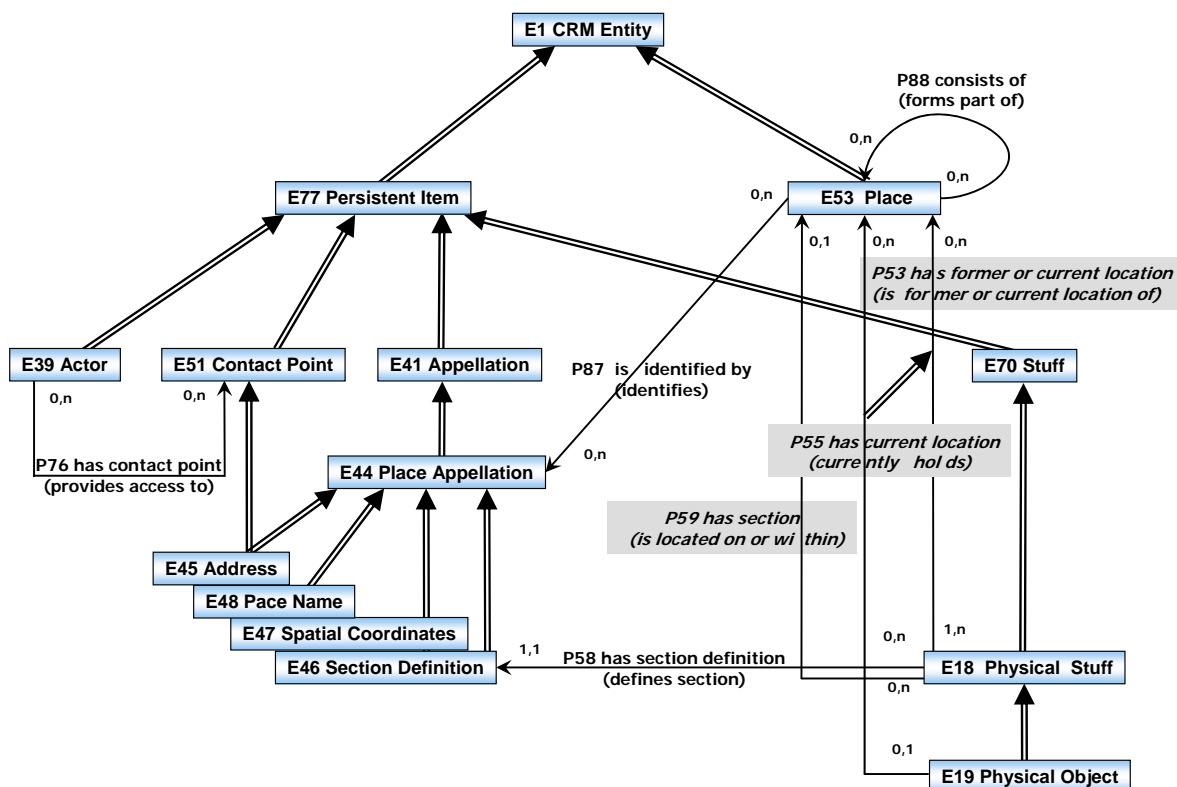

fig. 1 reasoning about spatial information

The diagram above shows a partial view of the CRM, representing reasoning about spatial information. Five of the main hierarchy branches are included in this view: E39 Actor, E51 Contact Point, E41 Appellation, E53 Place, and E70 Thing. The relationships between these main classes and their subclasses are shown as arrows. Properties between classes are shown as green rectangles. A ‘shortcut’ property is included in this view: *P59 has section (is located on or within)* between E53 Place and E19 Physical Object is a shortcut of the path through E46 Section Definition. In some cases the order of priority for property names has been modified in order to facilitate reading the diagram from left to right.

As can be seen, an instance of E53 Place *is identified by* an instance of E44 Place Appellation, which may be an instance of E45 Address, E47 Spatial Coordinates, E48 Place Name, or E46 Section Definition such as ‘basement’, ‘prow’, or ‘lower left-hand corner.’ An instance of E53 Place may *consist of* or *form part of* another instance of E53 Place, thereby allowing a hierarchy of physical ‘containers’ to be constructed.

An instance of E45 Address can be considered both as an E44 Place Appellation—a way of referring to an E53 Place—and as an E51 Contact Point for an E39 Actor. An E39 Actor may have any number of instances of E51

a particular government, although there is no causal or contextual connection between the two instances of E52 Time-Span; conversely, the E4 Period of the Chinese Song Dynasty *consists of* the Northern Song Period and the Southern Song Period.

Instances of E52 Time-Span are related to their outer bounds (i.e. their indeterminacy interval) by the property *P82 at some time within*, and to their inner bounds via the property *P81 ongoing throughout*. The range of these properties is the E61 Time Primitive class, instances of which are treated by the CRM as application or system specific date intervals that are not further analysed.

Class & Property Hierarchies

Although they do not provide comprehensive definitions, compact monohierarchical presentations of the class and property IsA hierarchies have been found to significantly aid comprehension and navigation of the CRM, and are therefore provided below.

The class hierarchy presented below has the following format:

- Each line begins with a unique class identifier, consisting of a number preceded by the letter “E” (originally denoting “entity,” although now replaced by convention with the term “class”).
- A series of hyphens (“-”) follows the unique class identifier, indicating the hierarchical position of the class in the IsA hierarchy.
- The English name of the class appears to the right of the hyphens.
- The index is ordered by hierarchical level, in a “depth first” manner, from the smaller to the larger subhierarchies.
- Classes that appear in more than one position in the class hierarchy as a result of multiple inheritance are shown in an italic typeface.

The property hierarchy presented below has the following format:

- Each line begins with a unique property identifier, consisting of a number preceded by the letter “P” (for “property”).
- A series of hyphens (“-”) follows the unique property identifier, indicating the hierarchical position of the property in the IsA hierarchy.
- The English name of the property appears to the right of the hyphens, followed by its inverse name in parentheses for reading in the range to domain direction.
- The domain class for which the property is declared.
- The range class that the property references.
- The index is ordered by hierarchical level, in a “depth first” manner, from the smaller to the larger subhierarchies, and by property number between equal siblings.
- Properties that appear in more than one position in the property hierarchy as a result of multiple inheritance are shown in an italic typeface.

CIDOC CRM Class Hierarchy

E1	CRM Entity
E2	- Temporal Entity
E3	- - Condition State
E4	- - Period

CIDOC CRM Property Hierarchy:

Property id	Property Name	Entity – Domain	Entity - Range
P1	is identified by (identifies)	E1 CRM Entity	E41 Appellation
P48	- has preferred identifier (is preferred identifier of)	E19 Physical Object	E42 Identifier
P78	- is identified by (identifies)	E52 Time-Span	E49 Time Appellation
P87	- is identified by (identifies)	E53 Place	E44 Place Appellation
P102	- has title (is title of)	E71 Man-Made Thing	E35 Title
P131	- is identified by (identifies)	E39 Actor	E82 Actor Appellation
P2	has type (is type of)	E1 CRM Entity	E55 Type
P3	has note	E1 CRM Entity	E62 String
P79	- beginning is qualified by	E52 Time-Span	E62 String
P80	- end is qualified by	E52 Time-Span	E62 String
P4	has time-span (is time-span of)	E2 Temporal Entity	E52 Time-Span
P5	consists of (forms part of)	E3 Condition State	E3 Condition State
P7	took place at (witnessed)	E4 Period	E53 Place
P26	- moved to (was destination of)	E9 Move	E53 Place
P27	- moved from (was origin of)	E9 Move	E53 Place
P8	took place on or within (witnessed)	E4 Period	E19 Physical Object
P9	consists of (forms part of)	E4 Period	E4 Period
P10	falls within (contains)	E4 Period	E4 Period
P12	occurred in the presence of (was present at)	E5 Event	E77 Persistent Item
P11	- had participant (participated in)	E5 Event	E39 Actor
P14	- carried out by (performed)	E7 Activity	E39 Actor
P22	- transferred title to (acquired title through)	E8 Acquisition	E39 Actor
P23	- transferred title from (surrendered title through)	E8 Acquisition	E39 Actor
P28	- custody surrendered by (surrendered custody through)	E10 Transfer of Custody	E39 Actor
P29	- custody received by (received custody through)	E10 Transfer of Custody	E39 Actor
P96	- by mother (gave birth)	E67 Birth	E21 Person
P99	- dissolved (was dissolved by)	E68 Dissolution	E74 Group
P143	- joined (was joined by)	E85 Joining	E39 Actor
P144	- joined with (gained member by)	E85 Joining	E74 Group
P145	- separated (left by)	E86 Leaving	E39 Actor
P146	- separated from (lost member by)	E86 Leaving	E74 Group
P148	- is identified by (identifies)	E28 Conceptual Object	E75 Conceptual Object Appellation
P16	- used specific object (was used for)	E7 Activity	E70 Thing
P25	- moved (moved by)	E9 Move	E19 Physical Object
P31	- has modified (was modified by)	E11 Modification	E24 Physical Man-Made Thing
P108	- has produced (was produced by)	E12 Production	E24 Physical Man-Made Thing
P110	- augmented (was augmented by)	E79 Part Addition	E24 Physical Man-Made Thing
P112	- diminished (was diminished by)	E80 Part Removal	E24 Physical Man-Made Thing
P33	- used specific technique (was used by)	E7 Activity	E29 Design or Procedure
P92	- brought into existence (was brought into existence by)	E63 Beginning of Existence	E77 Persistent Item
P94	- has created (was created by)	E65 Creation	E28 Conceptual Object
P135	- created type (was created by)	E83 Type Creation	E55 Type
P95	- has formed (was formed by)	E66 Formation	E74 Group
P98	- brought into life (was born)	E67 Birth	E21 Person
P108	- <i>has produced (was produced by)</i>	E12 Production	E24 Physical Man-Made Thing
P123	- resulted in (resulted from)	E81 Transformation	E77 Persistent Item
P93	- took out of existence (was taken out of existence by)	E64 End of Existence	E77 Persistent Item
P13	- destroyed (was destroyed by)	E6 Destruction	E18 Physical Thing
P99	- <i>dissolved (was dissolved by)</i>	E68 Dissolution	E74 Group
P100	- was death of (died in)	E69 Death	E21 Person
P124	- transformed (was transformed by)	E81 Transformation	E77 Persistent Item
P15	was influenced by (influenced)	E7 Activity	E1 CRM Entity
P16	- used specific object (was used for)	E7 Activity	E70 Thing
P17	- was motivated by (motivated)	E7 Activity	E1 CRM Entity
P33	- used specific technique (was used by)	E11 Modification	E29 Design or Procedure
P134	- continued (was continued by)	E7 Activity	E7 Activity
P136	- was based on (supported type creation)	E83 Type Creation	E1 CRM Entity
P19	was intended use of (was made for)	E7 Activity	E71 Man-Made Thing
P20	had specific purpose (was purpose of)	E7 Activity	E7 Activity
P21	had general purpose (was purpose of)	E7 Activity	E55 Type
P24	transferred title of (changed ownership through)	E8 Acquisition	E18 Physical Thing
P30	transferred custody of (custody transferred through)	E10 Transfer of Custody	E18 Physical Thing
P32	used general technique (was technique of)	E7 Activity	E55 Type
P43	has dimension (is dimension of)	E70 Thing	E54 Dimension
P44	has condition (condition of)	E18 Physical Thing	E3 Condition State
P45	consists of (is incorporated in)	E18 Physical Thing	E57 Material
P46	is composed of (forms part of)	E18 Physical Thing	E18 Physical Thing
P49	has former or current keeper (is former or current keeper of)	E18 Physical Thing	E39 Actor

Property id	Property Name	Entity – Domain	Entity - Range
P50	- has current keeper (is current keeper of)	E18 Physical Thing	E39 Actor
P51	has former or current owner (is former or current owner of)	E18 Physical Thing	E39 Actor
P52	- has current owner (is current owner of)	E18 Physical Thing	E39 Actor
P53	has former or current location (is former or current location of)	E18 Physical Thing	E53 Place
P55	- has current location (currently holds)	E19 Physical Object	E53 Place
P54	has current permanent location (is current permanent location of)	E19 Physical Object	E53 Place
P56	bears feature (is found on)	E19 Physical Object	E26 Physical Feature
P57	has number of parts	E19 Physical Object	E60 Number
P58	has section definition (defines section)	E18 Physical Thing	E46 Section Definition
P59	has section (is located on or within)	E18 Physical Thing	E53 Place
P62	depicts (is depicted by)	E24 Physical Man-Made Thing	E1 CRM Entity
P67	refers to (is referred to by)	E73 Information Object	E1 CRM Entity
P70	- documents (is documented in)	E31 Document	E1 CRM Entity
P71	- lists (is listed in)	E32 Authority Document	E55 Type
P129	- is about (is subject of)	E73 Information Object	E1 CRM Entity
P138	- represents (has representation)	E36 Visual Item	E1 CRM Entity
P68	usually employs (is usually employed by)	E29 Design or Procedure	E57 Material
P69	is associated with	E29 Design or Procedure	E29 Design or Procedure
P72	has language (is language of)	E33 Linguistic Object	E56 Language
P74	has current or former residence (is current or former residence of)	E39 Actor	E53 Place
P75	possesses (is possessed by)	E39 Actor	E30 Right
P76	has contact point (provides access to)	E39 Actor	E51 Contact Point
P81	ongoing throughout	E52 Time-Span	E61 Time Primitive
P82	at some time within	E52 Time-Span	E61 Time Primitive
P83	had at least duration (was minimum duration of)	E52 Time-Span	E54 Dimension
P84	had at most duration (was maximum duration of)	E52 Time-Span	E54 Dimension
P86	falls within (contains)	E52 Time-Span	E53 Time-Span
P88	consists of (forms part of)	E53 Place	E53 Place
P89	falls within (contains)	E53 Place	E53 Place
P90	has value	E54 Dimension	E60 Number
P91	has unit (is unit of)	E54 Dimension	E58 Measurement Unit
P97	from father (was father for)	E67 Birth	E21 Person
P101	had as general use (was use of)	E70 Thing	E55 Type
P103	was intended for (was intention of)	E71 Man-Made Thing	E55 Type
P104	is subject to (applies to)	E72 Legal Object	E30 Right
P105	right held by (has right on)	E72 Legal Object	E39 Actor
P106	is composed of (forms part of)	E73 Information Object	E73 Information Object
P107	has current or former member (is current or former member of)	E74 Group	E39 Actor
P109	has current or former curator (is current or former curator of)	E78 Collection	E39 Actor
P111	added (was added by)	E79 Part Addition	E18 Physical Thing
P113	removed (was removed by)	E80 Part Removal	E18 Physical Thing
P114	is equal in time to	E2 Temporal Entity	E2 Temporal Entity
P115	finishes (is finished by)	E2 Temporal Entity	E2 Temporal Entity
P116	starts (is started by)	E2 Temporal Entity	E2 Temporal Entity
P117	occurs during (includes)	E2 Temporal Entity	E2 Temporal Entity
P118	overlaps in time with (is overlapped in time by)	E2 Temporal Entity	E2 Temporal Entity
P119	meets in time with (is met in time by)	E2 Temporal Entity	E2 Temporal Entity
P120	occurs before (occurs after)	E2 Temporal Entity	E2 Temporal Entity
P121	overlaps with	E53 Place	E53 Place
P122	borders with	E53 Place	E53 Place
P125	used object of type (was type of object used in)	E7 Activity	E55 Type
P126	employed (was employed in)	E11 Modification	E57 Material
P127	has broader term (has narrower term)	E55 Type	E55 Type
P128	carries (is carried by)	E24 Physical Man-Made Thing	E73 Information Object
P65	- shows visual item (is shown by)	E24 Physical Man-Made Thing	E36 Visual Item
P130	shows features of (features are also found on)	E70 Thing	E70 Thing
P73	- has translation (is translation of)	E33 Linguistic Object	E33 Linguistic Object
P132	overlaps with	E4 Period	E4 Period
P133	is separated from	E4 Period	E4 Period
P137	is exemplified by (exemplifies)	E55 Type	E1 CRM Entity
P139	has alternative form	E41 Appellation	E41 Appellation
P140	assigned attribute to (was attributed by)	E13 Attribute Assignment	E1 CRM Entity
P34	- concerned (was assessed by)	E14 Condition Assessment	E18 Physical Thing
P39	- measured (was measured by)	E16 Measurement	E70 Thing
P41	- classified (was classified by)	E17 Type Assignment	E1 CRM Entity
P141	assigned (was assigned by)	E13 Attribute Assignment	E1 CRM Entity
P35	- has identified (identified by)	E14 Condition Assessment	E3 Condition State
P37	- assigned (was assigned by)	E15 Identifier Assignment	E42 Identifier
P38	- deassigned (was deassigned by)	E15 Identifier Assignment	E42 Identifier
P40	- observed dimension (was observed in)	E16 Measurement	E54 Dimension
P42	- assigned (was assigned by)	E17 Type Assignment	E55 Type
P147	curated (was curated by)	E87 Curation Activity	E78 Collection

CIDOC CRM Class Declarations

The classes of the CRM are comprehensively declared in this section using the following format:

- Class names are presented as headings in bold face, preceded by the class' unique identifier;
- The line "Subclass of:" declares the superclass of the class from which it inherits properties;
- The line "Superclass of:" is a cross-reference to the subclasses of this class;
- The line "Scope note:" contains the textual definition of the concept the class represents;
- The line "Examples:" contains a bulleted list of examples of instances of this class. If the example is also instance of a subclass of this class, the unique identifier of the subclass is added in parenthesis. If the example instantiates two classes, the unique identifiers of both classes is added in parenthesis. Non-fictitious examples may be followed by an explanation in brackets.
- The line "Properties:" declares the list of the class' properties;
- Each property is represented by its unique identifier, its forward and reverse names, and the range class that it links to, separated by colons;
- Inherited properties are not represented;
- Properties of properties are provided indented and in parentheses beneath their respective domain property.

E1 CRM Entity

Superclass of: [E2](#) Temporal Entity
[E52](#) Time-Span
[E53](#) Place
[E54](#) Dimension
[E77](#) Persistent Item

Scope note: This class comprises all things in the universe of discourse of the CIDOC Conceptual Reference Model.

It is an abstract concept providing for three general properties:

1. Identification by name or appellation, and in particular by a preferred identifier
2. Classification by type, allowing further refinement of the specific subclass an instance belongs to
3. Attachment of free text for the expression of anything not captured by formal properties

With the exception of [E59](#) Primitive Value, all other classes within the CRM are directly or indirectly specialisations of E1 CRM Entity.

Examples:

- the earthquake in Lisbon 1755 ([E5](#))

Properties:

[P1](#) is identified by (identifies): [E41](#) Appellation

[P2](#) has type (is type of): [E55](#) Type

[P3](#) has note: [E62](#) String

[P48](#) has preferred identifier (is preferred identifier of): [E42](#) Identifier

E2 Temporal Entity

Subclass of: [E1](#) CRM Entity

Superclass of: [E3](#) Condition State
[E4](#) Period

Scope note: This class comprises all phenomena, such as the instances of [E4](#) Periods, [E5](#) Events and states, which happen over a limited extent in time.

In some contexts, these are also called perdurants. This class is disjoint from [E77](#) Persistent Item. This is an abstract class and has no direct instances. [E2](#) Temporal Entity is specialized into [E4](#) Period, which applies to a particular geographic area (defined with a greater or lesser degree of precision), and [E3](#) Condition State, which applies to instances of [E18](#) Physical Thing.

Examples:

- Bronze Age ([E4](#))
- the earthquake in Lisbon 1755 ([E5](#))
- the Peterhof Palace near Saint Petersburg being in ruins from 1944 – 1946 ([E3](#))

Properties:

[P4](#) has time-span (is time-span of): [E52](#) Time-Span

[P114](#) is equal in time to: [E2](#) Temporal Entity

[P115](#) finishes (is finished by): [E2](#) Temporal Entity

[P116](#) starts (is started by): [E2](#) Temporal Entity

[P117](#) occurs during (includes): [E2](#) Temporal Entity

[P118](#) overlaps in time with (is overlapped in time by): [E2](#) Temporal Entity

[P119](#) meets in time with (is met in time by): [E2](#) Temporal Entity

[P120](#) occurs before (occurs after): [E2](#) Temporal Entity

E3 Condition State

Subclass of: [E2](#) Temporal Entity

Scope note: This class comprises the states of objects characterised by a certain condition over a time-span.

An instance of this class describes the prevailing physical condition of any material object or feature during a specific E52 Time Span. In general, the time-span for which a certain condition can be asserted may be shorter than the real time-span, for which this condition held.

The nature of that condition can be described using *P2 has type*. For example, the E3 Condition State “condition of the SS Great Britain between 22 September 1846 and 27 August 1847” can be characterized as E55 Type “wrecked”.

Examples:

- the “Amber Room” in Tsarskoje Selo being completely reconstructed from summer 2003 until now
- the Peterhof Palace near Saint Petersburg being in ruins from 1944 – 1946
- the state of my turkey in the oven at 14:30 on 25 December, 2002 (*P2 has type: E55 Type* “still not cooked”)

Properties:

[P5](#) consists of (forms part of): [E3](#) Condition State

E4 Period

Subclass of: [E2](#) Temporal Entity

Superclass of: [E5](#) Event

Scope note: This class comprises sets of coherent phenomena or cultural manifestations bounded in time and space.

It is the social or physical coherence of these phenomena that identify an E4 Period and not the associated spatio-temporal bounds. These bounds are a mere approximation of the actual process of growth, spread and retreat. Consequently, different periods can overlap and coexist in time and space, such as when a nomadic culture exists in the same area as a sedentary culture.

Typically this class is used to describe prehistoric or historic periods such as the “Neolithic Period”, the “Ming Dynasty” or the “McCarthy Era”. There are however no assumptions about the scale of the associated phenomena. In particular all events are seen as synthetic processes consisting of coherent phenomena. Therefore E4 Period is a superclass of E5 Event. For example, a modern clinical E67 Birth can be seen as both an atomic E5 Event and as an E4 Period that consists of multiple activities performed by multiple instances of E39 Actor.

There are two different conceptualisations of ‘artistic style’, defined either by physical features or by historical context. For example, “Impressionism” can be viewed as a period lasting from approximately 1870 to 1905 during which paintings with particular characteristics were produced by a group of artists that included (among others) Monet, Renoir, Pissarro, Sisley and Degas. Alternatively, it can be regarded as a style applicable to all paintings sharing the characteristics of the works produced by the Impressionist painters, regardless of historical context. The first interpretation is an E4 Period, and the second defines morphological object types that fall under E55 Type.

Another specific case of an E4 Period is the set of activities and phenomena associated with a settlement, such as the populated period of Nineveh.

Examples:

- Jurassic
- European Bronze Age
- Italian Renaissance
- Thirty Years War
- Sturm und Drang
- Cubism

Properties:

[P7](#) took place at (witnessed): [E53](#) Place
[P8](#) took place on or within (witnessed): [E19](#) Physical Object
[P9](#) consists of (forms part of): [E4](#) Period
[P10](#) falls within (contains): [E4](#) Period
[P132](#) overlaps with: [E4](#) Period
[P133](#) is separated from: [E4](#) Period

E5 Event

Subclass of: [E4](#) Period
Superclass of: [E7](#) Activity
[E63](#) Beginning of Existence
[E64](#) End of Existence

Scope note: This class comprises changes of states in cultural, social or physical systems, regardless of scale, brought about by a series or group of coherent physical, cultural, technological or legal phenomena. Such changes of state will affect instances of [E77](#) Persistent Item or its subclasses.

The distinction between an E5 Event and an E4 Period is partly a question of the scale of observation. Viewed at a coarse level of detail, an E5 Event is an ‘instantaneous’ change of state. At a fine level, the E5 Event can be analysed into its component phenomena within a space and time frame, and as such can be seen as an E4 Period. The reverse is not necessarily the case: not all instances of E4 Period give rise to a noteworthy change of state.

Examples:

- the birth of Cleopatra ([E67](#))
- the destruction of Lisbon by earthquake in 1755 ([E6](#))
- World War II ([E7](#))
- the Battle of Stalingrad ([E7](#))
- the Yalta Conference ([E7](#))
- my birthday celebration 28-6-1995 ([E7](#))
- the falling of a tile from my roof last Sunday
- the CIDOC Conference 2003 ([E7](#))

Properties:

[P11](#) had participant (participated in): [E39](#) Actor
[P12](#) occurred in the presence of (was present at): [E77](#) Persistent Item

E6 Destruction

Subclass of: [E64](#) End of Existence

Scope note: This class comprises events that destroy one or more instances of [E18](#) Physical Thing such that they lose their identity as the subjects of documentation.

Some destruction events are intentional, while others are independent of human activity. Intentional destruction may be documented by classifying the event as both an E6 Destruction and E7 Activity.

The decision to document an object as destroyed, transformed or modified is context sensitive:

1. If the matter remaining from the destruction is not documented, the event is modelled solely as E6 Destruction.
2. An event should also be documented using E81 Transformation if it results in the destruction of one or more objects and the simultaneous production of others using parts or material from the original. In this case, the new items have separate identities. Matter is preserved, but identity is not.
3. When the initial identity of the changed instance of E18 Physical Thing is preserved, the event should be documented as E11 Modification.

Examples:

- the destruction of Lisbon by earthquake in 1755
- the destruction of Nineveh (E6, E7)
- the breaking of a champagne glass yesterday by my dog
- the shooting of the last wolf ('*Canis lupus* Linne, 1758') of the Rhineland/Germany, in Birreskopf/Eifel 1860 (now Museum Alexander Koenig inventory no.: ZFMK 86.385) (E6, E7)

Properties:

[P13](#) destroyed (was destroyed by): [E18](#) Physical Thing

E7 Activity

Subclass of: [E5](#) Event

Superclass of: [E8](#) Acquisition

[E9](#) Move

[E10](#) Transfer of Custody

[E11](#) Modification

[E13](#) Attribute Assignment

[E65](#) Creation

[E66](#) Formation

[E85](#) Joining

[E86](#) Leaving

Scope note: This class comprises actions intentionally carried out by instances of E39 Actor that result in changes of state in the cultural, social, or physical systems documented.

This notion includes complex, composite and long-lasting actions such as the building of a settlement or a war, as well as simple, short-lived actions such as the opening of a door.

Examples:

- the Battle of Stalingrad
- the Yalta Conference
- my birthday celebration 28-6-1995
- the writing of "Faust" by Goethe (E65)
- the formation of the Bauhaus 1919 (E66)

Properties:

[P14](#) carried out by (performed): [E39](#) Actor
(P14.1 in the role of: [E55](#) Type)

[P15](#) was influenced by (influenced): [E1](#) CRM Entity

[P16](#) used specific object (was used for): [E70](#) Thing
(P16.1 mode of use: [E55](#) Type)

[P17](#) was motivated by (motivated): [E1](#) CRM Entity

[P19](#) was intended use of (was made for): [E71](#) Man-Made Thing
(P19.1 mode of use: [E55](#) Type)

[P20](#) had specific purpose (was purpose of): [E7](#) Activity

[P21](#) had general purpose (was purpose of): [E55](#) Type

[P32](#) used general technique (was technique of): [E55](#) Type

[P33](#) used specific technique (was used by): [E29](#) Design or Procedure

[P125](#) used object of type (was type of object used in): [E55](#) Type

P134 continued (was continued by): E7 Activity

E8 Acquisition

Subclass of: [E7 Activity](#)

Scope note: This class comprises transfers of legal ownership from one or more instances of E39 Actor to one or more other instances of E39 Actor.

The class also applies to the establishment or loss of ownership of instances of E18 Physical Thing. It does not, however, imply changes of any other kinds of right. The recording of the donor and/or recipient is optional. It is possible that in an instance of E8 Acquisition there is either no donor or no recipient. Depending on the circumstances, it may describe:

1. the beginning of ownership
2. the end of ownership
3. the transfer of ownership
4. the acquisition from an unknown source
5. the loss of title due to destruction of the item

It may also describe events where a collector appropriates legal title, for example by annexation or field collection. The interpretation of the museum notion of "accession" differs between institutions. The CRM therefore models legal ownership (E8 Acquisition) and physical custody (E10 Transfer of Custody) separately. Institutions will then model their specific notions of accession and deaccession as combinations of these.

Examples

- the collection of a hammer-head shark of the genus *Sphyrna* (Carchariniformes) by John Steinbeck and Edward Ricketts at Puerto Escondido in the Gulf of Mexico on March 25th, 1940
- the acquisition of El Greco's "The Apostles Peter and Paul" by the State Hermitage in Saint Petersburg
- the loss of my stuffed chaffinch '*Fringilla coelebs* Linnaeus, 1758' due to insect damage last year

Properties:

[P22](#) transferred title to (acquired title through): [E39 Actor](#)

[P23](#) transferred title from (surrendered title through): [E39 Actor](#)

[P24](#) transferred title of (changed ownership through): [E18 Physical Thing](#)

E9 Move

Subclass of: [E7 Activity](#)

Scope note: This class comprises changes of the physical location of the instances of E19 Physical Object.

Note, that the class E9 Move inherits the property *P7 took place at (witnessed): E53 Place*. This property should be used to describe the trajectory or a larger area within which a move takes place, whereas the properties *P26 moved to (was destination of)*, *P27 moved from (was origin of)* describe the start and end points only. Moves may also be documented to consist of other moves (via *P9 consists of (forms part of)*), in order to describe intermediate stages on a trajectory. In that case, start and end points of the partial moves should match appropriately between each other and with the overall event.

Examples

- the relocation of London Bridge from the UK to the USA
- the movement of the exhibition “Treasures of Tutankhamun” 1976-1979

Properties:

P25 moved (moved by): E19 Physical Object
P26 moved to (was destination of): E53 Place
P27 moved from (was origin of): E53 Place

E10 Transfer of Custody

Subclass of: [E7](#) Activity

Scope note: This class comprises transfers of physical custody of objects between instances of [E39](#) Actor.

The recording of the donor and/or recipient is optional. It is possible that in an instance of E10 Transfer of Custody there is either no donor or no recipient. Depending on the circumstances it may describe:

1. the beginning of custody
2. the end of custody
3. the transfer of custody
4. the receipt of custody from an unknown source
5. the declared loss of an object

The distinction between the legal responsibility for custody and the actual physical possession of the object should be expressed using the property *P2 has type (is type of)*. A specific case of transfer of custody is theft.

The interpretation of the museum notion of "accession" differs between institutions. The CRM therefore models legal ownership and physical custody separately. Institutions will then model their specific notions of accession and deaccession as combinations of these.

Examples:

- the delivery of the paintings by Secure Deliveries Inc. to the National Gallery
- the return of Picasso's “Guernica” to Madrid's Prado in 1981

Properties:

P28 custody surrendered by (surrendered custody through): E39 Actor
P29 custody received by (received custody through): E39 Actor
P30 transferred custody of (custody transferred through): E18 Physical Thing

E11 Modification

Subclass of: [E7](#) Activity

Superclass of: [E12](#) Production
[E79](#) Part Addition
[E80](#) Part Removal

Scope note: This class comprises all instances of [E7](#) Activity that create, alter or change [E24](#) Physical Man-Made Thing.

This class includes the production of an item from raw materials, and other so far undocumented objects, and the preventive treatment or restoration of an object for conservation.

Since the distinction between modification and production is not always clear, modification is regarded as the more generally applicable concept. This implies that some items may be consumed or destroyed in a Modification, and that others may be produced as a result of it. An event should also be documented using [E81](#) Transformation if it results in the destruction of one or more objects and the simultaneous production of others using parts or material from the

originals. In this case, the new items have separate identities.

If the instance of the E29 Design or Procedure utilised for the modification prescribes the use of specific materials, they should be documented using properties of the design or procedure, rather than via *P126 employed (was employed in): E57 Material*.

Examples:

- the construction of the SS Great Britain (E12)
- the impregnation of the Vasa warship in Stockholm for preservation after 1956
- the transformation of the Enola Gay into a museum exhibit by the National Air and Space Museum in Washington DC between 1993 and 1995 (E12, E81)
- the last renewal of the gold coating of the Toshogu shrine in Nikko, Japan

Properties:

**[P31](#) has modified (was modified by): [E24](#) Physical Man-Made Thing
[P126](#) employed (was employed in): [E57](#) Material**

E12 Production

Subclass of: [E11](#) Modification
[E63](#) Beginning of Existence

Scope note: This class comprises activities that are designed to, and succeed in, creating one or more new items.

It specializes the notion of modification into production. The decision as to whether or not an object is regarded as new is context sensitive. Normally, items are considered “new” if there is no obvious overall similarity between them and the consumed items and material used in their production. In other cases, an item is considered “new” because it becomes relevant to documentation by a modification. For example, the scribbling of a name on a potsherd may make it a voting token. The original potsherd may not be worth documenting, in contrast to the inscribed one.

This entity can be collective: the printing of a thousand books, for example, would normally be considered a single event.

An event should also be documented using E81 Transformation if it results in the destruction of one or more objects and the simultaneous production of others using parts or material from the originals. In this case, the new items have separate identities and matter is preserved, but identity is not.

Examples:

- the construction of the SS Great Britain
- the recasting of the Little Mermaid at the harbour of Copenhagen
- the seventh edition of Rembrandt’s etching “Woman sitting half dressed beside a stove”, 1658, Bartsch Number 197

Properties:

[P108](#) has produced (was produced by): [E24](#) Physical Man-Made Thing

E13 Attribute Assignment

Subclass of: [E7](#) Activity
Superclass of: [E14](#) Condition Assessment
[E15](#) Identifier Assignment
[E16](#) Measurement
[E17](#) Type Assignment

Scope note: This class comprises the actions of making assertions about properties of an object or any relation between two items or concepts.

This class allows the documentation of how the respective assignment came about, and whose opinion it was. All the attributes or properties assigned in such an action can also be seen as directly attached to the respective item or concept, possibly as a collection of contradictory values. All cases of properties in this model that are also described indirectly through an action are characterised as "short cuts" of this action. This redundant modelling of two alternative views is preferred because many implementations may have good reasons to model either the action or the short cut, and the relation between both alternatives can be captured by simple rules.

In particular, the class describes the actions of people making propositions and statements during certain museum procedures, e.g. the person and date when a condition statement was made, an identifier was assigned, the museum object was measured, etc. Which kinds of such assignments and statements need to be documented explicitly in structures of a schema rather than free text, depends on if this information should be accessible by structured queries.

Examples:

- the assessment of the current ownership of Martin Doerr's silver cup in February 1997

Properties:

[P140](#) assigned attribute to (was attributed by): [E1](#) CRM Entity

[P141](#) assigned (was assigned by): [E1](#) CRM Entity

E14 Condition Assessment

Subclass of: [E13](#) Attribute Assignment

Scope note: This class describes the act of assessing the state of preservation of an object during a particular period.

The condition assessment may be carried out by inspection, measurement or through historical research. This class is used to document circumstances of the respective assessment that may be relevant to interpret its quality at a later stage, or to continue research on related documents.

Examples:

- last year's inspection of humidity damage to the frescos in the St. George chapel in our village

Properties:

[P34](#) concerned (was assessed by): [E18](#) Physical Thing

[P35](#) has identified (identified by): [E3](#) Condition State

E15 Identifier Assignment

Subclass of: [E13](#) Attribute Assignment

Scope note: This class comprises activities that result in the allocation of an identifier to an instance of E1 CRM Entity. An E15 Identifier Assignment may include the creation of the identifier from multiple constituents, which themselves may be instances of E41 Appellation. The syntax and kinds of constituents to be used may be declared in a rule constituting an instance of E29 Design or Procedure.

Examples of such identifiers include Find Numbers, Inventory Numbers, uniform titles in the sense of librarianship and Digital Object Identifiers (DOI). Documenting the act of identifier assignment and deassignment is especially useful when objects change custody or the

identification system of an organization is changed. In order to keep track of the identity of things in such cases, it is important to document by whom, when and for what purpose an identifier is assigned to an item.

The fact that an identifier is a preferred one for an organisation can be expressed by using the property *E1 CRM Entity. P48 has preferred identifier (is preferred identifier of): E42 Identifier*. It can better be expressed in a context independent form by assigning a suitable E55 Type, such as “preferred identifier assignment”, to the respective instance of E15 Identifier Assignment via the *P2 has type* property.

Examples:

- Replacement of the inventory number TA959a by GE34604 for a 17th century lament cloth at the Museum Benaki, Athens
- Assigning the author-uniform title heading “Goethe, Johann Wolfgang von, 1749-1832. Faust. 1. Theil.” for a work (E28)
- ~~01 June 2001 Assigning the personal name heading “Guillaume, de Machaut, ca. 1300-1377” (E42,E82) to Guillaume de Machaut (E21)~~
- On June 1, 2001 assigning the personal name heading “Guillaume, de Machaut, ca. 1300-1377” (E42,E82) to Guillaume de Machaut (E21)

Properties:

P37 assigned (was assigned by): E42 Identifier
P38 deassigned (was deassigned by): E42 Identifier
P142 used constituent (was used in): E41 Appellation

E16 Measurement

Subclass of: [E13](#) Attribute Assignment

Scope note: This class comprises actions measuring physical properties and other values that can be determined by a systematic procedure.

Examples include measuring the monetary value of a collection of coins or the running time of a specific video cassette.

The E16 Measurement may use simple counting or tools, such as yardsticks or radiation detection devices. The interest is in the method and care applied, so that the reliability of the result may be judged at a later stage, or research continued on the associated documents. The date of the event is important for dimensions, which may change value over time, such as the length of an object subject to shrinkage. Details of methods and devices are best handled as free text, whereas basic techniques such as "carbon 14 dating" should be encoded using *P2 has type (is type of): E55 Type*.

Examples:

- measurement of height of silver cup 232 on the 31st August 1997
- the carbon 14 dating of the “Schoeninger Speer II” in 1996 [an about 400.000 years old Palaeolithic complete wooden spear found in Schoeningen, Niedersachsen, Germany in 1995]

Properties:

P39 measured (was measured by): E70 Thing
P40 observed dimension (was observed in): E54 Dimension

E17 Type Assignment

Subclass of: [E13](#) Attribute Assignment

Scope note: This class comprises the actions of classifying items of whatever kind. Such items include objects, specimens, people, actions and concepts.

This class allows for the documentation of the context of classification acts in cases where the value of the classification depends on the personal opinion of the classifier, and the date that the classification was made. This class also encompasses the notion of "determination," i.e. the systematic and molecular identification of a specimen in biology.

Examples:

- the first classification of object GE34604 as Lament Cloth, October 2nd
- the determination of a cactus in Martin Doerr's garden as '*Cereus hildmannianus* K.Schumann', July 2003

Properties:

[P41](#) classified (was classified by): [E1](#) CRM Entity

[P42](#) assigned (was assigned by): [E55](#) Type

E18 Physical Thing

Subclass of: [E72](#) Legal Object

Superclass of: [E19](#) Physical Object
[E24](#) Physical Man-Made Thing
[E26](#) Physical Feature

Scope Note: This class comprises all persistent physical items with a relatively stable form, man-made or natural.

Depending on the existence of natural boundaries of such things, the CRM distinguishes the instances of E19 Physical Object from instances of E26 Physical Feature, such as holes, rivers, pieces of land etc. Most instances of E19 Physical Object can be moved (if not too heavy), whereas features are integral to the surrounding matter.

The CRM is generally not concerned with amounts of matter in fluid or gaseous states.

Examples:

- the Cullinan Diamond (E19)
- the cave "Ideon Andron" in Crete (E26)
- the Mona Lisa (E22)

Properties:

[P44](#) has condition (condition of): [E3](#) Condition State

[P45](#) consists of (is incorporated in): [E57](#) Material

[P46](#) is composed of (forms part of): [E18](#) Physical Thing

[P49](#) has former or current keeper (is former or current keeper of): [E39](#) Actor

[P50](#) has current keeper (is current keeper of): [E39](#) Actor

[P51](#) has former or current owner (is former or current owner of): [E39](#) Actor

[P52](#) has current owner (is current owner of): [E39](#) Actor

[P53](#) has former or current location (is former or current location of): [E53](#) Place

[P58](#) has section definition (defines section): [E46](#) Section Definition

[P59](#) has section (is located on or within): [E53](#) Place

E19 Physical Object

Subclass of: [E18](#) Physical Thing

Superclass of: [E20](#) Biological Object
[E22](#) Man-Made Object

Scope note: This class comprises items of a material nature that are units for documentation and have physical boundaries that separate them completely in an objective way from other objects.

The class also includes all aggregates of objects made for functional purposes of whatever kind, independent of physical coherence, such as a set of chessmen. Typically, instances of E19 Physical Object can be moved (if not too heavy).

In some contexts, such objects, except for aggregates, are also called “bona fide objects” (Smith & Varzi, 2000, pp.401-420), i.e. naturally defined objects.

The decision as to what is documented as a complete item, rather than by its parts or components, may be a purely administrative decision or may be a result of the order in which the item was acquired.

Examples:

- John Smith
- Aphrodite of Milos
- the Palace of Knossos
- the Cullinan Diamond
- Apollo 13 at the time of launch

Properties:

[P54](#) has current permanent location (is current permanent location of): [E53](#) Place

[P55](#) has current location (currently holds): [E53](#) Place

[P56](#) bears feature (is found on): [E26](#) Physical Feature

[P57](#) has number of parts: [E60](#) Number

E20 Biological Object

Subclass of: [E19](#) Physical Object

Superclass of: [E21](#) Person

Scope note: This class comprises individual items of a material nature, which live, have lived or are natural products of or from living organisms.

Artificial objects that incorporate biological elements, such as Victorian butterfly frames, can be documented as both instances of E20 Biological Object and E22 Man-Made Object.

Examples:

- me
- Tut-Ankh-AmunP
- Boukephalas [Horse of Alexander the Great]
- petrified dinosaur excrement PA1906-344

E21 Person

Subclass of: [E20](#) Biological Object

[E39](#) Actor

Scope note: This class comprises real persons who live or are assumed to have lived.

Legendary figures that may have existed, such as Ulysses and King Arthur, fall into this class if the documentation refers to them as historical figures. In cases where doubt exists as to whether several persons are in fact identical, multiple instances can be created and linked to

indicate their relationship. The CRM does not propose a specific form to support reasoning about possible identity.

Examples:

- Tut-Ankh-Amun
- Nelson Mandela

E22 Man-Made Object

Subclass of: [E19](#) Physical Object
[E24](#) Physical Man-Made Thing

Superclass of: [E84](#) Information Carrier

Scope note: This class comprises physical objects purposely created by human activity.

No assumptions are made as to the extent of modification required to justify regarding an object as man-made. For example, an inscribed piece of rock or a preserved butterfly are both regarded as instances of E22 Man-Made Object.

Examples:

- Mallard (the World's fastest steam engine)
- the Portland Vase
- the Coliseum

E24 Physical Man-Made Thing

Subclass of: [E18](#) Physical Thing
[E71](#) Man-Made Thing

Superclass of: [E22](#) Man-Made Object
[E25](#) Man-Made Feature
[E78](#) Collection

Scope Note: This class comprises all persistent physical items that are purposely created by human activity.

This class comprises man-made objects, such as a swords, and man-made features, such as rock art. No assumptions are made as to the extent of modification required to justify regarding an object as man-made. For example, a “cup and ring” carving on bedrock is regarded as instance of E24 Physical Man-Made Thing.

Examples:

- the Forth Railway Bridge (E22)
- the Channel Tunnel (E25)
- the Historical Collection of the Museum Benaki in Athens (E78)

Properties:

[P62](#) depicts (is depicted by): [E1](#) CRM Entity
(P62.1 mode of depiction: [E55](#) Type)
[P65](#) shows visual item (is shown by): [E36](#) Visual Item
[P128](#) carries (is carried by): [E73](#) Information Object

E25 Man-Made Feature

Subclass of: [E24](#) Physical Man-Made Thing
[E26](#) Physical Feature

Scope Note: This class comprises physical features that are purposely created by human activity, such as scratches, artificial caves, artificial water channels, etc.

No assumptions are made as to the extent of modification required to justify regarding a feature as man-made. For example, rock art or even “cup and ring” carvings on bedrock are regarded as types of E25 Man-Made Feature.

Examples:

- the Manchester Ship Canal
- Michael Jackson’s nose following plastic surgery

E26 Physical Feature

Subclass of: [E18](#) Physical Thing
Superclass of: [E25](#) Man-Made Feature
[E27](#) Site

Scope Note: This class comprises identifiable features that are physically attached in an integral way to particular physical objects.

Instances of E26 Physical Feature share many of the attributes of instances of E19 Physical Object. They may have a one-, two- or three-dimensional geometric extent, but there are no natural borders that separate them completely in an objective way from the carrier objects. For example, a doorway is a feature but the door itself, being attached by hinges, is not.

Instances of E26 Physical Feature can be features in a narrower sense, such as scratches, holes, reliefs, surface colours, reflection zones in an opal crystal or a density change in a piece of wood. In the wider sense, they are portions of particular objects with partially imaginary borders, such as the core of the Earth, an area of property on the surface of the Earth, a landscape or the head of a contiguous marble statue. They can be measured and dated, and it is sometimes possible to state who or what is or was responsible for them. They cannot be separated from the carrier object, but a segment of the carrier object may be identified (or sometimes removed) carrying the complete feature.

This definition coincides with the definition of "fiat objects" (Smith & Varzi, 2000, pp.401-420), with the exception of aggregates of “bona fide objects”.

Examples:

- the temple in Abu Simbel before its removal, which was carved out of solid rock
- Albrecht Durer's signature on his painting of Charles the Great
- the damage to the nose of the Great Sphinx in Giza
- Michael Jackson’s nose prior to plastic surgery

E27 Site

Subclass of: [E26](#) Physical Feature

Scope Note: This class comprises pieces of land or sea floor.

In contrast to the purely geometric notion of E53 Place, this class describes constellations of matter on the surface of the Earth or other celestial body, which can be represented by photographs, paintings and maps.

Instances of E27 Site are composed of relatively immobile material items and features in a particular configuration at a particular location.

Examples:

- the Amazon river basin
- Knossos
- the Apollo 11 landing site
- Heathrow Airport
- the submerged harbour of the Minoan settlement of Gournia, Crete

E28 Conceptual Object

Subclass of: [E71](#) Man-Made Thing

Superclass of: [E30](#) Right
[E41](#) Appellation
[E55](#) Type
[E73](#) Information Object

Scope note: This class comprises non-material products of our minds and information produced by humans with or without using technical devices that have become objects of a discourse about their identity, circumstances of creation and historical implications.

Characteristically, instances of this class are created, invented or thought by someone, and then may be documented or communicated between persons. Instances of E28 Conceptual Object have the ability to exist on more than one particular carrier at the same time, such as papers, electronic signals, marks, audio media, paintings, photos, human memories, etc.

They cannot be destroyed as long as they exist on at least one carrier or in memory. Their existence ends when the last carrier is lost. A greater distinction can be made between products having a clear identity, such as a specific text, or photographs, and the ideas and concepts shared and traded by groups of people.

Examples:

- Beethoven's "Ode an die Freude" (Ode to Joy), (E73)
- the definition of "ontology" in the Oxford English Dictionary
- the knowledge about the victory at Marathon carried by the famous runner

Properties:

[P148](#) is identified by (identifies): [E75](#) Conceptual Object Appellation

E29 Design or Procedure

Subclass of: [E73](#) Information Object

Scope note: This class comprises documented plans for the execution of actions in order to achieve a result of a specific quality, form or contents. In particular it comprises plans for deliberate human activities that may result in the modification or production of instances of E24 Physical Thing.

Instances of E29 Design or Procedure can be structured in parts and sequences or depend on others. This is modelled using *P69 is associated with*.

Designs or procedures can be seen as one of the following:

1. A schema for the activities it describes
2. A schema of the products that result from their application.

3. An independent intellectual product that may have never been applied, such as Leonardo da Vinci's famous plans for flying machines.

Because designs or procedures may never be applied or only partially executed, the CRM models a loose relationship between the plan and the respective product.

Examples:

- the ISO standardisation procedure
- the musical notation for Beethoven's "Ode to Joy"
- the architectural drawings for the Kölner Dom in Cologne, Germany
- folio 860 of the Codex Atlanticus from Leonardo da Vinci, 1486-1490, kept in the Biblioteca Ambrosiana in Milan

Properties:

[P68](#) usually employs (is usually employed by): [E57](#) Material
[P69](#) is associated with: [E29](#) Design or Procedure

E30 Right

Subclass of: [E28](#) Conceptual Object

Scope Note: This class comprises legal privileges concerning material and immaterial things or their derivatives.

These include reproduction and property rights.

Examples:

- copyright held by ISO on ISO/CD 21127
- ownership of the "Mona Lisa" by the Louvre

E31 Document

Subclass of: [E73](#) Information Object

Superclass of: [E32](#) Authority Document

Scope note: This class comprises identifiable immaterial items that make propositions about reality.

These propositions may be expressed in text, graphics, images, audiograms, videograms or by other similar means. Documentation databases are regarded as a special case of E31 Document. This class should not be confused with the term "document" in Information Technology, which is compatible with E73 Information Object.

Examples:

- the Encyclopaedia Britannica (E32)
- the photo of the Allied Leaders at Yalta published by UPI, 1945
- the Doomsday Book

Properties:

[P70](#) documents (is documented in): [E1](#) CRM Entity

E32 Authority Document

Subclass of: [E31](#) Document

Scope note: This class comprises encyclopaedia, thesauri, authority lists and other documents that define terminology or conceptual systems for consistent use.

Examples:

- Webster's Dictionary
- Getty Art and Architecture Thesaurus
- the CIDOC Conceptual Reference Model

Properties:

[P71](#) lists (is listed in): [E55](#) Type

E33 Linguistic Object

Subclass of: [E73](#) Information Object

Superclass of: [E34](#) Inscription

[E35](#) Title

Scope note: This class comprises identifiable expressions in natural language or languages.

Instances of E33 Linguistic Object can be expressed in many ways: e.g. as written texts, recorded speech or sign language. However, the CRM treats instances of E33 Linguistic Object independently from the medium or method by which they are expressed. Expressions in formal languages, such as computer code or mathematical formulae, are not treated as instances of E33 Linguistic Object by the CRM. These should be modelled as instances of E73 Information Object.

The text of an instance of E33 Linguistic Object can be documented in a note by P3 has note: E62 String

Examples:

- the text of the Ellesmere Chaucer manuscript
- the lyrics of the song "Blue Suede Shoes"
- the text of the Jabberwocky by Lewis Carroll
- the text of "Doktoro Jekyll kaj Sinjoro Hyde" (an Esperanto translation of Dr Jekyll and Mr Hyde)

Properties:

[P72](#) has language (is language of): [E56](#) Language

[P73](#) has translation (is translation of): [E33](#) Linguistic Object

E34 Inscription

Subclass of: [E33](#) Linguistic Object

[E37](#) Mark

Scope note: This class comprises recognisable, short texts attached to instances of E24 Physical Man-Made Thing.

The transcription of the text can be documented in a note by *P3 has note: E62 String*. The alphabet used can be documented by *P2 has type: E55 Type*. This class does not intend to describe the idiosyncratic characteristics of an individual physical embodiment of an inscription, but the underlying prototype. The physical embodiment is modelled in the CRM as E24 Physical Man-Made Thing.

The relationship of a physical copy of a book to the text it contains is modelled using *E84 Information Carrier. P128 carries (is carried by): E33 Linguistic Object*.

Examples:

- “keep off the grass” on a sign stuck in the lawn of the quad of Balliol College
- The text published in Corpus Inscriptionum Latinarum V 895
- Kilroy was here

E35 Title

Subclass of: [E33](#) Linguistic Object
[E41](#) Appellation

Scope note: This class comprises the names assigned to works, such as texts, artworks or pieces of music.

Titles are proper noun phrases or verbal phrases, and should not be confused with generic object names such as “chair”, “painting” or “book” (the latter are common nouns and are modelled in the CRM as instances of E55 Type). Titles may be assigned by the creator of the work itself, or by a social group.

This class also comprises the translations of titles that are used as surrogates for the original titles in different social contexts.

Examples:

- The Merchant of Venice
- Mona Lisa
- La Pie or The Magpie
- Lucy in the Sky with Diamonds

E36 Visual Item

Subclass of: [E73](#) Information Object

Superclass of: [E37](#) Mark
[E38](#) Image

Scope Note: This class comprises the intellectual or conceptual aspects of recognisable marks and images.

This class does not intend to describe the idiosyncratic characteristics of an individual physical embodiment of a visual item, but the underlying prototype. For example, a mark such as the ICOM logo is generally considered to be the same logo when used on any number of publications. The size, orientation and colour may change, but the logo remains uniquely identifiable. The same is true of images that are reproduced many times. This means that visual items are independent of their physical support.

The class E36 Visual Item provides a means of identifying and linking together instances of E24 Physical Man-Made Thing that carry the same visual symbols, marks or images etc. The property *P62 depicts (is depicted by)* between E24 Physical Man-Made Thing and depicted subjects (E1 CRM Entity) can be regarded as a short-cut of the more fully developed path from E24 Physical Man-Made Thing through *P65 shows visual item (is shown by)*, E36 Visual Item, *P138 represents (has representation)* to E1 CRM Entity, which in addition captures the optical features of the depiction.

Examples:

- the visual appearance of Monet’s “La Pie” (E38)
- the Coca-Cola logo (E34)
- the Chi-Rho (E37)
- the communist red star (E37)

Properties:

**[P138](#) represents (has representation): [E1](#) CRM Entity
(P138.1 mode of representation: [E55](#) Type)**

E37 Mark

Subclass of: [E36](#) Visual Item

Superclass of: [E34](#) Inscription

Scope note: This class comprises symbols, signs, signatures or short texts applied to instances of E24 Physical Man-Made Thing by arbitrary techniques in order to indicate the creator, owner, dedications, purpose, etc.

This class specifically excludes features that have no semantic significance, such as scratches or tool marks. These should be documented as instances of E25 Man-Made Feature.

Examples:

- Minoan double axe mark
- ©
- ☺

E38 Image

Subclass of: [E36](#) Visual Item

Scope note: This class comprises distributions of form, tone and colour that may be found on surfaces such as photos, paintings, prints and sculptures or directly on electronic media.

The degree to which variations in the distribution of form and colour affect the identity of an instance of E38 Image depends on a given purpose. The original painting of the Mona Lisa in the Louvre may be said to bear the same instance of E38 Image as reproductions in the form of transparencies, postcards, posters or T-shirts, even though they may differ in size and carrier and may vary in tone and colour. The images in a “spot the difference” competition are not the same with respect to their context, however similar they may at first appear.

Examples:

- the front side of all 20 Swiss Frs notes
- the image depicted on all reproductions of the Mona Lisa

E39 Actor

Subclass of: [E77](#) Persistent Item

Superclass of: [E21](#) Person

[E74](#) Group

Scope note: This class comprises people, either individually or in groups, who have the potential to perform intentional actions for which they can be held responsible.

The CRM does not attempt to model the inadvertent actions of such actors. Individual people should be documented as instances of E21 Person, whereas groups should be documented as instances of either E74 Group or its subclass E40 Legal Body.

Examples:

- London and Continental Railways (E40)
- the Governor of the Bank of England in 1975 (E21)
- Sir Ian McKellan (E21)

Properties:

[P74](#) has current or former residence (is current or former residence of): [E53](#) Place
[P75](#) possesses (is possessed by): [E30](#) Right
[P76](#) has contact point (provides access to): [E51](#) Contact Point
[P131](#) is identified by (identifies): [E82](#) Actor Appellation

E40 Legal Body

Subclass of: [E74](#) Group

Scope Note: This class comprises institutions or groups of people that have obtained a legal recognition as a group and can act collectively as agents.

This means that they can perform actions, own property, create or destroy things and can be held collectively responsible for their actions like individual people. The term 'personne morale' is often used for this in French.

Examples

- Greenpeace
- Paveprime Ltd
- the National Museum of Denmark

E41 Appellation

Subclass of: [E28](#) Conceptual Object

Superclass of: [E35](#) Title
[E42](#) Identifier
[E44](#) Place Appellation
[E49](#) Time Appellation
[E51](#) Contact Point
[E75](#) Conceptual Object Appellation
[E82](#) Actor Appellation

Scope note: This class comprises all sequences of signs of any nature, either meaningful or not, that are used or can be used to refer to and identify a specific instance of some class within a certain context.

Instances of E41 Appellation do not identify things by their meaning, even if they happen to have one, but by convention, tradition, or agreement. Instances of E41 Appellation are cultural constructs; as such, they have a context, a history, and a use in time and space by some group of users. A given instance of E41 Appellation can have alternative forms, i.e., other instances of E41 Appellation that are always regarded as equivalent independent from the thing it denotes.

Specific subclasses of E41 Appellation should be used when instances of E41 Appellation of a characteristic form are used for particular objects. Instances of E49 Time Appellation, for example, which take the form of instances of E50 Date, can be easily recognised.

E41 Appellation should not be confused with the act of naming something. Cf. E15 Identifier Assignment

Examples:

- "Martin"
- "the Forth Bridge"
- "the Merchant of Venice" (E35)
- "*Spigelia marilandica* (L.) L." [not the species, just the *name*]

- "information science" [not the science itself, but the name through which we refer to it in an English-speaking context]
-

Properties:

[P139](#) has alternative form: [E41](#) Appellation

E42 Identifier

Subclass of: [E41](#) Appellation

Scope note: This class comprises strings or codes assigned to instances of E1 CRM Entity in order to identify them uniquely and permanently within the context of one or more organisations. Such codes are often known as inventory numbers, registration codes, etc. and are typically composed of alphanumeric sequences. The class E42 Identifier is not normally used for machine-generated identifiers used for automated processing unless these are also used by human agents.

Examples:

- "MM.GE.195"
- "13.45.1976"
- "OXCMS: 1997.4.1"
- ISSN "0041-5278"
- ISRC "FIFIN8900116"
- Shelf mark "Res 8 P 10"
- "Guillaume de Machaut (1300?-1377)" [a controlled personal name heading that follows the French rules]

E44 Place Appellation

Subclass of: [E41](#) Appellation

Superclass of [E45](#) Address
[E46](#) Section Definition
[E47](#) Spatial Coordinates
[E48](#) Place Name

Scope Note: This class comprises any sort of identifier characteristically used to refer to an E53 Place.

Instances of E44 Place Appellation may vary in their degree of precision and their meaning may vary over time - the same instance of E44 Place Appellation may be used to refer to several places, either because of cultural shifts, or because objects used as reference points have moved around. Instances of E44 Place Appellation can be extremely varied in form: postal addresses, instances of E47 Spatial Coordinate, and parts of buildings can all be considered as instances of E44 Place Appellation.

Examples:

- Vienna
- CH-1211, Genève
- Aquae Sulis Minerva
- Bath
- Cambridge
- the Other Place
- the City

E45 Address

Subclass of: [E44](#) Place Appellation
[E51](#) Contact Point

Scope Note: This class comprises identifiers expressed in coding systems for places, such as postal addresses used for mailing.

An E45 Address can be considered both as the name of an E53 Place and as an E51 Contact Point for an E39 Actor. This dual aspect is reflected in the multiple inheritance. However, some forms of mailing addresses, such as a postal box, are only instances of E51 Contact Point, since they do not identify any particular Place. These should not be documented as instances of E45 Address.

Examples:

- 1-29-3 Otsuka, Bunkyo-ku, Tokyo, 121, Japan
- Rue David Dufour 5, CH-1211, Genève

E46 Section Definition

Subclass of: [E44](#) Place Appellation

Scope Note: This class comprises areas of objects referred to in terms specific to the general geometry or structure of its kind.

The 'prow' of the boat, the 'frame' of the picture, the 'front' of the building are all instances of E46 Section Definition. The class highlights the fact that parts of objects can be treated as locations. This holds in particular for features without natural boundaries, such as the "head" of a marble statue made out of one block (cf. E53 Place). In answer to the question 'where is the signature?' one might reply 'on the lower left corner'. (Section Definition is closely related to the term "segment" in Gerstl, P.& Pribbenow, S, 1996 "A conceptual theory of part – whole relations and its applications", Data & Knowledge Engineering 20 305-322, North Holland-Elsevier).

Examples:

- the entrance lobby to the Ripley Center
- the poop deck of H.M.S Victory
- the Venus de Milo's left buttock
- left inner side of my box

E47 Spatial Coordinates

Subclass of: [E44](#) Place Appellation

Scope Note: This class comprises the textual or numeric information required to locate specific instances of E53 Place within schemes of spatial identification.

Coordinates are a specific form of E44 Place Appellation, that is, a means of referring to a particular E53 Place. Coordinates are not restricted to longitude, latitude and altitude. Any regular system of reference that maps onto an E19 Physical Object can be used to generate coordinates.

Examples:

- 6°5'29"N 45°12'13"W

- Black queen's bishop 4 [chess coordinate]

E48 Place Name

Subclass of: [E44](#) Place Appellation

Scope Note: This class comprises particular and common forms of E44 Place Appellation.

Place Names may change their application over time: the name of an E53 Place may change, and a name may be reused for a different E53 Place. Instances of E48 Place Name are typically subject to place name gazetteers.

Examples:

- Greece
- Athens
- Geneva
- Lac Léman

E49 Time Appellation

Subclass of: [E41](#) Appellation

Superclass of: [E50](#) Date

Scope Note: This class comprises all forms of names or codes, such as historical periods, and dates, which are characteristically used to refer to a specific E52 Time-Span.

The instances of E49 Time Appellation may vary in their degree of precision, and they may be relative to other time frames, "Before Christ" for example. Instances of E52 Time-Span are often defined by reference to a cultural period or an event e.g. 'the duration of the Ming Dynasty'.

Examples:

- Meiji [Japanese term for a specific time-span]
- 1st half of the XX century
- Quaternary
- 1215 Hegira [a date in the Islamic calendar]
- Last century

E50 Date

Subclass of: [E49](#) Time Appellation

Scope Note: This class comprises specific forms of E49 Time Appellation.

Dates may vary in their degree of precision.

Examples:

- 1900
- 4-4-1959
- 19-MAR-1922
- 19640604

E51 Contact Point

Subclass of: [E41](#) Appellation
Superclass of: [E45](#) Address

Scope Note: This class comprises identifiers employed, or understood, by communication services to direct communications to an instance of E39 Actor. These include E-mail addresses, telephone numbers, post office boxes, Fax numbers, etc. Most postal addresses can be considered both as instances of E44 Place Appellation and E51 Contact Point. In such cases the subclass E45 Address should be used..

Examples:

- +41 22 418 5571
- weasel@paveprime.com

E52 Time-Span

Subclass of: [E1](#) CRM Entity

Scope note: This class comprises abstract temporal extents, in the sense of Galilean physics, having a beginning, an end and a duration.

Time Span has no other semantic connotations. Time-Spans are used to define the temporal extent of instances of E4 Period, E5 Event and any other phenomena valid for a certain time. An E52 Time-Span may be identified by one or more instances of E49 Time Appellation.

Since our knowledge of history is imperfect, instances of E52 Time-Span can best be considered as approximations of the actual Time-Spans of temporal entities. The properties of E52 Time-Span are intended to allow these approximations to be expressed precisely. An extreme case of approximation, might, for example, define an E52 Time-Span having unknown beginning, end and duration. Used as a common E52 Time-Span for two events, it would nevertheless define them as being simultaneous, even if nothing else was known.

Automatic processing and querying of instances of E52 Time-Span is facilitated if data can be parsed into an E61 Time Primitive.

Examples:

- 1961
- From 12-17-1993 to 12-8-1996
- 14h30 – 16h22 4th July 1945
- 9.30 am 1.1.1999 to 2.00 pm 1.1.1999
- duration of the Ming Dynasty

Properties:

[P78](#) is identified by (identifies): [E49](#) Time Appellation

[P79](#) beginning is qualified by: [E62](#) String

[P80](#) end is qualified by: [E62](#) String

[P81](#) ongoing throughout: [E61](#) Time Primitive

[P82](#) at some time within: [E61](#) Time Primitive

[P83](#) had at least duration (was minimum duration of): [E54](#) Dimension

[P84](#) had at most duration (was maximum duration of): [E54](#) Dimension

[P86](#) falls within (contains): [E52](#) Time-Span

E53 Place

Subclass of: [E1](#) CRM Entity

Scope note: This class comprises extents in space, in particular on the surface of the earth, in the pure sense of physics: independent from temporal phenomena and matter.

The instances of E53 Place are usually determined by reference to the position of “immobile” objects such as buildings, cities, mountains, rivers, or dedicated geodetic marks. A Place can be determined by combining a frame of reference and a location with respect to this frame. It may be identified by one or more instances of E44 Place Appellation.

It is sometimes argued that instances of E53 Place are best identified by global coordinates or absolute reference systems. However, relative references are often more relevant in the context of cultural documentation and tend to be more precise. In particular, we are often interested in position in relation to large, mobile objects, such as ships. For example, the Place at which Nelson died is known with reference to a large mobile object – H.M.S Victory. A resolution of this Place in terms of absolute coordinates would require knowledge of the movements of the vessel and the precise time of death, either of which may be revised, and the result would lack historical and cultural relevance.

Any object can serve as a frame of reference for E53 Place determination. The model foresees the notion of a "section" of an E19 Physical Object as a valid E53 Place determination.

Examples:

- the extent of the UK in the year 2003
- the position of the hallmark on the inside of my wedding ring
- the place referred to in the phrase: “Fish collected at three miles north of the confluence of the Arve and the Rhone”
- here -> <-

Properties:

P87 is identified by (identifies): E44 Place Appellation

P88 consists of (forms part of): E53 Place

P89 falls within (contains): E53 Place

P121 overlaps with: E53 Place

P122 borders with: E53 Place

E54 Dimension

Subclass of: [E1](#) CRM Entity

Scope note: This class comprises quantifiable properties that are measured by some calibrated means and can be approximated by numerical values.

An instance of E54 Dimension is regarded as the true quantity, independent from its numerical approximation, e.g. in inches or in cm. The properties of the class E54 Dimension allow for expressing the numerical approximation. It is recommended to record all numerical approximations of instances of E54 Dimension as intervals of indeterminacy. Numerical approximations in archaic instances of E58 Measurement Unit used in historical records should be preserved. Equivalent instances corresponding to current knowledge should be recorded as additional instances of E54 Dimension as appropriate.

Examples:

- currency: £26.00
- length: 3.9-4.1 cm
- diameter 26 mm
- weight 150 lbs
- density: 0.85 gm/cc
- luminescence: 56 ISO lumens
- tin content: 0.46 %
- taille au garot: 5 hands
- calibrated C14 date: 2460-2720 years, etc

Properties:

[P90](#) has value: [E60](#) Number

[P91](#) has unit (is unit of): [E58](#) Measurement Unit

E55 Type

Subclass of: [E28](#) Conceptual Object

Superclass of: [E56](#) Language

[E57](#) Material

[E58](#) Measurement Unit

Scope note: This class comprises arbitrary concepts (universals) and provides a mechanism for organising them into a hierarchy.

This hierarchy is intended to duplicate the names of all the classes present in the model. This allows additional refinement, through subtyping, of those classes which do not require further analysis of their formal properties, but which nonetheless represent typological distinctions important to a given user group.

It should be noted that the Model does not make the distinction between classes and types known from some knowledge representation systems and object-oriented programming languages. The class E55 Type can be regarded as a metaclass (a class whose instances are universals), used to denote a user-defined specialization of some class or property of the Model, without introducing any additional formal properties for this specialization.

It reflects the characteristic use of the term “object type” for naming data fields in museum documentation and particularly the notion of typology in archaeology. It has however nothing to do with the term “type” in Natural History (cf. E83 Type Creation), but it includes the notion of a “taxon”.

Ideally, instances of the class E55 Type should be organised into thesauri, with scope notes, illustrations, etc. to clarify their meaning. In general, it is expected that different domains and cultural groups will develop different thesauri in parallel. Consistent reasoning on the expansion of subterms used in a thesaurus is possible insofar as it conforms to both the classes and the hierarchies of the model.

E56 Language, E57 Material and E58 Measurement Unit have been defined explicitly as elements of the E55 Type hierarchy because they are used categorically in the model without reference to instances of them, i.e. the Model does not foresee the description of instances of instances of them, e.g., the property instance “*P45 consists of* : gold” does not refer to a particular instance of gold.

Examples:

- weight, length, depth [types of E54 Dimension]
- portrait, sketch, animation [types of E38 image]
- French, English, German [E56]
- excellent, good, poor [types of E3 Condition State]
- Ford Model T, chop stick [types of E22 Man-Made Object]
- cave, doline, scratch [types of E26 Physical Feature]
- poem, short story [types of E33 Linguistic Object]
- wedding, earthquake, skirmish [types of E5 Event]

Properties:

[P127](#) has broader term (has narrower term): [E55](#) Type

[P137](#) is exemplified by (exemplifies): [E1](#) CRM Entity

[P137.1](#) in the taxonomic role: [E55](#) Type

E56 Language

Subclass of: [E55](#) Type

Scope note: This class is a specialization of E55 Type and comprises the natural languages in the sense of concepts.

This type is used categorically in the model without reference to instances of it, i.e. the Model does not foresee the description of instances of instances of E56 Language, e.g.: “instances of Mandarin Chinese”.

It is recommended that internationally or nationally agreed codes and terminology are used to denote instances of E56 Language, such as those defined in ISO 639:1988.

Examples:

- el [Greek]
- en [English]
- eo [Esperanto]
- es [Spanish]
- fr [French]

E57 Material

Subclass of: [E55](#) Type

Scope note: This class is a specialization of E55 Type and comprises the concepts of materials.

Instances of E57 Material may denote properties of matter before its use, during its use, and as incorporated in an object, such as ultramarine powder, tempera paste, reinforced concrete. Discrete pieces of raw-materials kept in museums, such as bricks, sheets of fabric, pieces of metal, should be modelled individually in the same way as other objects. Discrete used or processed pieces, such as the stones from Nefer Titi's temple, should be modelled as parts (cf. *P46 is composed of*).

This type is used categorically in the model without reference to instances of it, i.e. the Model does not foresee the description of instances of instances of E57 Material, e.g.: “instances of gold”.

It is recommended that internationally or nationally agreed codes and terminology are used.

Examples:

- brick
- gold
- aluminium
- polycarbonate
- resin

E58 Measurement Unit

Subclass of: [E55](#) Type

Scope Note: This class is a specialization of E55 Type and comprises the types of measurement units: feet, inches, centimetres, litres, lumens, etc.

This type is used categorically in the model without reference to instances of it, i.e. the Model does not foresee the description of instances of instances of E58 Measurement Unit, e.g.: “instances of cm”.

Système International (SI) units or internationally recognized non-SI terms should be used whenever possible. (ISO 1000:1992). Archaic Measurement Units used in historical records should be preserved.

Examples:

- cm [centimetre]
- km [kilometre]
- m [meter]
- m/s [meters per second]
- A [Ampere]
- GRD [Greek Drachme]
- °C [degrees centigrade]

E59 Primitive Value

Superclass of: [E60](#) Number
[E61](#) Time Primitive
[E62](#) String

Scope Note: This class comprises primitive values used as documentation elements, which are not further elaborated upon within the model.

As such they are not considered as elements within our universe of discourse. No specific implementation recommendations are made.

Examples:

- ABCDEFG
- 3.14
- 0
- 1921-01-01

E60 Number

Subclass of: [E59](#) Primitive Value

Scope Note: This class comprises any encoding of computable (algebraic) values such as integers, real numbers, complex numbers, vectors, tensors etc., including intervals of these values to express limited precision.

Numbers are fundamentally distinct from identifiers in continua, such as instances of E50 Date and E47 Spatial Coordinate, even though their encoding may be similar. Instances of E60 Number can be combined with each other in algebraic operations to yield other instances of E60 Number, e.g., $1+1=2$. Identifiers in continua may be combined with numbers expressing distances to yield new identifiers, e.g., $1924-01-31 + 2 \text{ days} = 1924-02-02$. Cf. E54 Dimension

Examples:

- 5
- $3+2i$
- $1.5e-04$
- (0.5, - 0.7,88)

E61 Time Primitive

Subclass of: [E59](#) Primitive Value

Scope Note: This class comprises instances of E59 Primitive Value for time that should be implemented with appropriate validation, precision and interval logic to express date ranges relevant to cultural documentation.

E61 Time Primitive is not further elaborated upon within the model.

Examples:

- 1994 – 1997
- 13 May 1768
- 2000/01/01 00:00:59.7
- 85th century BC

E62 String

Subclass of: [E59](#) Primitive Value

Scope Note: This class comprises the instances of E59 Primitive Values used for documentation such as free text strings, bitmaps, vector graphics, etc.

E62 String is not further elaborated upon within the model

Examples:

- the Quick Brown Fox Jumps Over the Lazy Dog
- 6F 6E 54 79 70 31 0D 9E

E63 Beginning of Existence

Subclass of: [E5](#) Event

Superclass of: [E12](#) Production

[E65](#) Creation

[E66](#) Formation

[E67](#) Birth

[E81](#) Transformation

Scope note: This class comprises events that bring into existence any E77 Persistent Item.

It may be used for temporal reasoning about things (intellectual products, physical items, groups of people, living beings) beginning to exist; it serves as a hook for determination of a terminus postquem and antequem.

Examples:

- the birth of my child
- the birth of Snoopy, my dog
- the calving of the iceberg that sank the Titanic
- the construction of the Eiffel Tower

Properties:

[P92](#) brought into existence (was brought into existence by): [E77](#) Persistent Item

E64 End of Existence

Subclass of: [E5](#) Event

Superclass of: [E6](#) Destruction

[E68](#) Dissolution
[E69](#) Death
[E81](#) Transformation

Scope note: This class comprises events that end the existence of any [E77](#) Persistent Item.

It may be used for temporal reasoning about things (physical items, groups of people, living beings) ceasing to exist; it serves as a hook for determination of a terminus postquem and antequem. In cases where substance from a Persistent Item continues to exist in a new form, the process would be documented by [E81](#) Transformation.

Examples:

- the death of Snoopy, my dog
- the melting of the snowman
- the burning of the Temple of Artemis in Ephesos by Herostratos in 356BC

Properties:

[P93](#) took out of existence (was taken out of existence by): [E77](#) Persistent Item

E65 Creation

Subclass of: [E7](#) Activity
[E63](#) Beginning of Existence
Superclass of: [E83](#) Type Creation

Scope note: This class comprises events that result in the creation of conceptual items or immaterial products, such as legends, poems, texts, music, images, movies, laws, types etc.

Examples:

- the framing of the U.S. Constitution
- the drafting of U.N. resolution 1441

Properties:

[P94](#) has created (was created by): [E28](#) Conceptual Object

E66 Formation

Subclass of: [E7](#) Activity
[E63](#) Beginning of Existence

Scope note: This class comprises events that result in the formation of a formal or informal [E74](#) Group of people, such as a club, society, association, corporation or nation.

E66 Formation does not include the arbitrary aggregation of people who do not act as a collective.

Examples:

- the formation of the CIDOC CRM Special Interest Group
- the formation of the Soviet Union
- the conspiring of the murderers of Caesar

Properties:

[P95](#) has formed (was formed by): [E74](#) Group

E67 Birth

Subclass of: [E63](#) Beginning of Existence

Scope note: This class comprises the birth of a human beings.

E67 Birth is a biological event focussing on the context of people coming into life. (E63 Beginning of Existence comprises the coming into life of any living beings).

Twins, triplets etc. are brought into life by the same E67 Birth event. The introduction of the E67 Birth event as a documentation element allows the description of a range of family relationships in a simple model. Suitable extensions may describe more details and the complexity of motherhood with the intervention of modern medicine. In this model, the biological father is not seen as a necessary participant in the E67 Birth event.

Examples:

- the birth of Alexander the Great

Properties:

[P96](#) by mother (gave birth): [E21](#) Person
[P97](#) from father (was father for): [E21](#) Person
[P98](#) brought into life (was born): [E21](#) Person

E68 Dissolution

Subclass of: [E64](#) End of Existence

Scope note: This class comprises the events that result in the formal or informal termination of an E74 Group of people.

If the dissolution was deliberate, the Dissolution event should also be instantiated as an E7 Activity.

Examples:

- the fall of the Roman Empire
- the liquidation of Enron Corporation

Properties:

[P99](#) dissolved (was dissolved by): [E74](#) Group

E69 Death

Subclass of: [E64](#) End of Existence

Scope note: This class comprises the deaths of human beings.

If a person is *killed*, their death should be instantiated as E69 Death and as E7 Activity. The death or perishing of other living beings should be documented using E64 End of Existence.

Examples:

- the murder of Julius Caesar (E69,E7)
- the death of Senator Paul Wellstone

Properties:

[P100](#) was death of (died in): [E21](#) Person

E70 Thing

Subclass of: [E77](#) Persistent Item
Superclass of: [E71](#) Man-Made Thing
[E72](#) Legal Object

Scope note: This general class comprises usable discrete, identifiable, instances of [E77](#) Persistent Item that are documented as single units.

They can be either intellectual products or physical things, and are characterized by relative stability. They may for instance either have a solid physical form, an electronic encoding, or they may be logical concept or structure.

Examples:

- my photograph collection ([E78](#))
- the pint of milk in my refrigerator
- the plan of the Stassburger Muenster
- the thing on the top of Otto Hahn's desk
- the design of the no-smoking sign ([E29](#))
- the cave of Dirou, Mani, Greece ([E27](#))

Properties

[P43](#) has dimension (is dimension of): [E54](#) Dimension
[P101](#) had as general use (was use of): [E55](#) Type
[P130](#) shows features of (features are also found on): [E70](#) Thing
([P130.1](#) kind of similarity: [E55](#) Type)

E71 Man-Made Thing

Subclass of: [E70](#) Thing
Superclass of: [E24](#) Physical Man-Made Thing
[E28](#) Conceptual Object

Scope note: This class comprises discrete, identifiable man-made items that are documented as single units.

These items are either intellectual products or man-made physical things, and are characterized by relative stability. They may for instance have a solid physical form, an electronic encoding, or they may be logical concepts or structures.

Examples:

- Beethoven's 5th Symphony ([E73](#))
- Michelangelo's David
- Einstein's Theory of General Relativity ([E73](#))
- the taxon '*Fringilla coelebs* Linnaeus, 1758' ([E55](#))

Properties

[P102](#) has title (is title of): [E35](#) Title
([P102.1](#) has type: [E55](#) Type)
[P103](#) was intended for (was intention of): [E55](#) Type

E72 Legal Object

Subclass of: [E70](#) Thing
Superclass of: [E18](#) Physical Thing
[E73](#) Information Object

Scope note: This class comprises those material or immaterial items to which instances of E30 Right, such as the right of ownership or use, can be applied.

This is true for all E18 Physical Thing. In the case of instances of E28 Conceptual Object, however, the identity of the E28 Conceptual Object or the method of its use may be too ambiguous to reliably establish instances of E30 Right, as in the case of taxa and inspirations. Ownership of corporations is currently regarded as out of scope of the CRM.

Examples:

- the Cullinan diamond (E19)
- definition of the CIDOC Conceptual Reference Model Version 2.1 (E73)

Properties:

[P104](#) is subject to (applies to): [E30](#) Right
[P105](#) right held by (has right on): [E39](#) Actor

E73 Information Object

Subclass of: [E28](#) Conceptual Object
[E72](#) Legal Object

Superclass of: [E29](#) Design or Procedure
[E31](#) Document
[E33](#) Linguistic Object
[E36](#) Visual Item

Scope note: This class comprises identifiable immaterial items, such as a poems, jokes, data sets, images, texts, multimedia objects, procedural prescriptions, computer program code, algorithm or mathematical formulae, that have an objectively recognizable structure and are documented as single units.

An E73 Information Object does not depend on a specific physical carrier, which can include human memory, and it can exist on one or more carriers simultaneously.

Instances of E73 Information Object of a linguistic nature should be declared as instances of the E33 Linguistic Object subclass. Instances of E73 Information Object of a documentary nature should be declared as instances of the E31 Document subclass. Conceptual items such as types and classes are not instances of E73 Information Object, nor are ideas without a reproducible expression.

Examples:

- image BM000038850.JPG from the Clayton Herbarium in London
- E. A. Poe's "The Raven"
- the movie "The Seven Samurai" by Akira Kurosawa
- the Maxwell Equations

Properties:

[P67](#) refers to (is referred to by): [E1](#) CRM Entity
([P67.1](#) has type: [E55](#) Type)
[P106](#) is composed of (forms part of): [E73](#) Information Object
[P129](#) is about (is subject of): [E1](#) CRM Entity

E74 Group

Subclass of: [E39](#) Actor
Superclass of: [E40](#) Legal Body

Scope note: This class comprises any gatherings or organizations of two or more people that act collectively or in a similar way due to any form of unifying relationship. In the wider sense

this class also comprises official positions which used to be regarded in certain contexts as one actor, independent of the current holder of the office, such as the president of a country.

A gathering of people becomes an E74 Group when it exhibits organizational characteristics usually typified by a set of ideas or beliefs held in common, or actions performed together. These might be communication, creating some common artifact, a common purpose such as study, worship, business, sports, etc. Nationality can be modeled as membership in an E74 Group (cf. HumanML markup). Married couples and other concepts of family are regarded as particular examples of E74 Group.

Examples:

- the impressionists
- the Navajo
- the Greeks
- the peace protestors in New York City on February 15 2003
- Exxon-Mobil
- King Solomon and his wives
- The President of the Swiss Confederation

Properties:

[P107](#) has current or former member (is current or former member of): [E39](#) Actor

E75 Conceptual Object Appellation

Subclass of: [E41](#) Appellation

Scope note: This class comprises all specific identifiers of intellectual products or standardized patterns.

Examples:

- ISBN 3-7913-1418-1
- ISO2788-1986 (E)

E77 Persistent Item

Subclass of: [E1](#) CRM Entity

Superclass of: [E39](#) Actor
[E70](#) Thing

Scope note: This class comprises items that have a persistent identity, sometimes known as “endurants” in philosophy.

They can be repeatedly recognized within the duration of their existence by identity criteria rather than by continuity or observation. Persistent Items can be either physical entities, such as people, animals or things, or conceptual entities such as ideas, concepts, products of the imagination or common names.

The criteria that determine the identity of an item are often difficult to establish -; the decision depends largely on the judgement of the observer. For example, a building is regarded as no longer existing if it is dismantled and the materials reused in a different configuration. On the other hand, human beings go through radical and profound changes during their life-span, affecting both material composition and form, yet preserve their identity by other criteria. Similarly, inanimate objects may be subject to exchange of parts and matter. The class E77 Persistent Item does not take any position about the nature of the applicable identity criteria and if actual knowledge about identity of an instance of this class exists. There may be cases, where the identity of an E77 Persistent Item is not decidable by a certain state of knowledge.

The main classes of objects that fall outside the scope the E77 Persistent Item class are temporal objects such as periods, events and acts, and descriptive properties.

Examples:

- Leonard da Vinci
- Stonehenge
- the hole in the ozone layer
- the First Law of Thermodynamics
- the Bermuda Triangle

E78 Collection

Subclass of: [E24](#) Physical Man-Made Thing

Scope note: This class comprises aggregations of physical items that are assembled and maintained (“curated” and “preserved,” in museological terminology) by one or more instances of E39 Actor over time for a specific purpose and audience, and according to a particular collection development plan.

Items may be added or removed from an E78 Collection in pursuit of this plan. This class should not be confused with the E39 Actor maintaining the E78 Collection often referred to with the name of the E78 Collection (e.g. “The Wallace Collection decided...”).

Collective objects in the general sense, like a tomb full of gifts, a folder with stamps or a set of chessmen, should be documented as instances of E19 Physical Object, and not as instances of E78 Collection. This is because they form wholes either because they are physically bound together or because they are kept together for their functionality.

Examples:

- the John Clayton Herbarium
- the Wallace Collection

Properties:

[P109](#) has current or former curator (is current or former curator of): [E39](#) Actor

E79 Part Addition

Subclass of: [E11](#) Modification

Scope note: This class comprises activities that result in an instance of E24 Physical Man-Made Thing being increased, enlarged or augmented by the addition of a part.

Typical scenarios include the attachment of an accessory, the integration of a component, the addition of an element to an aggregate object, or the accessioning of an object into a curated E78 Collection. Objects to which parts are added are, by definition, man-made, since the addition of a part implies a human activity. Following the addition of parts, the resulting man-made assemblages are treated objectively as single identifiable wholes, made up of constituent or component parts bound together either physically (for example the engine becoming a part of the car), or by sharing a common purpose (such as the 32 chess pieces that make up a chess set). This class of activities forms a basis for reasoning about the history and continuity of identity of objects that are integrated into other objects over time, such as precious gemstones being repeatedly incorporated into different items of jewellery, or cultural artifacts being added to different museum instances of E78 Collection over their lifespan.

Examples:

- the setting of the koh-i-noor diamond into the crown of Queen Elizabeth the Queen Mother
- the addition of the painting “Room in Brooklyn” by Edward Hopper to the collection of the Museum of Fine Arts, Boston

Properties:

[P110](#) augmented (was augmented by): [E24](#) Physical Man-Made Thing
[P111](#) added (was added by): [E18](#) Physical Thing

E80 Part Removal

Subclass of: [E11](#) Modification

Scope note: This class comprises the activities that result in an instance of E18 Physical Thing being decreased by the removal of a part.

Typical scenarios include the detachment of an accessory, the removal of a component or part of a composite object, or the deaccessioning of an object from a curated E78 Collection. If the E80 Part Removal results in the total decomposition of the original object into pieces, such that the whole ceases to exist, the activity should instead be modelled as an E81 Transformation, i.e. a simultaneous destruction and production. In cases where the part removed has no discernible identity prior to its removal but does have an identity subsequent to its removal, the activity should be regarded as both E80 Part Removal and E12 Production. This class of activities forms a basis for reasoning about the history, and continuity of identity over time, of objects that are removed from other objects, such as precious gemstones being extracted from different items of jewelry, or cultural artifacts being deaccessioned from different museum collections over their lifespan.

Examples:

- the removal of the engine from my car
- the disposal of object number 1976:234 from the collection

Properties:

[P112](#) diminished (was diminished by): [E24](#) Physical Man-Made Thing
[P113](#) removed (was removed by): [E18](#) Physical Thing

E81 Transformation

Subclass of: [E63](#) Beginning of Existence
[E64](#) End of Existence

Scope note: This class comprises the events that result in the simultaneous destruction of one E77 Persistent Item and the creation of another E77 Persistent Item that preserves recognizable substance from the first but has a fundamentally different nature and identity.

Although the two instances of E77 Persistent Item are treated as discrete entities having separate, unique identities, they are causally connected through the E81 Transformation; the destruction of the first E77 Persistent Item directly causes the creation of the second using or preserving some relevant substance. Instances of E81 Transformation are therefore distinct from re-classifications (documented using E17 Type Assignment) or modifications (documented using E11 Modification) of objects that do not fundamentally change their nature or identity. Characteristic cases are reconstructions and repurposing of historical buildings or ruins, fires leaving buildings in ruins, taxidermy of specimen in natural history and the reorganization of a corporate body into a new one.

Examples:

- the death and mummification of Tut Ankh Amun (transformation of Tut Ankh Amun from a living person to a mummy)

Properties:

[P123](#) resulted in (resulted from): [E77](#) Persistent Item
[P124](#) transformed (was transformed by): [E77](#) Persistent Item

E82 Actor Appellation

Subclass of: [E41](#) Appellation

Scope note: This class comprises any sort of name, number, code or symbol characteristically used to identify an E39 Actor.

An E39 Actor will typically have more than one E82 Actor Appellation, and instances of E82 Actor Appellation in turn may have alternative representations. The distinction between corporate and personal names, which is particularly important in library applications, should be made by explicitly linking the E82 Actor Appellation to an instance of either E21 Person or E74 Group/E40 Legal Body. If this is not possible, the distinction can be made through the use of the *P2 has type* mechanism.

Examples:

- John Doe
- Doe, J.
- the U.S. Social Security Number 246-14-2304
- the Artist Formerly Known as Prince
- the Master of the Flemish Madonna
- Raphael's Workshop
- the Brontë Sisters
- ICOM
- International Council of Museums

E83 Type Creation

Subclass of: [E65](#) Creation

Scope note: This class comprises activities formally defining new types of items.

It is typically a rigorous scholarly or scientific process that ensures a type is exhaustively described and appropriately named. In some cases, particularly in archaeology and the life sciences, E83 Type Creation requires the identification of an exemplary specimen and the publication of the type definition in an appropriate scholarly forum. The activity of E83 Type Creation is central to research in the life sciences, where a type would be referred to as a "taxon," the type description as a "protologue," and the exemplary specimens as "original element" or "holotype".

Examples:

- creation of the taxon '*Penicillium brefeldianum* B. O. Dodge' (1933)
- addition of class E84 Information Carrier to the CIDOC CRM

Properties:

[P135](#) created type (was created by): [E55](#) Type
[P136](#) was based on (supported type creation): [E1](#) CRM Entity
[P136.1](#) in the taxonomic role: [E55](#) Type

E84 Information Carrier

Subclass of: [E22](#) Man-Made Object

Scope note: This class comprises all instances of E22 Man-Made Object that are explicitly designed to act

as persistent physical carriers for instances of E73 Information Object.

This allows a relationship to be asserted between an E19 Physical Object and its immaterial information contents. An E84 Information Carrier may or may not contain information, e.g., a diskette. Note that any E18 Physical Thing may carry information, such as an E34 Inscription. However, unless it was specifically designed for this purpose, it is not an Information Carrier. Therefore the property *P128 carries (is carried by)* applies to E18 Physical Thing in general.

Examples:

- the Rosetta Stone
- my paperback copy of Crime & Punishment
- the computer disk at ICS-FORTH that stores the canonical Definition of the CIDOC CRM

E85 Joining

Subclass of: [E7](#) Activity

Scope note: This class comprises the activities that result in an instance of E49 Actor becoming a member of an instance of E74 Group. This class does not imply initiative by either party.

Typical scenarios include becoming a member of a social organisation, becoming employee of a company, marriage, the adoption of a child by a family and the inauguration of somebody into an official position.

Examples:

- The election of Sir Isaac Newton as Member of Parliament for the University of Cambridge to the Convention Parliament of 1689
- The inauguration of Mikhail Sergeyevich Gorbachev as leader of the Union of Soviet Socialist Republics (USSR) in 1985

Properties:

[P143](#) joined (was joined by): [E39](#) Actor
[P144](#) joined with (gained member by) [E74](#) Group

E86 Leaving

Subclass of: [E7](#) Activity

Scope note: This class comprises the activities that result in an instance of E39 Actor to be disassociated from an instance of E74 Group. This class does not imply initiative by either party. Typical scenarios include the termination of membership in a social organisation, ending the employment at a company, divorce, and the end of tenure of somebody in an official position.

Examples:

- The end of Sir Isaac Newton's duty as Member of Parliament for the University of Cambridge to the Convention Parliament in 1702
- George Washington's leaving office in 1797

Properties:

[P145](#) separated (left by) [E39](#) Actor
[P146](#) separated from (lost member by) [E74](#) Group

E87 Curation Activity

Subclass of: [E7](#) Activity

Scope note: This class comprises activities of managing the preservation and evolution of an instance of E78 Collection, following some implicit or explicit curation plan. It specializes the notion of activity into the curation of a collection and allows the history of curation to be recorded.

Items are accumulated and organized following criteria like subject, chronological period, material type, style of art etc. and can be added or removed from an E78 Collection for a specific purpose and/or audience. The initial aggregation of items of a collection is regarded as an instance of E12 Production Event while the activity of evolving, preserving and promoting a collection is regarded as an instance of E87 *Curation Activity*.

?

Examples:

Properties:

P147 curated (was curated by): E78 Collection

CIDOC CRM Property Declarations

The properties of the CRM are comprehensively declared in this section using the following format:

- Property names are presented as headings in bold face, preceded by unique property identifiers;
- The line “Domain:” declares the class for which the property is defined;
- The line “Range:” declares the class to which the property points, or that provides the values for the property;
- The line “Superproperty of:” is a cross-reference to any subproperties the property may have;
- The line “Quantification:” declares the possible number of occurrences for domain and range class instances for the property. Possible values are: 1:many, many:many, many:1;
- The line “Scope note:” contains the textual definition of the concept the property represents;
- The line “Examples:” contains a bulleted list of examples of instances of this property. If the example is also instance of a subproperty of this property, the unique identifier of the subclass is added in parenthesis. If the example instantiates two properties, the unique identifiers of both properties is added in parenthesis.
The line “Examples:” provides illustrative examples showing how the property should be used.

P1 is identified by (identifies)

Domain: [E1](#) CRM Entity
Range: [E41](#) Appellation
Superproperty of: [E1](#) CRM Entity. [P48](#) has preferred identifier (is preferred identifier of): [E42](#) Identifier
[E52](#) Time-Span. [P78](#) is identified by (identifies): [E49](#) Time Appellation
[E53](#) Place. [P87](#) is identified by (identifies): [E44](#) Place Appellation
[E71](#) Man-Made Thing. [P102](#) has title (is title of): [E35](#) Title
[E39](#) Actor. [P131](#) is identified by (identifies): [E82](#) Actor Appellation

Quantification: many to many (0,n:0,n)

Scope note: This property describes the naming or identification of any real world item by a name or any other identifier.

This property is intended for identifiers in general use, which form part of the world the model intends to describe, and not merely for internal database identifiers which are specific to a technical system, unless these latter also have a more general use outside the technical context. This property includes in particular identification by mathematical expressions such as coordinate systems used for the identification of instances of [E53](#) Place. The property does not reveal anything about when, where and by whom this identifier was used. A more detailed representation can be made using the fully developed (i.e. indirect) path through [E15](#) Identifier Assignment.

Examples:

- the capital of Italy ([E53](#)) *is identified by* “Rome” ([E48](#))
- text 25014–32 ([E33](#)) *is identified by* “The Decline and Fall of the Roman Empire” ([E35](#))

P2 has type (is type of)

Domain: [E1](#) CRM Entity
Range: [E55](#) Type
Quantification: many to many (0,n:0,n)

Scope note: This property allows sub typing of CRM entities - a form of specialisation – through the use of a terminological hierarchy, or thesaurus.

The CRM is intended to focus on the high-level entities and relationships needed to describe data structures. Consequently, it does not specialise entities any further than is required for this immediate purpose. However, entities in the isA hierarchy of the CRM may be specialised into any number of sub entities, which can be defined in the [E55](#) Type hierarchy. [E51](#) Contact Point, for example, may be specialised into “e-mail address”, “telephone number”, “post office box”, “URL” etc. none of which figures explicitly in the CRM hierarchy. Sub typing obviously requires consistency between the meaning of the terms assigned and the more general intent of the CRM entity in question.

Examples:

- www.cidoc.icom.org ([E51](#)) *has type* URL ([E55](#))

P3 has note

Domain: [E1](#) CRM Entity
Range: [E62](#) String
Superproperty of: [E52](#) Time-Span. [P79](#) beginning is qualified by: [E62](#) String
[E52](#) Time-Span. [P80](#) end is qualified by: [E62](#) String
Quantification: one to many (0,n:0,1)

Scope note: This property is a container for all informal descriptions about an object that have not been expressed in terms of CRM constructs.

In particular it captures the characterisation of the item itself, its internal structures, appearance etc.

Like property *P2 has type (is type of)*, this property is a consequence of the restricted focus of the CRM. The aim is not to capture, in a structured form, everything that can be said about an item; indeed, the CRM formalism is not regarded as sufficient to express everything that can be said. Good practice requires use of distinct note fields for different aspects of a characterisation. The *P3.1 has type* property of *P3 has note* allows differentiation of specific notes, e.g. “construction”, “decoration” etc.

An item may have many notes, but a note is attached to a specific item.

Examples:

- coffee mug – OXCMS:1983.1.1 (E19) *has note* “chipped at edge of handle” (E62) *has type* Condition (E55)

Properties: P3.1 has type: [E55](#) Type

P4 has time-span (is time-span of)

Domain: [E2](#) Temporal Entity

Range: [E52](#) Time-Span

Quantification: many to one, necessary, dependent (1,1:1,n)

Scope note: This property describes the temporal confinement of an instance of an E2 Temporal Entity.

The related E52 Time-Span is understood as the real Time-Span during which the phenomena were active, which make up the temporal entity instance. It does not convey any other meaning than a positioning on the “time-line” of chronology. The Time-Span in turn is approximated by a set of dates (E61 Time Primitive). A temporal entity can have in reality only one Time-Span, but there may exist alternative opinions about it, which we would express by assigning multiple Time-Spans. Related temporal entities may share a Time-Span. Time-Spans may have completely unknown dates but other descriptions by which we can infer knowledge.

Examples:

- the Yalta Conference (E7) *has time-span* Yalta Conference time-span (E52), *ongoing throughout* 11 February 1945 (E61)

P5 consists of (forms part of)

Domain: [E3](#) Condition State

Range: [E3](#) Condition State

Quantification: one to many (0,n:0,1)

Scope note: This property describes the decomposition of an E3 Condition State into discrete, subsidiary states.

It is assumed that the sub-states into which the condition state is analysed form a logical whole - although the entire story may not be completely known – and that the sub-states are in fact constitutive of the general condition state. For example, a general condition state of “in ruins” may be decomposed into the individual stages of decay.

Examples:

- Ruination of the Tower of Babylon (E3) *consists of* wind-erosion phase (E3)

P7 took place at (witnessed)

Domain: [E4](#) Period
Range: [E53](#) Place
Superproperty of: [E9](#) Move. [P26](#) moved to (was destination of): [E53](#) Place
[E9](#) Move. [P27](#) moved from (was origin of): [E53](#) Place
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property describes the spatial location of an instance of E4 Period.

The related E53 Place should be seen as an approximation of the geographical area within which the phenomena that characterise the period in question occurred. *P7took place at (witnessed)* does not convey any meaning other than spatial positioning (generally on the surface of the earth). For example, the period “Révolution française” can be said to have taken place in “France”, the “Victorian” period, may be said to have taken place in “Britain” and its colonies, as well as other parts of Europe and north America. A period can take place at multiple locations.

Examples:

- the period “Révolution française” (E4) *took place at* France (E53)

P8 took place on or within (witnessed)

Domain: [E4](#) Period
Range: [E19](#) Physical Object
Quantification: many to many (0,n:0,n)

Scope note: This property describes the location of an instance of E4 Period with respect to an E19 Physical Object.

P8 took place on or within (witnessed) is a short-cut of a path defining a E53 Place with respect to the geometry of an object. cf. E46 Section Definition.

This property is in effect a special case of *P7 took place at*. It describes a period that can be located with respect to the space defined by an E19 Physical Object such as a ship or a building. The precise geographical location of the object during the period in question may be unknown or unimportant.

For example, the French and German armistice of 22 June 1940 was signed in the same railway carriage as the armistice of 11 November 1918.

Examples:

- the coronation of Queen Elizabeth II (E7) *took place on or within* Westminster Abbey (E19)

P9 consists of (forms part of)

Domain: [E4](#) Period
Range: [E4](#) Period
Quantification: one to many, (0,n:0,1)

Scope note: This property describes the decomposition of an instance of E4 Period into discrete, subsidiary periods.

The sub-periods into which the period is decomposed form a logical whole - although the entire picture may not be completely known - and the sub-periods are constitutive of the general period.

Examples:

- Cretan Bronze Age (E4) *consists of* Middle Minoan (E4)

P10 falls within (contains)

Domain: [E4](#) Period
Range: [E4](#) Period
Quantification: many to many (0,n:0,n)

Scope note: This property describes an instance of E4 Period, which falls within the E53 Place and E52 Time-Span of another.

The difference with *P9 consists of (forms part of)* is subtle. Unlike *P9 consists of (forms part of)*, *P10 falls within (contains)* does not imply any logical connection between the two periods and it may refer to a period of a completely different type.

Examples:

- the Great Plague (E4) *falls within* The Gothic period (E4)

P11 had participant (participated in)

Domain: [E5](#) Event
Range: [E39](#) Actor
Subproperty of: E5 Event. P12 occurred in the presence of (was present at): E77 Persistent Item
Superproperty of: E7 Activity. P14 carried out by (performed): E39 Actor
E67 Birth. P96 by mother (gave birth): E21 Person
E68 Dissolution. P99 dissolved (was dissolved by): E74 Group
Quantification: many to many (0,n:0,n)

Scope note: This property describes the active or passive participation of instances of E39 Actors in an E5 Event.

It connects the life-line of the related E39 Actor with the E53 Place and E50 Date of the event. The property implies that the Actor was involved in the event but does not imply any causal relationship. The subject of a portrait can be said to have participated in the creation of the portrait.

Examples:

- Napoleon (E21) *participated in* The Battle of Waterloo (E7)
- Or
- Maria (E21) *participated in* Photographing of Maria (E7)

P12 occurred in the presence of (was present at)

Domain: [E5](#) Event
Range: [E77](#) Persistent Item
Superproperty of: [E5](#) Event. [P11](#) had participant (participated in): [E39](#) Actor
[E7](#) Activity. [P16](#) used specific object (was used for): [E70](#) Thing
[E9](#) Move. [P25](#) moved (moved by): [E19](#) Physical Object
[E11](#) Modification. [P31](#) has modified (was modified by): [E24](#) Physical Man-Made Thing
[E11](#) Modification. [P33](#) used specific technique (was used by): [E29](#) Design or Procedure
[E63](#) Beginning of Existence. [P92](#) brought into existence (was brought into existence by): [E77](#) Persistent Item
[E64](#) End of Existence. [P93](#) took out of existence (was taken out of existence by): [E77](#) Persistent Item
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property describes the active or passive presence of an E77 Persistent Item in an E5 Event

without implying any specific role.

It connects the history of a thing with the E53 Place and E50 Date of an event. For example, an object may be the desk, now in a museum on which a treaty was signed. The presence of an immaterial thing implies the presence of at least one of its carriers.

Examples:

- Deckchair 42 (E19) *was present at* The sinking of the Titanic (E5)

P13 destroyed (was destroyed by)

Domain: [E6](#) Destruction

Range: [E18](#) Physical Thing

Subproperty of: [E64](#) End of Existence. [P93](#) took out of existence (was taken out of existence by): [E77](#)
Persistent Item

Quantification: one to many, necessary (1,n:0,1)

Scope note: This property allows specific instances of E18 Physical Thing that have been destroyed to be related to a destruction event.

Destruction implies the end of an item's life as a subject of cultural documentation – the physical matter of which the item was composed may in fact continue to exist. A destruction event may be contiguous with a Production that brings into existence a derived object composed partly of matter from the destroyed object.

Examples:

- the Tay Bridge Disaster (E6) *destroyed* The Tay Bridge (E22)

P14 carried out by (performed)

Domain: [E7](#) Activity

Range: [E39](#) Actor

Subproperty of: [E5](#) Event. [P11](#) had participant (participated in): [E39](#) Actor

Superproperty of: [E8](#) Acquisition. [P22](#) transferred title to (acquired title through): [E39](#) Actor

[E8](#) Acquisition. [P23](#) transferred title from (surrendered title through): [E39](#) Actor

[E10](#) Transfer of Custody. [P28](#) custody surrendered by (surrendered custody through): [E39](#) Actor

[E10](#) Transfer of Custody. [P29](#) custody received by (received custody through): [E39](#) Actor

Quantification: many to many, necessary (1,n:0,n)

Scope note: This property describes the active participation of an E39 Actor in an E7 Activity.

It implies causal or legal responsibility. The *P14.1 in the role of* property of the property allows the nature of an Actor's participation to be specified.

Examples:

- the painting of the Sistine Chapel (E7) *was carried out by* Michaelangelo Buonaroti (E21) *in the role of* master craftsman (E55)

Properties: **P14.1 in the role of:** [E55](#) Type

P15 was influenced by (influenced)

Domain: [E7](#) Activity

Range: [E1](#) CRM Entity

Superproperty of: [E7](#) Activity. [P16](#) used specific object (was used for): [E70](#) Thing

[E7](#) Activity. [P17](#) was motivated by (motivated): [E1](#) CRM Entity

[E11](#) Modification. [P33](#) used specific technique (was used by): [E29](#) Design or Procedure

[E7](#) Activity. [P134](#) continued (was continued by): [E7](#) Activity

[E83](#) Type Creation. [P136](#) was based on (supported type creation): [E1](#) CRM Entity

Quantification: many to many (0,n:0,n)

Scope note: This is a high level property, which captures the relationship between an E7 Activity and anything that may have had some bearing upon it.

The property has more specific sub properties.

Examples:

- the designing of the Sydney Harbour Bridge (E7) *was influenced by* the Tyne bridge (E22)

P16 used specific object (was used for)

Domain: [E7](#) Activity

Range: [E70](#) Thing

Subproperty of: [E5](#) Event. [P12](#) occurred in the presence of (was present at): [E77](#) Persistent Item
[E7](#) Activity. [P15](#) was influenced by (influenced): [E1](#) CRM Entity

Superproperty of: [E7](#) Activity. [P33](#) used specific technique (was used by): [E29](#) Design or Procedure
[E15](#) Identifier Assignment. [P142](#) used constituent (was used in): [E41](#) Appellation

Quantification: many to many (0,n:0,n)

Scope note: This property describes the use of material or immaterial things in a way essential to the performance or the outcome of an E7 Activity.

This property typically applies to tools, instruments, moulds, raw materials and items embedded in a product. It implies that the presence of the object in question was a necessary condition for the action. For example, the activity of writing this text required the use of a computer. An immaterial thing can be used if at least one of its carriers is present. For example, the software tools on a computer.

Examples:

- the writing of this scope note (E7) *used specific object* Nicholas Crofts' computer (E22)
mode of use Typing Tool; Storage Medium (E55)

Properties: **P16.1 mode of use:** [E55](#) Type

P17 was motivated by (motivated)

Domain: [E7](#) Activity

Range: [E1](#) CRM Entity

Subproperty of: [E7](#) Activity. [P15](#) was influenced by (influenced): [E1](#) CRM Entity

Quantification: many to many (0,n:0,n)

Scope note: This property describes an item or items that are regarded as a reason for carrying out the E7 Activity.

For example, the discovery of a large hoard of treasure may call for a celebration, an order from head quarters can start a military manoeuvre.

Examples:

- the resignation of the chief executive (E7) *was motivated by* the collapse of SwissAir (E68).
- the coronation of Elizabeth II (E7) *was motivated by* the death of George VI (E69)

P19 was intended use of (was made for):

Domain: [E7](#) Activity

Range: [E71](#) Man-Made Thing

Quantification: many to many (0,n:0,n)

Scope note: This property relates an E7 Activity with objects created specifically for use in the activity.

This is distinct from the intended use of an item in some general type of activity such as the book of common prayer which was intended for use in Church of England services (see *P101 had as general use (was use of)*).

Examples:

- Lady Diana Spencer's wedding dress (E71) *was made for* Wedding of Prince Charles and Lady Diana Spencer (E7) *mode of use* To Be Worn (E55)

Properties: P19.1 mode of use: [E55](#) Type

P20 had specific purpose (was purpose of)

Domain: [E7](#) Activity

Range: [E7](#) Activity

Quantification: many to many (0,n:0,n)

Scope note: This property describes the relationship between a preparatory activity and the activity it is intended for.

This may involve activities in preparation for other activities, or orders and other organisational activities, which lead to some other specific activity.

P20 had specific purpose (was purpose of) does not imply that an activity succeeded in achieving its aims. For example, dubious accounting practices may be carried out with the specific purpose of enhancing share values and enabling a take-over bid. The specific purpose remains the same even if the strategy fails and the company goes bankrupt instead.

Examples:

- Van Eyck's pigment grinding (E7) *had specific purpose* the painting of the Ghent alter piece (E12)

P21 had general purpose (was purpose of)

Domain: [E7](#) Activity

Range: [E55](#) Type

Quantification: many to many (0,n:0,n)

Scope note: This property describes an intentional relationship between an E7 Activity and some general goal or purpose.

This may involve activities intended as preparation for some type of activity. For example, a musician practices an instrument in order to develop his or her musical ability, Van Eyck ground pigments and prepared oil paints in order to paint oil paintings. I travel to Oxford in order to work more effectively face-to-face rather than by email and telephone. *P21 had general purpose (was purpose of)* differs from *P20 had specific purpose (was purpose of)* in that no specific activity is implied as the purpose. E7 Activity does not imply that an activity succeeds in achieving its general aims.

Examples:

- Van Eyck's pigment grinding (E7) *had general purpose* painting (E55)

P22 transferred title to (acquired title through)

Domain: [E8](#) Acquisition

Range: [E39](#) Actor

Subproperty of: [E7 Activity](#)E7 Activity. [P14](#) carried out by (performed): [E39 Actor](#)
Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E39 Actor that acquires the legal ownership of an object as a result of an E8 Acquisition.

The property will typically describe an Actor purchasing or otherwise acquiring an object from another Actor. However, title may also be acquired, without any corresponding loss of title by another Actor, through legal fieldwork such as hunting, shooting or fishing.

In reality the title is either transferred to or from someone, or both.

Examples:

- acquisition of the Amoudrouz collection by the Geneva Ethnography Museum (E8) *transferred title to* Geneva Ethnography Museum (E74)

P23 transferred title from (surrendered title through)

Domain: [E8 Acquisition](#)
Range: [E39 Actor](#)
Subproperty of: [E7 Activity](#). [P14](#) carried out by (performed): [E39 Actor](#)
Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E39 Actor or Actors who relinquish legal ownership as the result of an E8 Acquisition.

The property will typically be used to describe a person donating or selling an object to a museum. In reality title is either transferred to or from someone, or both.

Examples:

- acquisition of the Amoudrouz collection by the Geneva Ethnography Museum (E8) *transferred title from* Heirs of Amoudrouz (E74)

P24 transferred title of (changed ownership through)

Domain: [E8 Acquisition](#)
Range: [E18 Physical Thing](#)
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E19 Physical Object or objects involved in an E8 Acquisition.

In reality, an acquisition must refer to at least one transferred item.

Examples:

- acquisition of the Amoudrouz collection by the Geneva Ethnography Museum (E8) *transferred title of* Amoudrouz Collection (E78)

P25 moved (moved by)

Domain: [E9 Move](#)
Range: [E19 Physical Object](#)
Subproperty of: [E5 Event](#). [P12](#) occurred in the presence of (was present at): [E77 Persistent Item](#)
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E19 Physical Object that is moved during a move event.

The property implies the object's passive participation. For example, Monet's painting "Impression sunrise" was moved for the first Impressionist exhibition in 1874.

In reality, a move must concern at least one object.

Examples:

- Monet's "Impression sunrise" (E22) *moved by* preparations for the First Impressionist Exhibition (E9)

P26 moved to (was destination of)

Domain: [E9](#) Move
Range: [E53](#) Place
Subproperty of: [E4](#) Period. [P7](#) took place at (witnessed): [E53](#) Place
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the destination of a E9 Move.

A move will be linked to a destination, such as the move of an artefact from storage to display. A move may be linked to many terminal instances of E53 Places. In this case the move describes a distribution of a set of objects. The area of the move includes the origin, route and destination.

Examples:

- the movement of the Tutankhamun Exhibition (E9) *moved to* The British Museum (E53)

P27 moved from (was origin of)

Domain: [E9](#) Move
Range: [E53](#) Place
Subproperty of: [E4](#) Period. [P7](#) took place at (witnessed): [E53](#) Place
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the starting E53 Place of an E9 Move.

A move will be linked to an origin, such as the move of an artefact from storage to display. A move may be linked to many origins. In this case the move describes the picking up of a set of objects. The area of the move includes the origin, route and destination.

Examples:

- the movement of the Tutankhamun Exhibition (E9) *moved from* The Egyptian Museum in Cairo (E53)

P28 custody surrendered by (surrendered custody through)

Domain: [E10](#) Transfer of Custody
Range: [E39](#) Actor
Subproperty of: [E7](#) Activity. [P14](#) carried out by (performed): [E39](#) Actor
Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E39 Actor or Actors who surrender custody of an instance of E18 Physical Thing in an E10 Transfer of Custody activity.

The property will typically describe an Actor surrendering custody of an object when it is handed over to someone else's care. On occasion, physical custody may be surrendered involuntarily – through accident, loss or theft.
In reality, custody is either transferred to someone or from someone, or both.

Examples:

- the Secure Deliveries Inc. crew (E40) *surrendered custody through* The delivery of the paintings by Secure Deliveries Inc. to the National Gallery (E10).

P29 custody received by (received custody through)

Domain: [E10](#) Transfer of Custody
Range: [E39](#) Actor
Subproperty of: [E7](#) Activity. [P14](#) carried out by (performed): [E39](#) Actor
Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E39 Actor or Actors who receive custody of an instance of E18 Physical Thing in an E10 Transfer of Custody activity.

The property will typically describe Actors receiving custody of an object when it is handed over from another Actor's care. On occasion, physical custody may be received involuntarily or illegally – through accident, unsolicited donation, or theft.

In reality, custody is either transferred to someone or from someone, or both.

Examples:

- representatives of The National Gallery (E40) *received custody through*. The delivery of the paintings by Secure Deliveries Inc. to the National Gallery (E10)

P30 transferred custody of (custody transferred through)

Domain: [E10](#) Transfer of Custody
Range: [E18](#) Physical Thing
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies an item or items of E18 Physical Thing concerned in an E10 Transfer of Custody activity.

The property will typically describe the object that is handed over by an E39 Actor to another Actor's custody. On occasion, physical custody may be transferred involuntarily or illegally – through accident, unsolicited donation, or theft.

Examples:

the delivery of the paintings by Secure Deliveries Inc. to the National Gallery (E10) transferred custody of paintings from The Iveagh Bequest (E19)

P31 has modified (was modified by)

Domain: [E11](#) Modification
Range: [E24](#) Physical Man-Made Thing
Subproperty of: [E5](#) Event. [P12](#) occurred in the presence of (was present at): [E77](#) Persistent Item
Superproperty of: [E12](#) Production. [P108](#) has produced (was produced by): [E24](#) Physical Man-Made Thing
[E79](#) Part Addition. [P110](#) augmented (was augmented by): [E24](#) Physical Man-Made Thing
[E80](#) Part Removal. [P112](#) diminished (was diminished by): [E24](#) Physical Man-Made Thing
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E24 Physical Man-Made Thing modified in an E11 Modification.

If a modification is applied to a non-man-made object, it is regarded as an E22 Man-Made Object from that time onwards.

Examples:

- rebuilding of the Reichstag (E11) *has modified* the Reichstag in Berlin (E24)

P32 used general technique (was technique of)

Domain: [E7](#) Activity
Range: [E55](#) Type
Subproperty of: [E7](#) Activity. [P125](#) used object of type (was type of object used in): [E55](#) Type
Superproperty of:
Quantification: many to many (0,n:0,n)

Scope note: This property identifies the technique that was employed in an act of modification.

These techniques should be drawn from an external E55 Type hierarchy of consistent terminology of general techniques such as embroidery, oil-painting, etc. Specific techniques may be further described as instances of E29 Design or Procedure.

Examples:

- ornamentation of silver cup 113 (E11) *used general technique* gold-plating (E55) (Design or Procedure Type)

P33 used specific technique (was used by)

Domain: [E7](#) Activity
Range: [E29](#) Design or Procedure
Subproperty of: [E5](#).Event. [P12](#) occurred in the presence of (was present at): [E77](#) Persistent Item
[E7](#) Activity. [P15](#) was influenced by (influenced): [E1](#) CRM Entity
[E7](#) Activity. [P16](#) used specific object (was used for): [E70](#) Thing
Quantification: many to many (0,n:0,n)

Scope note: This property identifies a specific E29 Design or Procedure used in an E11 Modification.

Modification may be carried out in order to ensure the preservation of an object and not just as part of the creative process.

The property differs from *P32 used general technique (was technique of)* in that the E29 Design or Procedure referred to is specific and documented rather than simply being a term in the E55 Type hierarchy. Typical examples would include intervention plans for conservation.

Examples:

- Ornamentation of silver cup 232 (E11) *used specific technique* 'Instructions for golden chase work by A N Other' (E29)
- Rebuilding of Reichstag (E11) *used specific technique* Architectural plans by Foster and Partners (E29)

P34 concerned (was assessed by)

Domain: [E14](#) Condition Assessment
Range: [E18](#) Physical Thing
Subproperty of: [E13](#) Attribute Assignment. [P140](#) assigned attribute to (was attributed by): [E1](#) CRM Entity
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E18 Physical Thing that was assessed during an E14 Condition Assessment activity.

Conditions may be assessed either by direct observation or using recorded evidence. In the latter case the E18 Physical Thing does not need to be present or extant.

Examples:

- 1997 condition assessment of the silver collection (E14) *concerned* silver cup 232 (E22)

P35 has identified (was identified by)

Domain: [E14](#) Condition Assessment
Range: [E3](#) Condition State

Subproperty of: [E13](#) Attribute Assignment. [P141](#) assigned (was assigned by): [E1](#) CRM Entity
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E3 Condition State that was observed in an E14 Condition Assessment activity.

Examples:

- 1997 condition assessment of silver cup 232 (E14) *has identified* oxidation traces were present in 1997 (E3) *has type* oxidation traces (E55)

P37 assigned (was assigned by)

Domain: [E15](#) Identifier Assignment
Range: [E42](#) Identifier
Subproperty of: [E13](#) Attribute Assignment. [P141](#) assigned (was assigned by): [E1](#) CRM Entity
Quantification: many to many (0,n:0,n)

Scope note: This property records the identifier that was assigned to an item in an Identifier Assignment activity.
The same identifier may be assigned on more than one occasion.
An Identifier might be created prior to an assignment.

Examples:

- 01 June 1997 Identifier Assignment of the silver cup donated by Martin Doerr (E15) *assigned* 232 (E42)

P38 deassigned (was deassigned by)

Domain: [E15](#) Identifier Assignment
Range: [E42](#) Identifier
Subproperty of: [E13](#) Attribute Assignment. [P141](#) assigned (was assigned by): [E1](#) CRM Entity
Quantification: many to many (0,n:0,n)

Scope note: This property records the identifier that was deassigned from an instance of E1 CRM Entity. Deassignment of an identifier may be necessary when an item is taken out of an inventory, a new numbering system is introduced or items are merged or split up.
The same identifier may be deassigned on more than one occasion.

Examples:

- 31 July 2001 Identifier Assignment of the silver cup OXCMS:2001.1.32 (E15) *deassigned* 232 (E42)

P39 measured (was measured by):

Domain: [E16](#) Measurement
Range: [E70](#) Thing
Subproperty of: [E13](#) Attribute Assignment. [P140](#) assigned attribute to (was attributed by): [E1](#) CRM Entity
Quantification: many to one, necessary (1,1:0,n)

Scope note: This property records the E70 Thing that was the subject of an instance of E16 Measurement Event. Thing may be measured more than once. Both material and immaterial sThing may be measured, e.g. the number of words in a text.

Examples:

- 31 August 1997 measurement of height of silver cup 232 (E16) *measured* silver cup 232 (E22)

P40 observed dimension (was observed in)

Domain: [E16](#) Measurement
Range: [E54](#) Dimension
Subproperty of: [E13](#) Attribute Assignment. [P141](#) assigned (was assigned by): [E1](#) CRM Entity
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property records the dimension that was observed in a E16 Measurement Event. E54 Dimension can be any quantifiable aspect of E70 Thing. Weight, image colour depth and monetary value are dimensions in this sense. One measurement activity may determine more than one dimension of one object. Dimensions may be determined either by direct observation or using recorded evidence. In the latter case the measured sThing does not need to be present or extant. Even though knowledge of the value of a dimension requires measurement, the dimension may be an object of discourse prior to, or even without, any measurement being made.

Examples:

- 31 August 1997 measurement of height of silver cup 232 (E16) *observed dimension* silver cup 232 height (E54) *has unit* mm (E58), *has value* 224 (E60)

P41 classified (was classified by)

Domain: [E17](#) Type Assignment
Range: [E1](#) CRM Entity
Subproperty of: [E13](#) Attribute Assignment. [P140](#) assigned attribute to (was attributed by): [E1](#) CRM Entity
Quantification: many to one, necessary (1,1:0,n)

Scope note: This property records the item to which a type was assigned in an E17 Type Assignment activity. Any instance of a CRM entity may be assigned a type through type assignment. Type assignment events allow a more detailed path from E1 CRM Entity through *P41 classified (was classified)*, E17 Type Assignment, *P42 assigned (was assigned by)* to E55 Type for assigning types to objects compared to the shortcut offered by *P2 has type (is type of)*.

Examples:

- 31 August 1997 classification of silver cup 232 (E17) *classified* silver cup 232 (E22)

P42 assigned (was assigned by)

Domain: [E17](#) Type Assignment
Range: [E55](#) Type
Subproperty of: [E13](#) Attribute Assignment. [P141](#) assigned (was assigned by): [E1](#) CRM Entity
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property records the type that was assigned to an entity by an E17 Type Assignment activity. Type assignment events allow a more detailed path from E1 CRM Entity through *P41 classified (was classified by)*, E17 Type Assignment, *P42 assigned (was assigned by)* to E55 Type for assigning types to objects compared to the shortcut offered by *P2 has type (is type of)*. For example, a fragment of an antique vessel could be assigned the type “attic red figured belly handled amphora” by expert A. The same fragment could be assigned the type “shoulder handled amphora” by expert B. A Type may be intellectually constructed independent from assigning an instance of it.

Examples:

- 31 August 1997 classification of silver cup 232 (E17) *assigned* goblet (E55)

P43 has dimension (is dimension of)

Domain: [E70](#) Thing
Range: [E54](#) Dimension
Quantification: one to many, dependent (0,n:1,1)

Scope note: This property records a E54 Dimension of some E70 Thing.
It is a shortcut of the more fully developed path from E70 Thing through *P39 measured (was measured by)*, E16 Measurement *P40 observed dimension (was observed in)* to E54 Dimension. It offers no information about how and when an E54 Dimension was established, nor by whom.

An instance of E54 Dimension is specific to an instance of E70 Thing.

Examples:

- silver cup 232 (E22) *has dimension* height of silver cup 232 (E54) *has unit* mm (E58), *has value* 224 (E60)

P44 has condition (condition of)

Domain: [E18](#) Physical Thing
Range: [E3](#) Condition State
Quantification: one to many, dependent (0,n:1,1)

Scope note: This property records an E3 Condition State for some E18 Physical Thing.

It is a shortcut of the more fully developed path from E18 Physical Thing through *P34 concerned (was assessed by)*, E14 Condition Assessment *P35 has identified (identified by)* to E3 Condition State. It offers no information about how and when the E3 Condition State was established, nor by whom.

An instance of Condition State is specific to an instance of Physical Thing.

Examples:

- silver cup 232 (E22) *has condition* oxidation traces were present in 1997 (E3) *has type* oxidation traces (E55)

P45 consists of (is incorporated in)

Domain: [E18](#) Physical Thing
Range: [E57](#) Material
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the instances of E57 Materials of which an instance of E18 Physical Thing is composed.

All physical things consist of physical materials. *P45 consists of (is incorporated in)* allows the different Materials to be recorded. *P45 consists of (is incorporated in)* refers here to observed Material as opposed to the consumed raw material.

A Material, such as a theoretical alloy, may not have any physical instances.

Examples:

- silver cup 232 (E22) *consists of* silver (E57)

P46 is composed of (forms part of)

Domain: [E18](#) Physical Thing

Range: [E18 Physical Thing](#)
Superproperty of: [E19 Physical Object](#). [P56](#) bears feature (is found on): [E26 Physical Feature](#)
Quantification: many to many (0,n:0,n)

Scope note: This property allows instances of E18 Physical Thing to be analysed into component elements.

Component elements, since they are themselves instances of E18 Physical Thing, may be further analysed into sub-components, thereby creating a hierarchy of part decomposition. An instance of E18 Physical Thing may be shared between multiple wholes, for example two buildings may share a common wall.

This property is intended to describe specific components that are individually documented, rather than general aspects. Overall descriptions of the structure of an instance of E18 Physical Thing are captured by the *P3 has note* property.

The instances of E57 Materials of which an item of E18 Physical Thing is composed should be documented using *P45 consists of (is incorporated in)*.

Examples:

- the Royal carriage (E22) *forms part of* the Royal train (E22)
- the “Hog’s Back” (E24) *forms part of* the “Fosseway” (E24)

P48 has preferred identifier (is preferred identifier of)

Domain: [E1 CRM Entity](#)
Range: [E42 Identifier](#)
Subproperty of: [E1 CRM Entity](#). [P1](#) is identified by (identifies): [E41 Appellation](#)
Quantification: many to one (0,1:0,n)

Scope note: This property records the preferred E42 Identifier that was used to identify an instance of E1 CRM Entity at the time this property was recorded.

More than one preferred identifier may have been assigned to an item over time. Use of this property requires an external mechanism for assigning temporal validity to the respective CRM instance.

P48 has preferred identifier (is preferred identifier of), is a shortcut for the path from E1 CRM Entity through *P140 assigned attribute to (was attributed by)*, E15 Identifier Assignment, *P37 assigned (was assigned by)* to E42 Identifier. The fact that an identifier is a preferred one for an organisation can be better expressed in a context independent form by assigning a suitable E55 Type to the respective instance of E15 Identifier Assignment using the *P2 has type* property.

Examples:

- the pair of Lederhosen donated by Dr Martin Doerr (E22) *has preferred identifier* OXCMS:2001.1.32 (E42)

P49 has former or current keeper (is former or current keeper of)

Domain: [E18 Physical Thing](#)
Range: [E39 Actor](#)
Superproperty of: [E18 Physical Thing](#). [P50](#) has current keeper (is current keeper of): [E39 Actor](#)
Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E39 Actor or Actors who have or have had custody of an instance of E18 Physical Thing at some time.

The distinction with *P50 has current keeper (is current keeper of)* is that *P49 has former or current keeper (is former or current keeper of)* leaves open the question as to whether the specified keepers are current.

P49 has former or current keeper (is former or current keeper of) is a shortcut for the more detailed path from E18 Physical Thing through *P30 transferred custody of (custody transferred through)*, E10 Transfer of Custody, *P28 custody surrendered by (surrendered custody through)* or *P29 custody received by (received custody through)* to E39 Actor.

Examples:

- paintings from The Iveagh Bequest (E18) *has former or current keeper* Secure Deliveries Inc. (E40)

P50 has current keeper (is current keeper of)

Domain: [E18](#) Physical Thing

Range: [E39](#) Actor

Subproperty of: [E18](#) Physical Thing. [P49](#) has former or current keeper (is former or current keeper of): [E39](#) Actor

Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E39 Actor or Actors who had custody of an instance of E18 Physical Thing at the time this property was recorded.

P50 has current keeper (is current keeper of) is a shortcut for the more detailed path from E18 Physical Thing through *P30 transferred custody of (custody transferred through)*, E10 Transfer of Custody, *P29 custody received by (received custody through)* to E39 Actor.

Examples:

- paintings from The Iveagh Bequest (E18) *has current keeper* The National Gallery (E40)

P51 has former or current owner (is former or current owner of)

Domain: [E18](#) Physical Thing

Range: [E39](#) Actor

Superproperty of: E18 Physical Thing. P52 has current owner (is current owner of): E39 Actor

Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E39 Actor that is or has been the legal owner (i.e. title holder) of an instance of E18 Physical Thing at some time.

The distinction with *P52 has current owner (is current owner of)* is that *P51 has former or current owner (is former or current owner of)* does not indicate whether the specified owners are current. *P51 has former or current owner (is former or current owner of)* is a shortcut for the more detailed path from E18 Physical Thing through *P24 transferred title of (changed ownership through)*, E8 Acquisition, *P23 transferred title from (surrendered title through)*, or *P22 transferred title to (acquired title through)* to E39 Actor.

Examples:

- paintings from the Iveagh Bequest (E18) *has former or current owner* Lord Iveagh (E21)

P52 has current owner (is current owner of)

Domain: [E18](#) Physical Thing

Range: [E39](#) Actor

Subproperty of: [E18](#) Physical Thing. [P51](#) has former or current owner (is former or current keeper of): [E39](#) Actor

Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E21 Person, E74 Group or E40 Legal Body that was the owner of an instance of E18 Physical Thing at the time this property was recorded.

P52 has current owner (is current owner of) is a shortcut for the more detailed path from E18 Physical Thing through *P24 transferred title of (changed ownership through)*, E8 Acquisition, *P22 transferred title to (acquired title through)* to E39 Actor, if and only if this acquisition event is the most recent.

Examples:

- paintings from the Iveagh Bequest (E18) *has current owner* «English Heritage» (E40)

P53 has former or current location (is former or current location of)

Domain: [E18](#) Physical Thing

Range: [E53](#) Place

Superproperty of: [E19](#) Physical Object. [P55](#) has current location (currently holds): [E53](#) Place

Quantification: many to many, necessary (1,n:0,n)

Scope note: This property allows an instance of E53 Place to be associated as the former or current location of an instance of E18 Physical Thing.

In the case of E19 Physical Objects, the property does not allow any indication of the Time-Span during which the Physical Object was located at this Place, nor if this is the current location.

In the case of immobile objects, the Place would normally correspond to the Place of creation. *P53 has former or current location (is former or current location of)* is a shortcut. A more detailed representation can make use of the fully developed (i.e. indirect) path from E19 Physical Object through *P25 moved (moved by)*, E9 Move, *P26 moved to (was destination of)* or *P27 moved from (was origin of)* to E53 Place.

Examples:

- silver cup 232 (E22) *has former or current location* Display Case 4, Room 23, Museum of Oxford (E53)

P54 has current permanent location (is current permanent location of)

Domain: [E19](#) Physical Object

Range: [E53](#) Place

Quantification: many to one (0,1:0,n)

Scope note: This property records the foreseen permanent location of an instance of E19 Physical Object at the time this property was recorded.

P54 has current permanent location (is current permanent location of) is similar to *P55 has current location (currently holds)*. However, it indicates the E53 Place currently reserved for an object, such as the permanent storage location or a permanent exhibit location. The object may be temporarily removed from the permanent location, for example when used in temporary exhibitions or loaned to another institution. The object may never actually be located at its permanent location.

Examples:

- silver cup 232 (E22) *has current permanent location* Shelf 3.1, Store 2, Museum of Oxford (E53)

P55 has current location (currently holds)

Domain: [E19](#) Physical Object

Range: [E53](#) Place

Subproperty of: [E18](#) Physical Thing. [P53](#) has former or current location (is former or current location of): [E53](#) Place

Quantification: many to one (0,1:0,n)

Scope note: This property records the location of an E19 Physical Object at the time the property was recorded.

This property is a specialisation of *P53 has former or current location (is former or current location of)*. It indicates that the E53 Place associated with the E19 Physical Object is the current location of the object. The property does not allow any indication of how long the Object has been at the current location.

P55 has current location (currently holds) is a shortcut. A more detailed representation can make use of the fully developed (i.e. indirect) path from E19 Physical Object through *P25 moved (moved by)*, E9 Move *P26 moved to (was destination of)* to E53 Place if and only if this Move is the most recent.

Examples:

- silver cup 232 (E22) *has current location* Display cabinet 23, Room 4, British Museum (E53)

P56 bears feature (is found on):

Domain: [E19](#) Physical Object

Range: [E26](#) Physical Feature

Subproperty of: [E18](#) Physical Thing. **P46 is composed of (forms part of):** [E18](#) Physical Thing

Quantification: one to many, dependent (0,n:1,1)

Scope note: This property describes a E26 Physical Feature found on a E19 Physical Object It does not specify the location of the feature on the object.

P56 bears feature (is found on) is a shortcut. A more detailed representation can make use of the fully developed (i.e. indirect) path from E19 Physical Object through *P59 has section (is located on or within)*, E53 Place, *P53 has former or current location (is former or current location of)* to E26 Physical Feature.

A Physical Feature can only exist on one object. One object may bear more than one Physical Feature. An E27 Site should be considered as an E26 Physical Feature on the surface of the Earth.

Examples:

- silver cup 232 (E22) *bears feature* 32 mm scratch on silver cup 232 (E26)

P57 has number of parts

Domain: [E19](#) Physical Object

Range: [E60](#) Number

Quantification: many to one (0,1:0,n)

Scope note: This property documents the E60 Number of parts of which an instance of E19 Physical Object is composed.

This may be used as a method of checking inventory counts with regard to aggregate or collective objects. What constitutes a part or component depends on the context and requirements of the documentation. Normally, the parts documented in this way would not be considered as worthy of individual attention.

For a more complete description, objects may be decomposed into their components and constituents using *P46 is composed of (forms parts of)* and *P45 consists of (is incorporated in)*. This allows each element to be described individually.

Examples:

- chess set 233 (E22) *has number of parts* 33 (E60)

P58 has section definition (defines section)

Domain: [E18](#) Physical Thing
Range: [E46](#) Section Definition
Quantification: one to many, dependent, (0,n:1,1)

Scope note: This property links an area (section) named by a E46 Section Definition to the instance of E18 Physical Thing upon which it is found.

The CRM handles sections as locations (instances of E53 Place) within or on E18 Physical Thing that are identified by E46 Section Definitions. Sections need not be discrete and separable components or parts of an object.

This is part of a more developed path from E18 Physical Thing through P58, E46 Section Definition, *P87 is identified by (identifies)* that allows a more precise definition of a location found on an object than the shortcut *P59 has section (is located on or within)*.

A particular instance of a Section Definition only applies to one instance of Physical Thing.

Examples:

- HMS Victory (E22) *has section definition* poop deck of HMS Victory (E46)

P59 has section (is located on or within)

Domain: [E18](#) Physical Thing
Range: [E53](#) Place
Quantification: one to many (0,n:0,1)

Scope note: This property links an area to the instance of E18 Physical Thing upon which it is found.

It is typically used when a named E46 Section Definition is not appropriate. E18 Physical Thing may be subdivided into arbitrary regions.

P59 has section (is located on or within) is a shortcut. If the E53 Place is identified by a Section Definition, a more detailed representation can make use of the fully developed (i.e. indirect) path from E18 Physical Thing through *P58 has section definition (defines section)*, E46 Section Definition, *P87 is identified by (identifies)* to E53 Place. A Place can only be located on or within one Physical Object.

Examples:

- HMS Victory (E22) *has section* HMS Victory section B347.6 (E53)

P62 depicts (is depicted by)

Domain: [E24](#) Physical Man-Made Thing
Range: [E1](#) CRM Entity
Quantification: many to many (0,n:0,n)

Scope note: This property identifies something that is depicted by an instance of E24 Physical Man-Made Thing.

This property is a shortcut of the more fully developed path from E24 Physical Man-Made Thing through P65 shows visual item (is shown by), E36 Visual Item, P138 represents (has representation) to E1CRM Entity. P62.1 mode of depiction allows the nature of the depiction to be refined.

Examples:

“Impression Sunrise” by Monet (E84) depicts sun rising over Le Havre (E5) mode of depiction Impressionistic (E55)

a 20 pence coin (E24) depicts Queen Elizabeth II (E21) mode of depiction Profile (E55)

Properties: **P62.1 mode of depiction:** [E55](#) Type

P65 shows visual item (is shown by)

Domain: [E24](#) Physical Man-Made Thing
Range: [E36](#) Visual Item
Subproperty of: [E24](#) Physical Man-Made Thing. [P128](#) carries (is carried by): [E73](#) Information Object
Quantification: many to many (0,n:0,n)

Scope note: This property documents an E36 Visual Item shown by an instance of E24 Physical Man-Made Thing.

This property is similar to *P62 depicts (is depicted by)* in that it associates an item of E24 Physical Man-Made Thing with a visual representation. However, *P65 shows visual item (is shown by)* differs from the *P62 depicts (is depicted by)* property in that it makes no claims about what the E36 Visual Item is deemed to represent. E36 Visual Item identifies a recognisable image or visual symbol, regardless of what this image may or may not represent.

For example, all recent British coins bear a portrait of Queen Elizabeth II, a fact that is correctly documented using *P62 depicts (is depicted by)*. Different portraits have been used at different periods, however. *P65 shows visual item (is shown by)* can be used to refer to a particular portrait.

P65 shows visual item (is shown by) may also be used for Visual Items such as signs, marks and symbols, for example the 'Maltese Cross' or the 'copyright symbol' that have no particular representational content.

This property is part of the fully developed path from E24 Physical Man-Made Thing through *P65 shows visual item (is shown by)*, E36 Visual Item, *P138 represents (has representation)* to E1 CRM Entity which is shortcut by, *P62 depicts (is depicted by)*.

Examples:

- “Impression Sunrise” by Monet (E84) *shows visual item* Impression_Sunrise.jpg (E38)

P67 refers to (is referred to by)

Domain: [E73](#) Information Object
Range: [E1](#) CRM Entity
Superproperty of: [E31](#) Document. [P70](#) documents (is documented in): [E1](#) CRM Entity
[E32](#) Authority Document. [P71](#) lists (is listed in): [E55](#) Type
[E73](#) Information Object. [P129](#) is about (is subject of): [E1](#) CRM Entity
[E36](#) Visual Item. [P138](#) represents (has representation): [E1](#) CRM Entity
Quantification: many to many (0,n:0,n)

Scope note: An E73 Information Object may refer to any other E1 CRM Entity.

This property documents that an E73 Information Object makes a statement about an instance of an E1 CRM Entity. P67refers to (is referred to by) has the P67.1 has type link to an instance of E55 Type. This is intended to allow a more detailed description of the type of reference. This differs from P129 is about (is subject of), which describes the primary subject or subjects of the E73 Information Object.

Examples:

the eBay auction listing for 4 July 2002 (E73) refers to silver cup 232 (E22) has type auction listing (E55)

Properties: P67.1 has type: [E55](#) Type

P68 usually employs (is usually employed by):

Domain: [E29](#) Design or Procedure

Range: [E57](#) Material

Quantification: many to many (0,n:0,n)

Scope note: This property describes an [E57](#) Material usually employed in an [E29](#) Design or Procedure.

Designs and procedures commonly employ particular Materials. The fabrication of adobe bricks, for example, requires straw, clay and water. This property enables this to be documented.

This property is not intended for the documentation of Materials that were required on a particular occasion when a Design or Procedure was executed.

Examples:

- procedure for soda glass manufacture ([E29](#)) *usually employs* soda ([E57](#))

P69 is associated with

Domain: [E29](#) Design or Procedure

Range: [E29](#) Design or Procedure

Quantification: many to many (0,n:0,n)

Scope note: This symmetric property describes the association of an [E29](#) Design or Procedure with other Designs or Procedures.

Any instance of [E29](#) Design or Procedure may be associated with other designs or procedures. The nature of the association may be whole-part, sequence, prerequisite etc. The property is assumed to be entirely reciprocal.

Examples:

- procedure for glass blowing ([E29](#)) *is associated with* procedure for glass heating ([E29](#))

Properties: P69.1 has type: [E55](#) Type

P70 documents (is documented in)

Domain: [E31](#) Document

Range: [E1](#) CRM Entity

Subproperty of: [E73](#) Information Object. [P67](#) refers to (is referred to by): [E1](#) CRM Entity

Quantification: many to many, necessary (1,n:0,n)

Scope note: This property describes the CRM Entities documented by instances of [E31](#) Document.

Documents may describe any conceivable entity, hence the link to the highest-level entity in the CRM hierarchy. This property is intended for cases where a reference is regarded as being of a documentary character, in the scholarly or scientific sense.

Examples:

- the British Museum catalogue ([E31](#)) *documents* the British Museum's Collection ([E78](#))

P71 lists (is listed in)

Domain: [E32](#) Authority Document

Range: [E55](#) Type

Subproperty of: [E73](#) Information Object. [P67](#) refers to (is referred to by): [E1](#) CRM Entity

Quantification: many to many (0,n:0,n)

Scope note: This property documents a source E32 Authority Document for an instance of an E55 Type.

Examples:

- the Art & Architecture Thesaurus (E32) *lists* alcazars (E55)

P72 has language (is language of)

Domain: [E33](#) Linguistic Object

Range: [E56](#) Language

Quantification: many to many, necessary (0,n:0,n)

Scope note: This property describes the E56 Language of an E33 Linguistic Object.

Linguistic Objects are composed in one or more human Languages. This property allows these languages to be documented.

Examples:

- the American Declaration of Independence (E33) *has language* 18th Century English (E56)

P73 has translation (is translation of)

Domain: [E33](#) Linguistic Object

Range: [E33](#) Linguistic Object

Subproperty of: [E70](#) Thing. [P130](#) shows features of (features are also found on): [E70](#) Thing

Quantification: one to many (0,n:0,1)

Scope note: This property describes the source and target of instances of E33Linguistic Object involved in a translation.

When a Linguistic Object is translated into a new language it becomes a new Linguistic Object, despite being conceptually similar to the source object.

Examples:

- “Les Baigneurs” (E33) *has translation* “The Bathers” (E33)

P74 has current or former residence (is current or former residence of)

Domain: [E39](#) Actor

Range: [E53](#) Place

Quantification: many to many (0,n:0,n)

Scope note: This property describes the current or former E53 Place of residence of an E39 Actor.

The residence may be either the Place where the Actor resides, or a legally registered address of any kind.

Examples:

- Queen Elizabeth II (E39) *has current or former residence* Buckingham Palace (E53)

P75 possesses (is possessed by)

Domain: [E39](#) Actor

Range: [E30](#) Right

Quantification: many to many (0,n:0,n)

Scope note: This property identifies former or current instances of E30 Rights held by an E39 Actor.

Examples:

- Michael Jackson (E21) *possesses* Intellectual property rights on the Beatles' back catalogue (E30)

P76 has contact point (provides access to)

Domain: [E39](#) Actor

Range: [E51](#) Contact Point

Quantification: many to many (0,n:0,n)

Scope note: This property identifies an E51 Contact Point of any type that provides access to an E39 Actor by any communication method, such as e-mail or fax.

Examples:

- RLG (E40) *has contact point* bl.ric@rlg.org (E51)

P78 is identified by (identifies)

Domain: [E52](#) Time-Span

Range: [E49](#) Time Appellation

Subproperty of: [E1](#) CRM Entity. [P1](#) is identified by (identifies): [E41](#) Appellation

Quantification: many to many (0,n:0,n)

Scope note: This property identifies an E52 Time-Span using an E49Time Appellation.

Examples:

- the time span 1926 to 1988 (E52) *is identified by* Showa (Japanese time appellation) (E49)

P79 beginning is qualified by

Domain: [E52](#) Time-Span

Range: [E62](#) String

Subproperty of: [E1](#) CRM Entity. [P3](#) has note: [E62](#) String

Quantification: many to one (0,1:0,n)

Scope note: This property qualifies the beginning of an E52 Time-Span in some way.

The nature of the qualification may be certainty, precision, source etc.

Examples:

- the time-span of the Holocene (E52) *beginning is qualified by* approximately (E62)

P80 end is qualified by

Domain: [E52](#) Time-Span

Range: [E62](#) String

Subproperty of: [E1](#) CRM Entity. [P3](#) has note: [E62](#) String

Quantification: many to one (0,1:0,n)

Scope note: This property qualifies the end of an E52 Time-Span in some way.

The nature of the qualification may be certainty, precision, source etc.

Examples:

- the time-span of the Holocene (E52) *end is qualified by* approximately (E62)

P81 ongoing throughout

Domain: [E52](#) Time-Span
Range: [E61](#) Time Primitive
Quantification: many to one, necessary (1,1:0,n)

Scope note: This property describes the minimum period of time covered by an E52 Time-Span.

Since Time-Spans may not have precisely known temporal extents, the CRM supports statements about the minimum and maximum temporal extents of Time-Spans. This property allows a Time-Span's minimum temporal extent (i.e. it's inner boundary) to be assigned an E61 Time Primitive value. Time Primitives are treated by the CRM as application or system specific date intervals, and are not further analysed.

Examples:

- the time-span of the development of the CIDOC CRM (E52) *ongoing throughout* 1996-2002 (E61)

P82 at some time within

Domain: [E52](#) Time-Span
Range: [E61](#) Time Primitive
Quantification: many to one, necessary (1,1:0,n)

Scope note: This property describes the maximum period of time within which an E52 Time-Span falls.

Since Time-Spans may not have precisely known temporal extents, the CRM supports statements about the minimum and maximum temporal extents of Time-Spans. This property allows a Time-Span's maximum temporal extent (i.e. it's outer boundary) to be assigned an E61 Time Primitive value. Time Primitives are treated by the CRM as application or system specific date intervals, and are not further analysed.

Examples:

- the time-span of the development of the CIDOC CRM (E52) *at some time within* 1992-infinity (E61)

P83 had at least duration (was minimum duration of)

Domain: [E52](#) Time-Span
Range: [E54](#) Dimension
Quantification: one to one (1,1:1,1)

Scope note: This property describes the minimum length of time covered by an E52 Time-Span.

It allows an E52 Time-Span to be associated with an E54 Dimension representing it's minimum duration (i.e. it's inner boundary) independent from the actual beginning and end.

Examples:

- the time span of the Battle of Issos 333 B.C.E. (E52) *had at least duration* Battle of Issos minimum duration (E54) *has unit* day (E58) *has value* 1 (E60)

P84 had at most duration (was maximum duration of)

Domain: [E52](#) Time-Span
Range: [E54](#) Dimension
Quantification: one to one (1,1:1,1)

Scope note: This property describes the maximum length of time covered by an E52 Time-Span.

It allows an E52 Time-Span to be associated with an E54 Dimension representing its maximum duration (i.e. its outer boundary) independent from the actual beginning and end.

Examples:

- the time span of the Battle of Issos 333 B.C.E. (E52) *had at most duration* Battle of Issos maximum duration (E54) *has unit* day (E58) *has value* 2 (E60)

P86 falls within (contains)

Domain: [E52](#) Time-Span

Range: [E52](#) Time-Span

Quantification: many to many (0,n:0,n)

Scope note: This property describes the inclusion relationship between two instances of E52 Time-Span.

This property supports the notion that a Time-Span's temporal extent falls within the temporal extent of another Time-Span. It addresses temporal containment only, and no contextual link between the two instances of Time-Span is implied.

Examples:

- the time-span of the Apollo 11 moon mission (E52) *falls within* the time-span of the reign of Queen Elizabeth II (E52)

P87 is identified by (identifies)

Domain: [E53](#) Place

Range: [E44](#) Place Appellation

Subproperty of: [E1](#) CRM Entity. [P1](#) is identified by (identifies): [E41](#) Appellation

Quantification: many to many (0,n:0,n)

Scope note: This property identifies an E53 Place using an E44 Place Appellation.

Examples of Place Appellations used to identify Places include instances of E48 Place Name, addresses, E47 Spatial Coordinates etc.

Examples:

- the location of the Duke of Wellington's House (E53) *is identified by* No 1 London (E45)

P88 consists of (forms part of)

Domain: [E53](#) Place

Range: [E53](#) Place

Quantification: many to many (0,n:0,n)

Scope note: This property identifies an E53 Place that forms part of another Place.

It supports the notion that a Place can be subdivided into one or more constituent parts. It implies both spatial and contextual containment relationships between the two Places.

Examples:

- the area covered by the London Borough of Islington in 1976 (E53) *forms part of* the area covered by Greater London in 1976 (E53)

P89 falls within (contains)

Domain: [E53](#) Place

Range: [E53](#) Place
 Quantification: many to many (0,n:0,n)

Scope note: This property identifies the instances of E53 Places that fall within the area covered by another Place.

It addresses spatial containment only, and no ‘whole-part’ relationship between the two places is implied.

Examples:

- the area covered by the World Heritage Site of Stonehenge (E53) *falls within* the area of Salisbury Plain (E53)

P90 has value

Domain: [E54](#) Dimension
 Range: [E60](#) Number
 Quantification: many to one, necessary (1,1:0,n)

Scope note: This property allows an E54 Dimension to be approximated by an E60 Number primitive.

Examples:

- height of silver cup 232 (E54) *has value* 226 (E60)

P91 has unit (is unit of)

Domain: [E54](#) Dimension
 Range: [E58](#) Measurement Unit
 Quantification: many to one, necessary (1,1:0,n)

Scope note: This property shows the type of unit an E54 Dimension was expressed in.

Examples:

- height of silver cup 232 (E54) *has unit* mm (E58)

P92 brought into existence (was brought into existence by)

Domain: [E63](#) Beginning of Existence
 Range: [E77](#) Persistent Item
 Subproperty of: [E5](#) Event. [P12](#) occurred in the presence of (was present at): [E77](#) Persistent Item
 Superproperty of: [E65](#) Creation. [P94](#) has created (was created by): [E28](#) Conceptual Object
[E66](#) Formation. [P95](#) has formed (was formed by): [E74](#) Group
[E67](#) Birth. [P98](#) brought into life (was born): [E21](#) Person
[E12](#) Production. [P108](#) has produced (was produced by): [E24](#) Physical Man-Made Thing
[E81](#) Transformation. [P123](#) resulted in (resulted from): [E77](#) Persistent Item

Quantification: one to many, necessary, dependent (1,n:1,1)

Scope note: This property allows an E63 Beginning of Existence event to be linked to the E77 Persistent Item brought into existence by it.

It allows a “start” to be attached to any Persistent Item being documented i.e. E70 Thing, E72 Legal Object, E39 Actor, E41 Appellation, E51 Contact Point and E55 Type.

Examples:

- the birth of Mozart (E67) *brought into existence* Mozart (E21)

P93 took out of existence (was taken out of existence by)

Domain: [E64](#) End of Existence

Range: [E77](#) Persistent Item

Subproperty of: [E5](#) Event. [P12](#) occurred in the presence of (was present at): [E77](#) Persistent Item

Superproperty of: [E6](#) Destruction. [P13](#) destroyed (was destroyed by): [E18](#) Physical Thing

[E68](#) Dissolution. [P99](#) dissolved (was dissolved by): [E74](#) Group

[E69](#) Death. [P100](#) was death of (died in): [E21](#) Person

[E81](#) Transformation. [P124](#) transformed (was transformed by): [E77](#) Persistent Item

Quantification: one to many, necessary (1,n:0,1)

Scope note: This property allows an E64 End of Existence event to be linked to the E77 Persistent Item taken out of existence by it.

In the case of immaterial things, the E64 End of Existence is considered to take place with the destruction of the last physical carrier.

This allows an “end” to be attached to any Persistent Item being documented i.e. E70 Thing, E72 Legal Object, E39 Actor, E41 Appellation, E51 Contact Point and E55 Type. For many Persistent Items we know the maximum life-span and can infer, that they must have ended to exist. We assume in that case an End of Existence, which may be as unnoticeable as forgetting the secret knowledge by the last representative of some indigenous nation.

Examples:

- the death of Mozart (E69) *took out of existence* Mozart (E21)

P94 has created (was created by)

Domain: [E65](#) Creation

Range: [E28](#) Conceptual Object

Subproperty of: [E63](#) Beginning of Existence. [P92](#) brought into existence (was brought into existence by): [E77](#) Persistent Item

Superproperty of: [E83](#) Type Creation. [P135](#) created type (was created by): [E55](#) Type

Quantification: one to many, necessary, dependent (1,n:1,1)

Scope note: This property allows a conceptual E65 Creation to be linked to the E28 Conceptual Object created by it.

It represents the act of conceiving the intellectual content of the E28 Conceptual Object. It does not represent the act of creating the first physical carrier of the E28 Conceptual Object. As an example, this is the composition of a poem, not its commitment to paper.

Examples:

- the composition of “The Four Friends” by A. A. Milne (E65) *has created* “The Four Friends” by A. A. Milne (E28)

P95 has formed (was formed by)

Domain: [E66](#) Formation

Range: [E74](#) Group

Subproperty of: [E63](#) Beginning of Existence. [P92](#) brought into existence (was brought into existence by): [E77](#) Persistent Item

Quantification: one to many, necessary, dependent (1,n:1,1)

Scope note: This property links the founding or E66 Formation for an E74 Group with the Group itself.

Examples:

- the formation of the CIDOC CRM SIG at the August 2000 CIDOC Board meeting (E66) *has formed* the CIDOC CRM Special Interest Group (E74)

P96 by mother (gave birth)

Domain: [E67](#) Birth
Range: [E21](#) Person
Subproperty of: [E5](#) Event. [P11](#) had participant (participated in): [E39](#) Actor
Quantification: many to one, necessary (1,1:0,1)

Scope note: This property links an E67 Birth event to an E21 Person as a participant in the role of birth-giving mother.

Note that biological fathers are not necessarily participants in the Birth (see *P97 from father (was father for)*). The Person being born is linked to the Birth with the property *P98 brought into life (was born)*. This is not intended for use with general natural history material, only people. There is no explicit method for modelling conception and gestation except by using extensions. This is a sub-property of *P11 had participant (participated in)*.

Examples:

- the birth of Queen Elizabeth II (E67) *by mother* Queen Mother (E21)

P97 from father (was father for)

Domain: [E67](#) Birth
Range: [E21](#) Person
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property links an E67 Birth event to an E21 Person in the role of biological father.

Note that biological fathers are not seen as necessary participants in the Birth, whereas birth-giving mothers are (see *P96 by mother (gave birth)*). The Person being born is linked to the Birth with the property *P98 brought into life (was born)*.

This is not intended for use with general natural history material, only people. There is no explicit method for modelling conception and gestation except by using extensions. A Birth event is normally (but not always) associated with one biological father.

Examples:

- King George VI (E21) *was father for* the birth of Queen Elizabeth II (E67)

P98 brought into life (was born)

Domain: [E67](#) Birth
Range: [E21](#) Person
Subproperty of: [E63](#) Beginning of Existence. [P92](#) brought into existence (was brought into existence by): [E77](#) Persistent Item
Quantification: one to many, dependent (0,n:1,1)

Scope note: This property links an E67Birth event to an E21 Person in the role of offspring.

Twins, triplets etc. are brought into life by the same Birth event. This is not intended for use with general Natural History material, only people. There is no explicit method for modelling conception and gestation except by using extensions.

Examples:

- the Birth of Queen Elizabeth II (E67) *brought into life* Queen Elizabeth II (E21)

P99 dissolved (was dissolved by)

Domain: [E68](#) Dissolution
Range: [E74](#) Group
Subproperty of: [E5](#) Event. [P11](#) had participant (participated in): [E39](#) Actor
[E64](#) End of Existence. [P93](#) took out of existence (was taken out of existence by): [E77](#)
Persistent Item
Quantification: one to many, necessary (1,n:0,n)
Scope note: This property links the disbanding or E68 Dissolution of an E74 Group to the Group itself.
Examples:

- the end of The Hole in the Wall Gang (E68) *dissolved* The Hole in the Wall Gang (E74)

P100 was death of (died in)

Domain: [E69](#) Death
Range: [E21](#) Person
Subproperty of: [E64](#) End of Existence. [P93](#) took out of existence (was taken out of existence by): [E77](#)
Persistent Item
Quantification: one to many, necessary (1,n:0,n)
Scope note: This property links an E69 Death event to the E21 Person that died.

A Death event may involve multiple people, for example in the case of a battle or disaster. This is not intended for use with general Natural History material, only people.
Examples:

- Mozart's death (E69) *was death of* Mozart (E21)

P101 had as general use (was use of)

Domain: [E70](#) Thing
Range: [E55](#) Type
Quantification: many to many (0,n:0,n)
Scope note: This property links an instance of E70 Thing to an E55 Type of usage.

It allows the generic link between things, both physical and immaterial, to methods and techniques of use. Thus it can be asserted that a baseball bat had a general use for sport and a specific use for threatening people during the Great Train Robbery.
Examples:

- Tony Gill's Ford Mustang (E22) *had as general use* transportation (E55)

P102 has title (is title of)

Domain: [E71](#) Man-Made Thing
Range: [E35](#) Title
Subproperty of: [E1](#) CRM Entity. [P1](#) is identified by (identifies): [E41](#) Appellation
Quantification: many to many (0,n:0,n)
Scope note: This property describes the E35 Title applied to an instance of E71 Man-Made Thing. The E55 Type of Title is assigned in a sub property.

The *P102.1 has type* property of the *P102 has title (is title of)* property enables the relationship between the Title and the thing to be further clarified, for example, if the Title was a given Title, a supplied Title etc.
It allows any man-made material or immaterial thing to be given a Title. It is possible to imagine a Title being created without a specific object in mind.

Examples:

- the first book of the Old Testament (E33) *has title* “Genesis” (E35)
has type translated (E55)

Properties: P102.1 has type: [E55](#) Type

P103 was intended for (was intention of)

Domain: [E71](#) Man-Made Thing

Range: [E55](#) Type

Quantification: many to many (0,n:0,n)

Scope note: This property links an instance of E71 Man-Made Thing to an E55 Type of usage.

It creates a property between specific man-made things, both physical and immaterial, to Types of intended methods and techniques of use. Note: A link between specific man-made things and a specific use activity should be expressed using *P19 was intended use of (was made for)*.

Examples:

- this plate (E22) *was intended for* being destroyed at wedding reception (E55)

P104 is subject to (applies to)

Domain: [E72](#) Legal Object

Range: [E30](#) Right

Quantification: many to many (0,n:0,n)

Scope note: This property links a particular E72 Legal Object to the instances of E30 Right to which it is subject.

The Right is held by an E39 Actor as described by *P75 possesses (is possessed by)*.

Examples:

- Beatles back catalogue (E72) *is subject to* reproduction right on Beatles back catalogue (E30)

P105 right held by (has right on)

Domain: [E72](#) Legal Object

Range: [E39](#) Actor

Quantification: many to many (0,n:0,n)

Scope note: This property identifies the E39 Actor who holds the instances of E30 Right to an E72 Legal Object.

P105 right held by (has right on) is a shortcut of the fully developed path from E72 Legal Object through *P104 is subject to (applies to)*, E30 Right, *P75 possesses (is possessed by)* to E39 Actor.

Examples:

- Beatles back catalogue (E72) *right held by* Michael Jackson (E21)

P106 is composed of (forms part of)

Domain: [E73](#) Information Object

Range: [E73](#) Information Object
Quantification: many to many (0,n:0,n)

Scope note: This property links an [E73](#) Information Object to another [E73](#) Information Object in a part/whole relationship.

It allows for the decomposition of an Information Object into component parts, and hence the creation of a nested hierarchy of Information Objects

Examples:

- “the love song of J. Alfred Prufrock” ([E33](#)) *forms part of* The Works of T.S. Eliot. ([E33](#))

P107 has current or former member (is current or former member of)

Domain: [E74](#) Group
Range: [E39](#) Actor
Quantification: many to many (0,n:0,n)

Scope note: This property relates an [E39](#) Actor to the [E74](#) Group of which he or she is a member.

Groups, Legal Bodies and Persons, may all be members of Groups. A Group necessarily consists of more than one Person.

Examples:

- Moholy Nagy ([E21](#)) *is current or former member of* Bauhaus ([E74](#))
- National Museum of Science and Industry ([E40](#)) *has current or former member* The National Railway Museum ([E40](#))

P108 has produced (was produced by)

Domain: [E12](#) Production
Range: [E24](#) Physical Man-Made Thing
Subproperty of: [E11](#) Modification. [P31](#) has modified (was modified by): [E24](#) Physical Man-Made Thing
[E63](#) Beginning of Existence. [P92](#) brought into existence (was brought into existence by): [E77](#) Persistent Item
Quantification: one to many, necessary, dependent (1,n:1,1)

Scope note: This property identifies the [E24](#) Physical Man-Made Thing that came into existence as a result of an [E12](#) Production.

The identity of an instance of [E24](#) Physical Man-Made Thing is not defined by its matter, but by its existence as a subject of documentation. An [E12](#) Production can result in the creation of multiple instances of [E24](#) Physical Man-Made Thing.

Examples:

- The building of Rome ([E12](#)) *has produced* The Colosseum ([E22](#))

P109 has current or former curator (is current or former curator of)

Domain: [E78](#) Collection
Range: [E39](#) Actor
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the [E39](#) Actor or Actors who assume or have assumed overall curatorial responsibility for an [E78](#) Collection.

This property is effectively a short-cut. It does not allow a history of curation to be recorded. This would require use of an Event assigning responsibility for a Collection to a curator.

Examples:

- the Robert Opie Collection (E78) *has current or former curator* Robert Opie (E39)

P110 augmented (was augmented by)

Domain: [E79](#) Part Addition
Range: [E24](#) Physical Man-Made Thing
Subproperty of: [E11](#) Modification. [P31](#) has modified (was modified by): [E24](#) Physical Man-Made Thing
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E24 Physical Man-Made Thing that is added to (augmented) in an E79 Part Addition.

Although a Part Addition event normally concerns only one item of Physical Man-Made Thing, it is possible to imagine circumstances under which more than one item might be added to (augmented). For example, the artist Jackson Pollock trailing paint onto multiple canvasses.

Examples:

- the final nail-insertion Event (E79) *augmented* Coffin of George VI (E24)

P111 added (was added by)

Domain: [E79](#) Part Addition
Range: [E18](#) Physical Thing
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E18 Physical Thing that is added during an E79 Part Addition activity

Examples:

- the insertion of the final nail (E79) *added* the last nail in George VI's coffin (E18)

P112 diminished (was diminished by)

Domain: [E80](#) Part Removal
Range: [E24](#) Physical Man-Made Thing
Subproperty of: [E11](#) Modification. [P31](#) has modified (was modified by): [E24](#) Physical Man-Made Thing
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E24 Physical Man-Made Thing that was diminished by E80 Part Removal.

Although a Part removal activity normally concerns only one item of Physical Man-Made Thing, it is possible to imagine circumstances under which more than one item might be diminished by a single Part Removal activity.

Examples:

- the coffin of Tut Ankh Amun (E22) *was diminished by* The opening of the coffin of Tut Ankh Amun (E80)

P113 removed (was removed by)

Domain: [E80](#) Part Removal
Range: [E18](#) Physical Thing
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E18 Physical Thing that is removed during an E80 Part Removal

activity.

Examples:

- the opening of the coffin of Tut Ankh Amun (E80) *removed* The mummy of Tut Ankh Amun (E20,E22)

P114 is equal in time to

Domain: [E2](#) Temporal Entity

Range: [E2](#) Temporal Entity

Quantification: many to many (0,n:0,n)

Scope note: This symmetric property allows the instances of E2 Temporal Entity with the same E52 Time-Span to be equated.
This property is only necessary if the time span is unknown (otherwise the equivalence can be calculated).

This property is the same as the "equal" relationship of Allen's temporal logic (Allen, 1983, pp. 832-843).

Examples:

- the destruction of the Villa Justinian Tempus (E6) *is equal in time to* the death of Maximus Venderus (E69)

P115 finishes (is finished by)

Domain: [E2](#) Temporal Entity

Range: [E2](#) Temporal Entity

Quantification: many to many (0,n:0,n)

Scope note: This property allows the ending point for a E2 Temporal Entity to be situated by reference to the ending point of another temporal entity of longer duration.

This property is only necessary if the time span is unknown (otherwise the relationship can be calculated). This property is the same as the "finishes / finished-by" relationships of Allen's temporal logic (Allen, 1983, pp. 832-843).

Examples:

- Late Bronze Age (E4) *finishes* Bronze Age (E4)

P116 starts (is started by)

Domain: [E2](#) Temporal Entity

Range: [E2](#) Temporal Entity

Quantification: many to many (0,n:0,n)

Scope note: This property allows the starting point for a E2 Temporal Entity to be situated by reference to the starting point of another temporal entity of longer duration.

This property is only necessary if the time span is unknown (otherwise the relationship can be calculated). This property is the same as the "starts / started-by" relationships of Allen's temporal logic (Allen, 1983, pp. 832-843).

Examples:

- Early Bronze Age (E4) *starts* Bronze Age (E4)

P117 occurs during (includes)

Domain: [E2](#) Temporal Entity
Range: [E2](#) Temporal Entity
Quantification: many to many (0,n:0,n)

Scope note: This property allows the entire E52 Time-Span of an E2 Temporal Entity to be situated within the Time-Span of another temporal entity that starts before and ends after the included temporal entity.

This property is only necessary if the time span is unknown (otherwise the relationship can be calculated). This property is the same as the "during / includes" relationships of Allen's temporal logic (Allen, 1983, pp. 832-843).

Examples:

- Middle Saxon period (E4) *occurs during* Saxon period (E4)

P118 overlaps in time with (is overlapped in time by)

Domain: [E2](#) Temporal Entity
Range: [E2](#) Temporal Entity
Quantification: many to many (0,n:0,n)

Scope note: This property identifies an overlap between the instances of E52 Time-Span of two instances of E2 Temporal Entity.

It implies a temporal order between the two entities: if A overlaps in time B, then A must start before B, and B must end after A. This property is only necessary if the relevant time spans are unknown (otherwise the relationship can be calculated).

This property is the same as the "overlaps / overlapped-by" relationships of Allen's temporal logic (Allen, 1983, pp. 832-843).

Examples:

- the Iron Age (E52) *overlaps in time with* the Roman period (E52)

P119 meets in time with (is met in time by)

Domain: [E2](#) Temporal Entity
Range: [E2](#) Temporal Entity
Quantification: many to many (0,n:0,n)

Scope note: This property indicates that one E2 Temporal Entity immediately follows another.

It implies a particular order between the two entities: if A meets in time with B, then A must precede B. This property is only necessary if the relevant time spans are unknown (otherwise the relationship can be calculated).

This property is the same as the "meets / met-by" relationships of Allen's temporal logic (Allen, 1983, pp. 832-843).

Examples:

- Early Saxon Period (E52) *meets in time with* Middle Saxon Period (E52)

P120 occurs before (occurs after)

Domain: [E2](#) Temporal Entity
Range: [E2](#) Temporal Entity

Quantification: many to many (0,n:0,n)

Scope note: This property identifies the relative chronological sequence of two temporal entities.

It implies that a temporal gap exists between the end of A and the start of B. This property is only necessary if the relevant time spans are unknown (otherwise the relationship can be calculated).

This property is the same as the "before / after " relationships of Allen's temporal logic (Allen, 1983, pp. 832-843).

Examples:

- Early Bronze Age (E52) *occurs before* Late Bronze age (E52)

P121 overlaps with

Domain: [E53](#) Place

Range: [E53](#) Place

Quantification: many to many (0,n:0,n)

Scope note: This symmetric property allows the instances of E53 Place with overlapping geometric extents to be associated with each other.

It does not specify anything about the shared area. This property is purely spatial, in contrast to Allen operators, which are purely temporal.

Examples:

- the territory of the United States (E53) *overlaps with* the Arctic (E53)

P122 borders with

Domain: [E53](#) Place

Range: [E53](#) Place

Quantification: many to many (0,n:0,n)

Scope note: This symmetric property allows the instances of E53 Place which share common borders to be related as such.

This property is purely spatial, in contrast to Allen operators, which are purely temporal.

Examples:

- Scotland (E53) *borders with* England (E53)

P123 resulted in (resulted from)

Domain: [E81](#) Transformation

Range: [E77](#) Persistent Item

Subproperty of: [E63](#) Beginning of Existence. [P92](#) brought into existence (was brought into existence by): [E77](#) Persistent Item

Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the E77 Persistent Item or items that are the result of an E81 Transformation.

New items replace the transformed item or items, which cease to exist as units of documentation. The physical continuity between the old and the new is expressed by the link to the common Transformation.

Examples:

- the transformation of the Venetian Loggia in Heraklion into a city hall (E81) *resulted in* the City Hall of Heraklion (E22)
- the death and mummification of Tut Ankh Amun (E81) resulted in the Mummy of Tut Ankh Amun (E22 and E20)

P124 transformed (was transformed by)

Domain: [E81](#) Transformation

Range: [E77](#) Persistent Item

Subproperty of: [E64](#) End of Existence. [P93](#) took out of existence (was taken out of existence by): [E77](#) Persistent Item

Quantification: one to many, necessary (1,n:0,1)

Scope note: This property identifies the E77 Persistent Item or items that cease to exist due to a E81 Transformation.

It is replaced by the result of the Transformation, which becomes a new unit of documentation. The continuity between both items, the new and the old, is expressed by the link to the common Transformation.

Examples:

- the transformation of the Venetian Loggia in Heraklion into a city hall (E81) *transformed* the Venetian Loggia in Heraklion (E22)
- the death and mummification of Tut Ankh Amun (E81) *transformed* the ruling Pharaoh Tut Ankh Amun (E21)

P125 used object of type (was type of object used in)

Domain: [E7](#) Activity

Range: [E55](#) Type

Subproperty of:

Superproperty of: [E7](#) Activity. [P32](#) used general technique (was technique of): [E55](#) Type

Quantification: many to many (0,n:0,n)

Scope note: This property defines the kind of objects used in an E7 Activity, when the specific instance is either unknown or not of interest, such as use of "a hammer".

Examples:

- at the Battle of Agincourt (E7), the English archers *used object of type* long bow (E55)

P126 employed (was employed in)

Domain: [E11](#) Modification

Range: [E57](#) Material

Quantification: many to many (0,n:0,n)

Scope note: This property identifies E57 Material employed in an E11 Modification.

The E57 Material used during the E11 Modification does not necessarily become incorporated into the E24 Physical Man-Made Thing that forms the subject of the E11 Modification.

Examples:

- the repairing of the Queen Mary (E11) *employed* Steel (E57)

- distilled water (E57) *was employed in* the restoration of the Sistine Chapel (E11)

P127 has broader term (has narrower term)

Domain: [E55](#) Type

Range: [E55](#) Type

Quantification: many to many (0,n:0,n)

Scope note: This property identifies a super-Type to which an E55 Type is related.

It allows Types to be organised into hierarchies. This is the sense of "broader term generic (BTG)" as defined in ISO 2788

Examples:

- dime (E55) *has broader term* coin (E55)

P128 carries (is carried by)

Domain: [E24](#) Physical Man-Made Thing

Range: [E73](#) Information Object

Quantification: many to many (0,n:0,n)

Superproperty of: [E24](#) Physical Man-Made Thing. [P65](#) shows visual item (is shown by): [E36](#) Visual Item

Scope note: This property identifies an E73 Information Object carried by an instance of E24 Physical Man-Made Thing.

In general this would be an E84 Information Carrier *P65 shows visual item (is shown by)* is a specialisation of *P128 carries (is carried by)* which should be used for carrying visual items.

Examples:

- Matthew's paperback copy of Reach for the Sky (E84) carries the text of Reach for the Sky (E73)

P129 is about (is subject of)

Domain: [E73](#) Information Object

Range: [E1](#) CRM Entity

Subproperty: [E73](#) Information Object. [P67](#) refers to (is referred to by): [E1](#) CRM Entity

Quantification: many to many (0,n:0,n)

Scope note: This property identifies a E1 CRM Entity that is the subject of an E73 Information Object, in the sense of "aboutness" used in library science.

This differs from *P67 refers to (is referred to by)*, which refers to an E1 CRM Entity, in that it describes the primary subject or subjects of the E73 Information Object.

Examples:

- reach for the Sky (E73) *is about* Douglas Bader (E39)

P130 shows features of (features are also found on)

Domain: [E70](#) Thing

Range: [E70](#) Thing

Superproperty: [E33](#) Linguistic Object. [P73](#) has translation (is translation of): [E33](#) Linguistic Object

Quantification: many to many (0,n:0,n)

Scope note: This property generalises the notions of "copy of" and "similar to" into a dynamic, asymmetric relationship, where the domain expresses the derivative, if such a direction can be established. Otherwise, the relationship is symmetric. It is a short-cut of *P15 was influenced by*

(*influenced*) in a creation or production, if such a reason for the similarity can be verified. Moreover it expresses similarity in cases that can be stated between two objects only, without historical knowledge about its reasons.

Examples:

- the Parthenon Frieze on the Acropolis in Athens (E22) *shows features of* the Original Parthenon Frieze in the British museum (E22). *Kind of similarity:* Copy (E55)

Properties: P130.1 kind of similarity: [E55](#) Type

P131 is identified by (identifies)

Domain: [E39](#) Actor
Range: [E82](#) Actor Appellation
Subproperty: [E1](#) CRM Entity. [P1](#) is identified by (identifies): [E41](#) Appellation
Quantification: many to many (0,n:0,n)

Scope note: This property identifies a name used specifically to identify an E39 Actor.

This property is a specialisation of *P1 is identified by (identifies)* is identified by.

Examples:

- Tyler Withersopp IV (E39) *is identified by* US social security number 619-17-4204 (E82)

P132 overlaps with

Domain: [E4](#) Period
Range: [E4](#) Period
Quantification: many to many (0,n:0,n)

Scope note: This symmetric property allows instances of E4 Period that overlap both temporally and spatially to be related, i.e. they share some spatio-temporal extent.

This property does not imply any ordering or sequence between the two periods, either spatial or temporal.

Examples:

- the “Urnfield” period (E4) *overlaps with* the “Hallstatt” period (E4)

P133 is separated from

Domain: [E4](#) Period
Range: [E4](#) Period
Quantification: many to many (0,n:0,n)

Scope note: This symmetric property allows instances of E4 Period that do not overlap both temporally and spatially, to be related i.e. they do not share any spatio-temporal extent.

This property does not imply any ordering or sequence between the two periods either spatial or temporal.

Examples:

- the “Hallstatt” period (E4) *is separated from* the “La Tène” era (E4)

P134 continued (was continued by)

Domain: [E7](#) Activity
Range: [E7](#) Activity

Subproperty: [E7](#) Activity. [P15](#) was influenced by (influenced): [E1](#) CRM Entity
Quantification: many to many (0,n:0,n)

Scope note: This property allows two activities to be related where the domain is considered as an intentional continuation of the range.

Used multiple times, this allows a chain of related activities to be created which follow each other in sequence.

Examples:

- the construction of the Kölner Dom (Cologne Cathedral) (E7), abandoned in the 15th century, *was continued by* construction in the 19th century adapting the initial plans so as to preserve the intended appearance (E7)

P135 created type (was created by)

Domain: [E83](#) Type Creation
Range: [E55](#) Type
Subproperty: [E65](#) Creation. [P94](#) has created (was created by): [E28](#) Conceptual Object
Quantification: one to many, necessary (1,n:0,1)

Scope note: This property identifies the E55 Type, which is created in an E83Type Creation activity.

Examples:

- The description of a new ribbon worm species by Bürger (E83) *created type* ‘*Lineus coxinus* (Bürger, 1892)’ (E55)

P136 was based on (supported type creation)

Domain: [E83](#) Type Creation
Range: [E1](#) CRM Entity
Subproperty: [E7](#) Activity. [P15](#) was influenced by (influenced): [E1](#) CRM Entity
Quantification: many to many (0,n:0,n)

Scope note: This property identifies one or more items that were used as evidence to declare a new E55 Type.

The examination of these items is often the only objective way to understand the precise characteristics of a new Type. Such items should be deposited in a museum or similar institution for that reason. The taxonomic role renders the specific relationship of each item to the Type, such as "holotype" or "original element".

Examples:

- the taxon creation of the plant species ‘*Serratula glauca* Linné, 1753.’ (E83) *was based on* Object BM000576251 of the Clayton Herbarium (E20) *in the taxonomic role* original element (E55)

Properties: **P136.1 in the taxonomic role: E55 Type**

P137 is exemplified by (exemplifies)

Domain: [E55](#) Type
Range: [E1](#) CRM Entity
Quantification: many to many (0,n:0,n)

Scope note: This property allows an item to be declared as an example of an E55 Type or taxon.

The taxonomic role renders the specific relationship of this example to the Type, such as

"prototypical", "archetypical" "lectotype", etc. The taxonomic role "lectotype" is not associated with the Type Creation (E83) itself, but selected in a later phase.

Examples:

- ‘*Spigelia marilandica* (L.) L.’ (E55) is exemplified by Object BM000098044 of the Clayton Herbarium (E20) in the taxonomic role lectotype

Properties: P137.1 in the taxonomic role: [E55](#) Type

P138 represents (has representation)

Domain: [E36](#) Visual Item
Range: [E1](#) CRM Entity
Subproperty: [E73](#) Information Object. [P67](#) refers to (is referred to by): [E1](#) CRM Entity
Quantification: many to many (0,n:0,n)

Scope note: This property establishes the relationship between an E36 Visual Item and the entity that it visually represents.

Any entity may be represented visually. This property is part of the fully developed path from E24 Physical Man-Made Thing through P65 shows visual item (is shown by), E36 Visual Item, P138 represents (has representation) to E1 CRM Entity, which is shortcut by P62depicts (is depicted by). P138.1 mode of representation allows the nature of the representation to be refined.

Examples:

the design on the reverse of a Swiss coin (E36) represents Helvetia (E28)
mode of representation Profile (E55)

Properties: P138.1 mode of representation: [E55](#) Type

P139 has alternative form

Domain: [E41](#) Appellation
Range: [E41](#) Appellation
Quantification: many to many (0,n:0,n)

Scope note: This property establishes a relationship of synonymy between two instances of E41 Appellation, independent from any item identified by them. The property is a dynamic, asymmetric relationship, where the domain expresses a derivative, if such a direction can be established. Otherwise, the relationship is symmetric.

The synonymy applies to all cases of use of an instance of E41 Appellation. Multiple names assigned to an object, which, are not always synonymous should be instantiated as repeated values of the “is identified by” property. This property is not transitive.

P139.1 has type allows the type of derivation, such as “transliteration from Latin 1 to ASCII” be refined.

This property establishes a relationship of equivalence between two instances of E41 Appellation independent from any item identified by them. It is a dynamic asymmetric relationship, where the range expresses the derivative, if such a direction can be established. Otherwise, the relationship is symmetric (11/07/2007).

The equivalence applies to all cases of use of an instance of E41 Appellation. Multiple names assigned to an object, which are not equivalent for all things identified with a specific instance of E41 Appellation, should be modelled as repeated values of the “is identified by” property. This property is symmetric but (11/07/2007) not transitive.

Examples:

- Museum Documentation Association (E41) *has alternative form* mda (E41)
- Martin Doerr (E41) *has alternative form* Martin Dörr(E41)

Properties: P139.1 has type: [E55](#) Type

P140 assigned attribute to (was attributed by)

Domain: [E13](#) Attribute Assignment

Range: [E1](#) CRM Entity

Quantification: many to many (0,n:0,n)

Superproperty of: [E14](#) Condition Assessment. [P34](#) concerned (was assessed by): [E18](#) Physical Thing
[E16](#) Measurement. [P39](#) measured (was measured by): [E70](#) Thing
[E17](#) Type Assignment. [P41](#) classified (was classified by): [E1](#) CRM Entity

Scope note: This property indicates the item to which an attribute or relation is assigned.

Examples:

- February 1997 Current Ownership Assessment of Martin Doerr's silver cup (E13) *assigned attribute to* Martin Doerr's silver cup (E19)
- 01 June 1997 Identifier Assignment of the silver cup donated by Martin Doerr (E15) *assigned attribute to* silver cup 232 (E19)

P141 assigned (was assigned by)

Domain: [E13](#) Attribute Assignment

Range: [E1](#) CRM Entity

Quantification: many to many (0,n:0,n)

Superproperty of: [E14](#) Condition Assessment. [P35](#) has identified (identified by): [E3](#) Condition State
[E15](#) Identifier Assignment. [P37](#) assigned (was assigned by): [E42](#) Identifier
[E15](#) Identifier Assignment. [P38](#) deassigned (was deassigned by): [E42](#) Identifier
[E16](#) Measurement. [P40](#) observed dimension (was observed in): [E54](#) Dimension
[E17](#) Type Assignment. [P42](#) assigned (was assigned by): [E55](#) Type

Scope note: This property indicates the attribute that was assigned or the item that was related to the item denoted by a property P140 assigned attribute to in an Attribute assignment action.

Examples:

- February 1997 Current Ownership Assessment of Martin Doerr's silver cup (E13) *assigned* Martin Doerr (E21)
- 01 June 1997 Identifier Assignment of the silver cup donated by Martin Doerr (E15) *assigned* object identifier 232

P142 used constituent (was used in)

Domain: [E15](#) Identifier Assignment

Range: [E41](#) Appellation

Subproperty of: [E7](#) Activity. [P16](#) used specific object (was used for): [E70](#) Thing

Quantification: (0:n,0:n)

Scope note: This property associates the event of assigning an instance of E42 Identifier to an entity, with the instances of E41 Appellation that were used as elements of the identifier.

Examples:

- On June 1, 2001 assigning the personal name heading “Guillaume, de Machaut, ca. 1300-1377” (E15) *used constituant* “Guillaume, de Machaut” (E82 Actor Appellation)
- On June 1, 2001 assigning the personal name heading “Guillaume, de Machaut, ca. 1300-1377” (E15) *used constituant* “ca. 1300-1377” (E49 Time Appellation)

P143 joined (was joined by)

Domain: [E85](#) Joining
 Range: [E39](#) Actor
 Subproperty of: [E5](#) Event. [P11](#) had participant (participated in): [E39](#) Actor

Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the instance of E39 Actor that becomes member of a E74 Group in an E85 Joining.

Examples:

- The election of Sir Isaac Newton as Member of Parliament to the Convention Parliament of 1689 *joined* Sir Isaac Newton
- The inauguration of Mikhail Sergeyevich Gorbachev as leader of the Union of Soviet Socialist Republics (USSR) in 1985 *joined* Mikhail Sergeyevich Gorbachev

P144 joined with (gained member by)

Domain: [E85](#) Joining
 Range: [E74](#) Group
 Subproperty of: [E5](#) Event. [P11](#) had participant (participated in): [E39](#) Actor
 Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the instance of E74 Group of which an instance of E39 Actor becomes a member through an instance of E85 Joining.
 Although a Joining activity normally concerns only one instance of E74 Group, it is possible to imagine circumstances under which becoming member of one Group implies becoming member of another Group as well.

Examples:

- The election of Sir Isaac Newton as Member of Parliament to the Convention Parliament of 1689 *joined with* the Convention Parliament
- The inauguration of Mikhail Sergeyevich Gorbachev as Leader of the Union of Soviet Socialist Republics (USSR) in 1985 *joined with* the office of Leader of the Union of Soviet Socialist Republics (USSR)

P145 separated (left by)

Domain: [E86](#) Leaving
 Range: [E39](#) Actor
 Subproperty of: [E5](#) Event. [P11](#) had participant (participated in): [E39](#) Actor
 Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the instance of E39 Actor that leaves an instance of E74 Group through an instance of E86 Leaving.

Examples:

- The end of Sir Isaac Newton’s duty as Member of Parliament for the University of Cambridge to the Convention Parliament in 1702 *separated* Sir Isaac Newton
- George Washington’s leaving office in 1797 *separated* George Washington

P146 separated from (lost member by)

Domain: [E86](#) Leaving
Range: [E74](#) Group
Subproperty of: [E5](#) Event. [P11](#) had participant (participated in): [E39](#) Actor
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property identifies the instance of E74 Group an instance of E39 Actor leaves through an instance of E86 Leaving.

Although a Leaving activity normally concerns only one instance of E74 Group, it is possible to imagine circumstances under which leaving one E74 Group implies leaving another E74 Group as well.

Examples:

- The end of Sir Isaac Newton's duty as Member of Parliament for the University of Cambridge to the Convention Parliament in 1702 *separated from* the Convention Parliament
- George Washington's leaving office in 1797 *separated from* the office of President of the United States

P147 curated (was curated by)

Domain: [E87](#) Curation Activity
Range: [E78](#) Collection
Quantification: many to many, necessary (1,n:0,n)

Scope note: This property associates an instance of E78 Collection or collections with subject of a curation activity following some implicit or explicit curation plan.

Examples:

- The activities (E87) by the Benaki Museum *curated* the acquisition of dolls and games of urban and folk manufacture dating from the 17th to the 20th century, from England, France and Germany for the "Toys, Games and Childhood Collection (E78) of the Museum.
- The activities (E87) of the Historical Museum of Crete, Heraklion, Crete, *curated* the development of the permanent Numismatic Collection (E78).

P148 is identified by (identifies)

Domain: [E28](#) Conceptual Object
Range: [E75](#) Conceptual Object Appellation
Subproperty: [E1](#) CRM Entity. [P1](#) is identified by (identifies): [E41](#) Appellation
Quantification: many to many (0,n:0,n)

Scope note: This property identifies a name used specifically to identify an E28 Conceptual Object.

This property is a specialisation of *P1 is identified by (identifies)* is identified by.

Examples:

- The publication „Germanisches Nationalmuseum (GNM), Fuehrer durch die Sammlungen" (broschiert), Prestl 1995 (E73) *is identified by* ISBN 3-7913-1418-1 (E75)

Creation Date: 11-07-1998

Last Modified: 24-10-2003

The present version of the CIDOC CRM incorporates a series of amendments to version 3.2.1, submitted to ISO and accepted as Committee Draft ISO/CD 21127. These amendments were the result of a systematic exploration of the requirements for the intended scope of the CIDOC CRM as decided in summer 2001. This includes in particular documentation in Natural History, archaeology and the ability to communicate with traditional and Digital Libraries. These amendments have been developed and approved by the CIDOC CRM Special Interest Group, ISO/TC46/SC4/WG9 in a series of meetings together with various invited experts in the period from July 2001 to October 2003.

With this version, the cycle of amendments to extend the functionality of the CIDOC CRM ends. The development team felt that the task to cover the intended scope as outlined in July 2001 and the general functionality required by members of the team up to now has been successfully fulfilled. Further amendments should only concern editorial changes to improve the clarity of the text. Therefore, the modelling constructs of the CIDOC CRM are expected to undergo no changes from this version until the final International Standard.

With version 3.3.2, we have changed the format of the Definition of the CIDOC CRM. We present:

1. A general introduction to the model (as before)
2. The hierarchy of entities as an indented list (as before)
3. The hierarchy of properties as an indented list
4. The definition of each entity
5. The definition of each property.

We took out all cross-reference information, i.e. inherited properties, direct and inherited inverse references of properties at the range entity, as well as the indices to properties, alphabetically, by range and by domain. So this document remains the pure definition, whereas the full cross-referenced text will appear as an additional hypertext document, which will be semi-automatically generated. The reason for this change are: (1) the size of the cross-referenced document exceeds what one would normally print in one document. (2) the cross-referencing does not contribute to the definition. (3) Translators of the document are forced to manually trace the consistency of the cross-referencing, a nearly impossible task. The cross-referenced document is of course the only one, that allows for fully understanding the model by reading and for using it in conceptual modelling.

We further removed the references to the metamodel under which the CIDOC CRM was initially developed. Even though the use of this metamodel has contributed a lot to the rigidity of developing the CIDOC CRM, it seems to be of minor importance for the use of the Model itself. Moreover it needs reworking, and metamodelling is still not a standard procedure in conceptual modelling. Therefore the development team decided not to make it a part of the standard to become.

We present in the Annex the amendment history from version 3.2.1 on. This, together with the meeting minutes and the "issues list" on the CIDOC CRM home page, allows for tracing the correctness of this document with respect to the decisions of the development team.

Amendments to version 3.3

In the Second Joint Meeting of ISO/TC46/SC4/WG9 and CIDOC CRM SIG the following has been decided: 3, new entities and 14 new properties have been declared, domain of 3 properties and range of 2 properties was changed and 1 property renamed

1) New Entities and their properties

- E78 Collection is curated by (curates): Actor
- E79 Part Addition added to (was augmented by): Physical Man-Made Thing
- E79 Part Addition added (was added by): Physical Thing
- E80 Part Removal removed from (was diminished by): Physical Man-Made Thing
- E80 Part Removal removed (was removed by): Physical Thing

2) New properties

- E2 Temporal Entity. removed (was removed by): Temporal Entity
- E2 Temporal Entity. equal in time: Temporal Entity
- E2 Temporal Entity. finishes (finished-by): Temporal Entity
- E2 Temporal Entity. starts (started-by): Temporal Entity
- E2 Temporal Entity. during (includes): Temporal Entity
- E2 Temporal Entity. overlaps in time (overlapped-by in time): Temporal Entity
- E2 Temporal Entity. meets in time (met-by in time): Temporal Entity
- E2 Temporal Entity. before (after): Temporal Entity
- E53 Place overlaps. with: E53 Place
- E53 Place borders. with: E53 Place

3) The Property:

- E19 Physical Object. has former or current location (is former or current location of): Place has been redirected to:
- E18 Physical Thing. has former or current location (is former or current location of): Place

4) The Property:

- E19 Physical Object. has current permanent location (is current permanent location of): Place has been redirected to:
- E18 Physical Thing. has current permanent location (is current permanent location of): Place

5) The Property:

- E19 Physical Object. has current location (currently holds): Place has been redirected to:
- E18 Physical Thing. has current location (currently holds): Place

6) The Property:

- E7 Activity. was motivation for (motivated): Conceptual Object has been redirected to:
- E7 Activity. was motivation for (motivated): Man-Made Thing

7) The Property:

- E7 Activity. motivated the creation of (was created for): Conceptual Object has been redirected and changed to:
- E7 Activity. motivated the creation of (was created because of): Man-Made Thing

8) The property “P33 used specific technique” was declared as subproperty of “P15 took into account”

9) The property “P111 added to” was declared as subproperty of “P31 has modified”

10) The property “P113 removed from” was declared as subproperty of “P31 has modified”

11) Scope note for Actors Hierarchy, Actor and Title have been revised.

12) Scope notes for properties have been added.

Amendments to version 3.3.1

In the 3rd joined meeting of the CIDOC Special Interest Group and ISO/TC46//SC4/WG9 the following have been decided: 1 new entity and 5 new properties have been declared, domain of 4 properties was changed and 1 property renamed, 1 entity has been deleted, 7 entities was renamed.

1) New Entities and its properties

E81 Transformation resulted in (was result on): Persistent Item

E81 Transformation transformed (was transformed by): Persistent Item

2) New properties

E7 Activity. used general object (was used for): Type

E11 Modification. employed (was employed by): Material

E55 Type. has broader term (has narrower term): Type

3) The Property:

E19 Physical Object. has former or current keeper (is former or current keeper of): Actor
has been redirected to:

E18 Physical Thing. has former or current keeper (is former or current keeper of): Actor

4) The Property:

E19 Physical Object. has keeper (is current keeper of): Actor
has been redirected to:

E18 Physical Thing. has keeper (is current keeper of): Actor

5) The Property:

E19 Physical Object. has former or current owner (is former or current owner of): Actor
has been redirected to:

E18 Physical Thing. has former or current owner (is former or current owner of): Actor

6) The Property:

E19 Physical Object. has owner (is current owner of): Actor
has been redirected to:

E18 Physical Thing. has owner (is current owner of): Actor

7) The Property:

E7 Activity. used object (was used for): Physical Object
has been renamed to:

E7 Activity. used specific object (was used for): Physical Object

8) The entity

E76 Gender and the property P61 has gender
have been deleted

9) 7 entities has been renamed:

E8 Acquisition

E8 Acquisition

E11 Modification

E11 Modification

E12 Production

E12 Production

E16 Measurement

E16 Measurement

E65 Conceptual Creation

E65 Creation

E66 Formation

E66 Formation

E77 Existence

E77 Persistent Item

Amendments to version 3.3.2

In the 3th joined meeting of the CIDOC Special Interest Group and ISO/TC46//SC4/WG9 the following have been decided: 2 new entities and 12 new properties have been declared, 1 entity has been renamed, domain of 4 properties was changed, range of 8 properties was changed, 6 properties renamed, 7 properties has been deleted.

Note: a typing mistake was corrected in item number 17 of the list on 16/01/2008.

The property:

E9 Move. P27 moved from (vacated): E53 Place
has been renamed to :

E9 Move. P26 moved from (was origin of): E53 Place

This was corrected to:

The property:

E9 Move. P27 moved from (vacated): E53 Place
has been renamed to :

E9 Move. P27 moved from (was origin of): E53 Place

1) New Entities:

E82 Actor Appellation.

It was declared as subclass of E41 Appellation

E83 Type Creation.

It was declared as subclass of E65 Creation

2) New properties:

E23 Information Carrier. P128 is carried of (is materialized by): E73 Information Object

E73 Information Object. P129 is about (is subject of): E1 CRM Entity

It was declared as subproperty of

E28 Conceptual Object. P67 refers to (is referred to by): E1 CRM Entity

E70 Thing. P130 shows features of (features are also found on): E70 Thing
(kind of similarity: Type)

It was declared as superproperty of

E33 Linguistic Object. P73 has translation (is translation of): E33 Linguistic Object

E4 Period. P132 overlaps with: E4 Period

E4 Period. P133 is separated from: E4 Period

E7 Activity. P134 continued (was continued by): E7 Activity

It was declared as subproperty of

E7 Activity. P15 (was influenced by (influenced): E7 Activity

E83 Type Creation. P135 created type (was created by): E55 Type.

It was declared as subproperty of

E65 Creation. P94 has created (was created by): E28 Conceptual Object

E83 Type Creation. P136 was based on (supported type creation): E1 CRM Entity
(in the taxonomic role: E55 Type)

It was declared as subproperty of

E7 Activity. P15 was influenced by (influenced): E1 CRM Entity.

E55 Type. P137 is exemplified by (exemplifies): E1 CRM Entity
(in the taxonomic role: E55 Type)

E36 Visual Item. P138 visualizes (has visualization): E1 CRM Entity,

It was declared as subproperty of
E28 Conceptual Object. P67 refer to (is referred to by): E1 CRM Entity

E41 Appellation. P139 also represented by: E41 Appellation

3) The entity E23 Iconographic Object has been renamed to E23 Information Carrier

4) The domain of the following properties was changed:

The property:

E18 Physical Thing. P43 has dimension (is dimension of): E54 Dimension
has been redirected to:

E70 Thing. P43 has dimension (is dimension of): E54 Dimension.

The property:

E28 Conceptual Object. P67 refers to (is referred to by): E1 CRM Entity
has been redirected to:

E73 Information Object. P67 refers to (is referred to by): E1 CRM Entity

The property:

E18 Physical Thing. P54 has current permanent location (is current permanent location of): E53 Place
has been redirected to:

E19 Physical Object. P54 has current permanent location (is current permanent location of): E53 Place

The property:

E18 Physical Thing. P55 has current location (currently holds): E53 Place
has been redirected to:

E19 Physical Object. P55 has current location (currently holds): E53 Place

5) The ranges of the following properties were changed:

The property:

E16 Measurement. P39 measured (was measured by): E18 Physical Thing
has been redirected to:

E16 Measurement. P39 measured (was measured by): E70 Thing

The property:

E7 Activity. P16 used specific object (was used for): E19 Physical Object
has been redirected to:

E7 Activity. P16 used specific object (was used for): E70 Thing

The property:

E8 Acquisition. P24 transferred title of (changed ownership through): E19 Physical Object
has been redirected to:

E8 Acquisition. P24 transferred title of (changed ownership through): E18 Physical Thing

The property:

E5 Event. P12 occurred in the presence of (was present at): E70 Thing
has been redirected to:

E5 Event. P12 occurred in the presence of (was present at): E77 Persistent Item

7) The property:

E7 Activity. P15 took into account (was taken into account by): E77 Persistent Item
has been renamed and redirected to:

E7 Activity. P15 was influenced by (influenced): E1 CRM Entity

8) The property:

E7 Activity. P17 was motivation for (motivated): E71 Man-Made Thing
has been renamed and redirected to:

E7 Activity. P17 was motivated by (motivated): E1 CRM Entity

9) The property:

E24 Physical Man-Made Thing. P62 depicts object (is depicted by): E18 Physical Thing
has been renamed and redirected to:

E24 Physical Man-Made Thing. P62 depicts (is depicted by): E1 CRM Entity

10) The property:

E74 Group. P107 had member (was member of): E39 Actor
has been renamed to :

E74 Group. P107 has current or former member (is current or former member of): E39 Actor

11) The property:

E52 Time-Span. P81 at least covering: E61 Time Primitive
has been renamed to :

E52 Time-Span. P81 ongoing throughout: E61 Time Primitive

12) The property:

E52 Time-Span. P82 at most within: E61 Time Primitive
has been renamed to :

E52 Time-Span. P82 at some time within: E61 Time Primitive

13) The following properties was deleted:

E3 Condition State. P6 falls within (contains): E3 Condition State

E7 Activity. P18 motivated the creation of (was created because of): E71 Man-Made Thing

E21 Person. P60 is member of: E40 Legal Body

E24 Physical Man-Made Thing. P63 depicts event (is depicted by): E5 Event

E24 Physical Man-Made Thing. P64 depicts concept (is depicted by): E55 Type

E28 Conceptual Object. P66 refer to concept (is referred to by): E55 Type

E52 Time-Span. P85 consists of (forms part of): E52 Time-Span

14) The property:

E5 Event. P11 had participants (participated in): E39 Actor
has been renamed to :

E5 Event. P11 had participant (participated in): E39 Actor

15) The property:

E7 Activity. P21 had as general purpose (was purpose of): E55 Type
has been renamed to :

E7 Activity. P21 had general purpose (was purpose of): E55 Type

16) The property:

E9 Move. P26 moved to (occupied): E53 Place
has been renamed to :

E9 Move. P26 moved to (was destination of): E53 Place

17) The property:

E9 Move. P27 moved from (vacated): E53 Place
has been renamed to :

E9 Move. P27 moved from (was origin of): E53 Place

18) The property:

E15 Identifier Assignment. P37 assigns (is assigned by): E42 Object identifier
has been renamed to :

E15 Identifier Assignment. P37 assigned (was assigned by): E42 Object identifier

19) The property:

E15 Identifier Assignment. P38 deassigns (is deassigned by): E42 Object identifier
has been renamed to :

E15 Identifier Assignment. P38 deassigned (was deassigned by): E42 Object identifier

20) The property:

E19 Physical Object. P48 preferred identifier is (is preferred identifier of): E42 Object identifier
has been renamed to :

E19 Physical Object. P48 has preferred identifier (is preferred identifier of): E42 Object identifier

21) The property:

E32 Authority Document. P71 contains (is part of): E55 Type
has been renamed to :

E32 Authority Document. P71 lists (is listed in): E55 Type

21) The property:

E39 Actor. P76 has contact points (provides access to): E51 Contact Point
has been renamed to :

E39 Actor. P76 has contact point (provides access to): E51 Contact Point

22) The property:

E52 Time-Span. P83 had at least duration: E54 Dimension
has been renamed to :

E52 Time-Span. P83 had at least duration (was minimum duration of): E54 Dimension

23) The property:

E52 Time-Span. P84 had at most duration: E54 Dimension

has been renamed to :

E52 Time-Span. P84 had at most duration (was maximum duration of): E54 Dimension

24) The property:

E54 Dimension. P90 value: E60 Number
has been renamed to :

E54 Dimension. P90 has value: E60 Number

25) The property:

P15 was influenced by (influenced)

was declared as superproperty of

P16 used specific object (was used for)

P17 was motivated by (motivated)

P19 was intended use of (was made for)

P20 had specific purpose (was purpose of)

P134 continued (was continued by)

26) The property:

P11 had participant (participated in)

was declared as subproperty of

P12 occurred in the presence of (was present at)

27) The entity

E72 Legal Object was declared as subclass of E70 Thing

28) The entity

E55 Type was declared as subclass of E28 Conceptual Object

29) All uses of the word “link” as synonym for “property” have been replaced by the term “property”

The following changes for internal consistency have been proposed, but they have not been decided in the Copenhagen meeting. They are incorporated in this document, in expectation of a positive decision:

1) The property:

E40 Legal Body. consists of (belongs to): E40 Legal Body

was deleted (new issue 104).

2) The property

P105.2 has note: E62 String
was deleted (new issue 106).

3) The property:

P33 used specific technique
was declared as subproperty of
P12 occurred in the presence of (was present at)

4) New property

E39 Actor. P131 is identified by (identifies): E82 Actor Appellation.
It was declared as subproperty of
E1 CRM Entity. P1 is identified by (identifies): E41 Appellation

Amendments to version 3.4

In the 5th joined meeting of the CIDOC Special Interest Group and ISO/TC46//SC4/WG9 the following have been decided: 3 entities were deleted and 1 new entity was declared, 24 properties has been renamed, domain of 1 property was changed, and range of 1 property was changed.

Note: a typing mistake was corrected in item number 14 of the list on 16/01/2008.

The property

E79 Part Removal. P112 removed from (was diminished by): E24 Physical Man-Made Thing
has been renamed to :

E79 Part Removal. P112 diminished (was diminished by): E24 Physical Man-Made Thing

This was corrected to:

The property

E80 Part Removal. P112 removed from (was diminished by): E24 Physical Man-Made Thing
has been renamed to :

E80 Part Removal. P112 diminished (was diminished by): E24 Physical Man-Made Thing

1) The entity:

E23 Information Carrier
was deleted.

2) New entity

E84 Information Carrier
was declared.

3) The property

E8 Acquisition. P22 transferred title to (acquired title to): E39 Actor
has been renamed to :
E8 Acquisition. P22 transferred title to (acquired title through): E39 Actor

4) The property

E10 Transfer of Custody. P28 custody surrendered by (surrendered custody): E39 Actor
has been renamed to :
E10 Transfer of Custody. P28 custody surrendered by (surrendered custody through): E39 Actor

5) The property

E10 Transfer of Custody. P29 custody received by (received custody): E39 Actor
has been renamed to :
E10 Transfer of Custody. P29 custody received by (received custody through): E39 Actor

- 6) The property
 E10 Transfer of Custody. P30 transferred custody of (custody changed by): E19 Physical Object
 has been redirected and renamed to :
 E10 Transfer of Custody. P30 transferred custody of (custody transferred through): E18 Physical Thing
- 7) The property
 E16 Measurement. P40 observed dimension (was observed): E54 Dimension
 has been renamed to :
 E16 Measurement. P40 observed dimension (was observed in): E54 Dimension
- 8) The property
 E19 Physical Object. P58 has section definition (defines section): E46 Section Definition
 has been redirected to:
 E18 Physical Thing. P58 has section definition (defines section): E46 Section Definition
- 9) The property
 E52 Time-Span. P79 begins at qualify: E62 String
 has been renamed to :
 E52 Time-Span. P79 beginning is qualified by: E62 String
- 10) The property
 E52 Time-Span. P80 ends at qualify: E62 String
 has been renamed to :
 E52 Time-Span. P80 end is qualified by: E62 String
- 11) The property
 E54 Dimension. P91 unit: E58 Measurement Unit
 has been renamed to :
 E54 Dimension. P91 has unit (is unit of): E58 Measurement Unit
- 12) The property
 E78 Collection. P109 is curated by (curates): E39 Actor
 has been renamed to :
 E78 Collection. P109 has current or former curator (is current or former curator of): E39 Actor
- 13) The property
 E79 Part Addition. P110 added to (was augmented by): E24 Physical Man-Made Thing
 has been renamed to :
 E79 Part Addition. P110 augmented (was augmented by): E24 Physical Man-Made Thing
- 14) The property
 E80 Part Removal. P112 removed from (was diminished by): E24 Physical Man-Made Thing
 has been renamed to :
 E80 Part Removal. P112 diminished (was diminished by): E24 Physical Man-Made Thing
- 15) The property
 E2 Temporal Entity. P114 equal in time: E2 Temporal Entity
 has been renamed to :
 E2 Temporal Entity. P114 is equal in time to: E2 Temporal Entity
- 16) The property
 E2 Temporal Entity. P115 finishes (finished-by): E2 Temporal Entity
 has been renamed to :
 E2 Temporal Entity. P115 finishes (is finished by): E2 Temporal Entity
- 17) The property
 E2 Temporal Entity. P116 starts (started-by): E2 Temporal Entity
 has been renamed to :
 E2 Temporal Entity. P116 starts (is started by): E2 Temporal Entity

- 18) The property
 E2 Temporal Entity. P117 during (includes): E2 Temporal Entity
 has been renamed to :
 E2 Temporal Entity. P117 occurs during (includes): E2 Temporal Entity
- 19) The property
 E2 Temporal Entity. P118 overlaps in time (overlapped-by in time): E2 Temporal Entity
 has been renamed to :
 E2 Temporal Entity. P118 overlaps in time with (is overlapped in time by): E2 Temporal Entity
- 20) The property
 E2 Temporal Entity. P119 meets in time (met-by in time): E2 Temporal Entity
 has been renamed to :
 E2 Temporal Entity. P119 meets in time with (is met in time by): E2 Temporal Entity
- 21) The property
 E2 Temporal Entity. P120 before (after): E2 Temporal Entity
 has been renamed to :
 E2 Temporal Entity. P120 occurs before (occurs after): E2 Temporal Entity
- 22) The property
 E81 Transformation. P123 resulted in (was resulted on): E77 Persistent Item
 has been renamed to :
 E81 Transformation. P123 resulted in (resulted from): E77 Persistent Item
- 23) The property
 E7 Activity. P125 used general object (was used for): E55 Type
 has been renamed to :
 E7 Activity. P125 used object of type (was type of object used in): E55 Type
- 24) The property
 E11 Modification. P126 employed (was employed by): E57 Material
 has been renamed to :
 E11 Modification. P126 employed (was employed in): E57 Material
- 25) The property
 E23 Information Carrier. P128 is carried of (is materialized by): E73 Information Object
 has been redirected and renamed to :
 E24 Physical Man-Made thing. P128 carries (is carried by): E73 Information Object
- 26) The property
 E36 Visual Item. P138 visualizes (has visualization): E1 CRM Entity
 has been renamed to :
 E36 Visual Item. P138 represents (has representation): E1 CRM Entity
- 27) The property
 E41 Appellation. P139 also represented: E41 Appellation
 has been renamed to :
 E41 Appellation. P139 has alternative form: E41 Appellation
- 28) The property
 P3 has note
 has been declared as superproperty of
 P79 beginning is qualified by
 P80 end is qualified by
- 29) The property
 P11 had participant (participated in)

was declared as superproperty of
P14 carried out by (performed)
P96 by mother (gave birth)
P99 dissolved (was dissolvedby)

30) The property
P12 occurred in the presence of (was present at)
was declared as superproperty of
P11 had participant (participated in)
P16 used specific object (was used for)
P25 moved (moved by)
P31 has modified (was modified by)
P33 used specific technique (was used by)
P92 brought into existence (was brought into existence by)
P93 took out of existence (was taken out of existence by)

31) The property:
P15 was influenced by (influenced)
was declared as superproperty of
P16 used specific object (was used for)
P17 was motivated by (motivated)
P33 used specific technique (was used by)
P134 continued (was continued by)
P136 was based on (supported type creation)

32) The property:
E40 Legal Body. consists of (belongs to): E40 Legal Body
was deleted

33) The property
P105.2 has note: E62 String
was deleted

34) New property
E39 Actor. P131 is identified by (identifies): E82 Actor Appellation.
It was declared as subproperty of
E1 CRM Entity. P1 is identified by (identifies): E41 Appellation

Amendments to version 3.4.1

Introduction and Scope Notes for classes E21 – E84 have been revised, and 2 new paragraphs were inserted (CIDOC CRM Class Declarations and CIDOC CRM Property Declarations).

Amendments to version 3.4.2

Scope Notes for all entities and properties have been revised, 2 new properties was declared, 1 property was redirected and two properties was renamed:

1) New property
E13 Attribute Assignment. P140 assigned attribute to (was attributed by): E1 CRM Entity
It was declared as superproperty of
E14 Condition Assessment. P34 concerned (was assessed by): E18 Physical Thing
E15 Identifier Assignment. P36 registered (was registered by): E19 Physical Object
E16 Measurement. P39 measured (was measured by): E70 Thing

E17 Type Assignment. P41 classified (was classified by): E1 CRM Entity

2) New property

E13 Attribute Assignment. P141 assigned (was assigned by): E1 CRM Entity

It was declared as superproperty of

E14 Condition Assessment. P35 has identified (identified by): E3 Condition State

E15 Identifier Assignment. P37 assigned (was assigned by): E42 Object Identifier

E15 Identifier Assignment. P38 deassigned (was deassigned by): E42 Object Identifier

E16. Measurement. P40 observed dimension (was observed in): E54 Dimension

E17 Type Assignment. P42 assigned (was assigned by): E55 Type

3) The Property:

E6 Destruction. P13 destroyed (was destroyed by): E19 Physical Object

has been redirected to:

E6 Destruction. P13 destroyed (was destroyed by): E18 Physical Thing

4) The property:

E8 Acquisition. P23 transferred title from (surrendered title of): E39 Actor

has been renamed to:

E8 Acquisition. P23 transferred title from (surrendered title through): E39 Actor

5) The property:

E8 Acquisition. P24 transferred title of (changed ownership by): E18 Physical Thing

has been renamed to:

E8 Acquisition. P24 transferred title of (changed ownership through): E18 Physical Thing

Amendments to version 3.4.9

The property

105.1 has type:E55 Type

was deleted

Amendments to version 4.2

(This amendments list has been added in version 4.2.2 on 11/03/2008 because it was omitted in the due version 4.2)

In the 11th joint meeting of the CIDOC CRM SIG and ISO/TC46/SC4/WG9 which took place in Zagreb Croatia on May 25th and 27th, 2005 the following decisions have been taken:

1) Stuff has been renamed in Thing, thus

E18 Physical Stuff

has been renamed to:

E18 Physical Thing

E24 Physical Man-Made Stuff

has been renamed to:

E24 Physical Man-Made Thing

E70 Stuff

has been renamed to:

E70 Thing

E71 Man-Made Stuff

has been renamed to:

E71 Man-Made Thing

2) From compounds with Event the word Event has been removed, thus

E8 Acquisition Event
has been renamed to:
E8 Acquisition

E11 Modification Event
has been renamed to:
E11 Modification

E12 Production Event
has been renamed to:
E12 Production

E16 Measurement Event
has been renamed to:
E16 Measurement

E65 Creation Event
has been renamed to:
E65 Creation

E66 Formation Event
has been renamed to:
E66 Formation

Amendments to version 4.2.1

In the 14th joined meeting of the CIDOC CRM SIG and ISO/TC46/SC4/WG9 which took place in Crete, Greece on October 23-27, 2006 the following decisions have been taken:

1. The domain of the properties

P32 used general technique (was technique of): E55 Type

P33 used specific technique (was used by): E29 Design or Procedure

has been changed from E11 Modification to E7 Activity

2. The scope note of E28 Conceptual Object has been changed

New scope note:

This class comprises non-material products of our minds and information produced by humans with or without using technical devices that have become objects of a discourse about their identity, circumstances of creation and historical implications.

Characteristically, instances of this class are created, invented or thought by someone, and then may be documented or communicated between persons. Instances of E28 Conceptual Object have the ability to exist on more than one particular carrier at the same time, such as papers, electronic signals, marks, audio media, paintings, photos, human memories, etc.

They cannot be destroyed as long as they exist on at least one carrier or in memory.

Their existence ends when the last carrier is lost. A greater distinction can be made between products having a clear identity, such as a specific text, or photographs, and the ideas and concepts shared and traded by groups of people.

Current scope note:

This class comprises non-material products of our minds, in order to allow for reasoning about their identity, circumstances of creation and historical implications.

Characteristically, instances of this class are created, invented or thought by someone, and then may be documented or communicated between persons. Instances of E28 Conceptual Object may be found on more than one particular carrier, such as papers, electronic signals, marks, audio media, paintings, photos, human memories, etc.

They cannot be destroyed as long as they exist on at least one carrier or in memory. Their existence ends when the last carrier is lost. A greater distinction can be made between products having a clear identity, such as a specific text, or photographs, and the ideas and concepts shared and traded by groups of people.

Amendments to version 4.2.2

Changes to entities:

E1 CRM Entity

In the second paragraph of the scope note, in the item numbered 1, the phrase “, and in particular by a preferred identifier” has been added.

The property P48 has preferred identifier (is preferred identifier of) moved from E19 Physical Object to E1 CRM Entity.

E3 Condition State

In the second paragraph of the scope note the “It” has been substituted by “An instance of this class”

E4 Period

The first and the last sentence of the 4th paragraph of the scope note has been changed.

From :

Artistic style may be modelled as E4 Period. There are two different conceptualisations of ‘artistic style’, defined either by physical features or by historical context. For example, “Impressionism” can be viewed as a period lasting from approximately 1870 to 1905 during which paintings with particular characteristics were produced by a group of artists that included (among others) Monet, Renoir, Pissarro, Sisley and Degas. Alternatively, it can be regarded as a style applicable to all paintings sharing the characteristics of the works produced by the Impressionist painters, regardless of historical context. The first interpretation is consistent with E4 Period, and the second defines morphological object types that fall under E55 Type.

There are two different conceptualisations of ‘artistic style’, defined either by physical features or by historical context. For example, “Impressionism” can be viewed as a period lasting from approximately 1870 to 1905 during which paintings with particular characteristics were produced by a group of artists that included (among others) Monet, Renoir, Pissarro, Sisley and Degas. Alternatively, it can be regarded as a style applicable to all paintings sharing the characteristics of the works produced by the Impressionist painters, regardless of historical context. The first interpretation is an E4 Period, and the second defines morphological object types that fall under E55 Type.

E29 Design or Procedure

“This class comprises documented plans for the execution of actions in order to achieve a result of a specific quality, form or contents. In particular it comprises plans for deliberate

human activities that result in the modification or production of instances of E24 Physical Thing.”

To:

“This class comprises documented plans for the execution of actions in order to achieve a result of a specific quality, form or contents. In particular it comprises plans for deliberate human activities that may result in the modification or production of instances of E24 Physical Thing.”

E33 Linguistic Object

A third paragraph added to the scope note text which is the following:

“The text of an instance of E33 Linguistic Object can be documented in a note by P3 has note: E62 String”

E41 Appellation

The Appellation became subclass of E28 Conceptual Object and super class of E51 Contact Point

E42 Identifier

The scope note changed

From:

“This class comprises codes assigned to objects in order to identify them uniquely within the context of one or more organisations.

Such codes are often known as inventory numbers, registration codes, etc. and are typically composed of alphanumeric sequences. The class E42 Object Identifier is not normally used for machine-generated identifiers used for automated processing unless these are also used by human agents. “

To:

“This class comprises codes assigned to instances of E1 CRM Entity in order to identify them uniquely and permanently within the context of one or more organisations. Such codes are often known as inventory numbers, registration codes, etc. and are typically composed of alphanumeric sequences. The class E42 Identifier is not normally used for machine-generated identifiers used for automated processing unless these are also used by human agents”

E74 Group

The scope note is changed

From

This class comprises any gatherings or organizations of two or more people that act collectively or in a similar way due to any form of unifying relationship

A gathering of people becomes an E74 Group when it exhibits organizational characteristics usually typified by a set of ideas or beliefs held in common, or actions performed together. These might be communication, creating some common artifact, a common purpose such as study, worship, business, sports, etc. Nationality can be modeled as membership in an E74 Group (cf. HumanML markup).

Examples:

- the impressionists
- the Navajo
- the Greeks
- the peace protestors in New York City on February 15 2003
- Exxon-Mobil

To:

This class comprises any gatherings or organizations of two or more people that act collectively or in a similar way due to any form of unifying relationship. In the wider sense this class also comprises

official positions which used to be regarded in certain contexts as one actor, independent of the current holder of the office, such as the president of a country.

A gathering of people becomes an E74 Group when it exhibits organizational characteristics usually typified by a set of ideas or beliefs held in common, or actions performed together. These might be communication, creating some common artifact, a common purpose such as study, worship, business, sports, etc. Nationality can be modeled as membership in an E74 Group (cf. HumanML markup). Married couples and other concepts of family are regarded as particular examples of E74 Group.

Examples:

- the impressionists
- the Navajo
- the Greeks
- the peace protestors in New York City on February 15 2003
- Exxon-Mobil
- King Solomon and his wives
- The President of the Swiss Confederation

P3 has note

The scope note is changed

From:

This property is a container for all informal descriptions about an object that **cannot** be expressed in terms of CRM constructs.

In particular it captures the characterisation of the item itself, its internal structures, appearance etc.

Like property *P2 has type (is type of)*, this property is a consequence of the restricted focus of the CRM. The aim is not to capture, in a structured form, everything that can be said about an item; indeed, the CRM formalism is not regarded as sufficient to express everything that can be said. Good practice requires use of distinct note fields for different aspects of a characterisation. The *P2 has type (is type of)* property of *P3 has note* allows differentiation of specific notes, e.g. “construction”, “decoration” etc.

An item may have many notes, but a note is attached to a specific item.
